XX
PT Labelling of an oligonucleotide - useful for detecting genes.
XX
PS Example 1; Page 7; 10pp; Japanese.
XX
CC A method has been developed for labelling an oligonucleotide having a
CC repeated sequence of (XY)n (where X and Y consists of a combination of
CC adenine and thymine or uracil or guanine and cytosine, and n is an
CC integer of 1 or more) at the 3'-terminal side in which the repeated
CC sequence is added and extended using a labelled body of the nucleotide
CC constituting the repeated sequence and a DNA polymerase lacked in 5' to
CC 3' exonuclease activity. The method can be used for detecting a gene. The
CC method can detect a gene in a sensitivity up to ten times higher than
CC prior art methods. The present sequence represents a primer used in an
CC example from the present invention

CC This sequence represents a primer of the invention. The invention relates
CC to sequences of at least two nucleotides of formula: (X)m5'-(alpha)n-beta
CC -N3'; or (X)m5'-(gamma)k-delta-N3'; where X = a labelled compound and/or
CC a nucleotide with voluntary sequence; m = 0 or 1; alpha = thymine; n =
CC natural number indicating the repetition of alpha; beta, delta = V or N;
CC V = adenine, guanine or cytosine; N = adenine, guanine, cytosine or
CC thymine; gamma = thymine; k = natural number of 3 or over indicating the
CC repetition of gamma, in which thymine expressed by gamma is composed of
CC 1/3 or less of adenine, guanine and/or cytosine. The new nucleotides are
CC useful as primers for RT-PCR and determination of base sequences. The new
CC sequences allow for reproductive and highly efficient analysis of gene
CC sequences

PT Functionalized nanocrystal carrying polynucleotide, used for detecting
PT target analyte, forms dendrimers with complementary nanocrystals to
PT amplify the fluorescent signal.
XX
PS Example 3; Page 68; 72pp; English.
XX
CC The present invention relates to functionalised nanocrystals for use in
CC nonisotopic detection systems for biomolecules e.g. nucleic acids,
CC proteins, lipids or drugs. The nanocrystals have polynucleotide strands

CC attached to their surfaces with one end of the polynucleotide extending
CC outwardly from the nanocrystal. The present sequence is one such
CC polynucleotide. These nanocrystals are used with a second series of
CC nanocrystals, which have polynucleotides complementary to the first
CC polynucleotides, so that the respective complementary strands hybridise
CC to each other and form a dendrimer. This dendrimer produces a signal
CC which can then be detected e.g. fluorescence. The present sequence is
CC composed mainly of Adenine bases. This sequence may therefore be used
CC with a polynucleotide composed mainly of Thymine bases (AAA58386)

PT Therapeutic composition containing antisense oligonucleotides that
PT include arabinose sugars, particularly for inhibiting viral replication.
XX
PS Example 1; Page 29; 91pp; English.
XX
CC The invention relates to a new composition for selective, sequence-
CC specific inhibition of gene transcription and expression in a host. The
CC composition comprises oligonucleotides containing arabinose sugars that
CC can hybridise to either a a single-stranded (ss) RNA to induce RNase H
CC cleavage activity, or to a DNA/DNA or DNA/RNA duplex to form a triple
CC helix, thereby inhibiting DNA replication and/or transcription. The
CC oligoarabinonucleotides are used for antisense inhibition of gene
CC expression or to prevent DNA replication, or reverse transcription of RNA
CC by retroviruses. The compositions are therefore particularly used to
CC inhibit retroviral replication. The oligoarabinonucleotides can also be
CC used, in combination with RNase H, as reagents for sequence-specific
CC cleavage or RNA mapping, and additionally for the study and control of
CC gene expression in cells. The oligoarabinonucleotides have excellent
CC affinity for RNA, increased resistance to nucleases and show little if
CC any non-specific binding to cellular or serum proteins. They target ss
CC RNA, but not complementary ss DNA, so may be useful for targetting
CC retroviral genomic RNA to inhibit the early stages of viral replication.
CC Oligoarabinonucleotides containing pyrimidine bases form triple helices
CC with significantly higher thermal stability than those produced by normal
CC oligonucleotides. Sequences AAZ87160-Z87164 represent
CC oligoarabinonucleotides containing beta-D-arabinose used in an
CC exemplification of the present invention

XX
CC   The patent discloses novel secreted factor protein encoded by clone
CC   P00188_D12. The secreted factor is differentially expressed in certain
CC   disease states. Secreted protein, its antibodies, antagonists or
CC   compositions comprising them are useful in the diagnosis and treatment of
CC   cardiac diseases such as congestive heart failure, myocarditis,
CC   hypertrophic cardiomyopathy, angina pectoris, myocardial infarction,
CC   cardiac arrhythmia, arteriosclerosis, kidney diseases such as acute renal
CC   failure, renal glucosuria, renal infarction, nephrogenic diabetes
CC   insipidus, polycystic kidney disease, hereditary nephritis and
CC   inflammatory diseases such as asthma, autoimmune diabetes, tumour
CC   angiogenesis, rheumatoid arthritis, osteoarthritis, toxic shock syndrome,
CC   asthma, stroke, neural trauma, psoriasis, cerebral malaria, osteoporosis,
CC   Crohn's disease, ulcerative colitis, Alzheimer's disease. Secreted
CC   protein DNA is useful in antisense-mediated gene inhibition and in gene
CC   therapy. An array comprising one or more oligonucleotides complementary
CC   to reference RNA or DNA encoding the secreted factor is useful for
CC   detecting cardiac, kidney and inflammatory disease. The present DNA
CC   sequence is an oligonucleotide which is used in the preparation of a
CC   normalised cDNA library containing secreted factor DNAs. The normalised
CC   cDNA libraries are used in the identification of differentially expressed

XX
CC   The present invention relates to an array of proteins (antibody mimics)
```

```
CC   comprising a fibronectin type III domain having a randomised loop, a
CC   randomised beta-sheet, or their combination, and has the capacity to bind
CC   to a compound that is not bound by a corresponding naturally- occurring
CC   fibronectin, immobilised onto a solid support. The antibody mimics is
CC   useful for detecting a compound preferably a protein, in a biological
CC   sample. It is also useful to detect one or more different analytes
CC   simultaneously in a sample. Hence is useful for diagnostic purposes. It
CC   is also useful for the purpose of designing proteins capable of binding
CC   to virtually any compound of interest. The present sequence is an
CC   oligonucleotide A18-2PEG linker used in an exemplification of the
CC   invention

PT   Producing binary sequence tags, useful for analyzing nucleic acid
PT   sequence tags, gene expression or gene-expression patterns, involves
PT   generating nucleic acid fragments, which are mixed with offset adaptors
PT   and adaptor-indexers.
XX
PS   Disclosure; Page 101; 101pp; English.
XX
CC   The present invention describes a method of producing binary sequence
CC   tags from nucleic acid fragments in a sample, involving incubating the
CC   sample with cleaving reagents, mixing offset adaptors with the sample,
CC   incubating with more cleaving reagents and mixing the sample with adaptor
CC   -indexers where the adaptors are coupled to binary sequence tags. The
CC   method is useful in sequence analysis, including analysis and comparison
CC   of gene expression, nucleic acid samples and genomes

PT   Amplifying and detecting RNA derived from a population of cells by
PT   employing a primer that contains an RNA polymerase promoter in a
PT   polymerase chain reaction.
XX
PS   Example 3; Fig 1; 29pp; English.
XX
CC   The invention relates to methods and kits for amplification of mRNA using
CC   a primer in PCR that contains an RNA polymerase (RNAP) promoter. The
CC   invention provides methods for amplification and detection of RNA derived
CC   from a population of cells, preferably eukaryotic cells and most
CC   preferably mammalian cells, which methods preserve fidelity with respect
CC   to sequence and transcript representation and additionally enable
CC   amplification of extremely small amounts of mRNA. The method and kit are
CC   useful for amplifying and detecting RNA derived from a population of
CC   cells, especially eukaryotic cells like mammals. The RNAs generated are
CC   useful for profiling gene expression in different populations of cells.
CC   The present sequence is a mRNA fragment used in 3' end PCR/IVT (in vitro
CC   transcription) method of the invention

XX
CC The present invention relates to a method for stimulating an immune
CC response. The method comprises administering an immunostimulatory nucleic
CC acid to a non-rodent subject in sufficient quantity to stimulate an
CC immune response. The present sequence is one such immunostimulatory
CC nucleic acid. The immunostimulatory nucleic acids can be pyrimidine rich
CC (py-rich) or thymidine (T) rich. The method is used to vaccinate subjects
CC against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae
CC and/or orthomyxoviridae), bacterial antigens (e.g. toxoplasma,
CC haemophilus, campylobacter, clostridium, Escherichia coli and/or
CC staphylococcus), fungal antigens and/or parasitic antigens. The method is
CC also useful for preventing cancer, asthma, infectious disease, allergy or
CC immune deficiency. The present sequence can also be used to redirect a
CC Th2 to a Th1 immune response and to activate immune cells. Note: the
CC present sequence may have a phosphorothioate backbone

PT Novel secreted factor encoded by clone P00210D09 useful for diagnosing,
PT treating and/or preventing various cardiac, renal and inflammatory
PT diseases.
XX
PS Example 1; Page 41; 69pp; English.
XX
CC The present sequence corresponds to polylinker DNA of the phagemid vector
CC pCR2.1. It was used in the construction of a normalised rat cDNA library,
CC which was used in an example demonstrating differential expression of a
CC rat gene referred to as clone P00210D09. The invention relates to a
CC polypeptide comprising a sequence of at least 80% identity to residues 22
CC -122 of the present sequence, or a sequence encoded by a nucleic acid
CC hybridising under stringent conditions to the complement of the coding
CC region comprising 1031 nucleotides, and having at least one biological
CC activity of the polypeptide encoded by clone P00210D09. The polypeptides
CC and polynucleotides of the invention are useful for the treatment of
CC cardiac, renal and inflammatory diseases. The polynucleotides are useful
CC in antisense mediated gene inhibition and in gene therapy. The
CC polypeptides are useful in assays for identifying lead compounds that may
CC be used as therapeutic agents in the treatment of cardiac, kidney or
CC inflammatory diseases

CC The invention relates to inhibiting angiogenesis in a subject, comprising
CC administering at least one antiangiogenic nucleic acid molecule. Also
CC included is a kit comprising a first container housing the antiangiogenic
CC nucleic acids, and instructions for administering them to a subject
CC having a condition characterised by unwanted angiogenesis. The method is
CC useful for inhibiting angiogenesis associated with solid tumour growth,
CC tumour metastasis, precancerous lesion, rheumatoid arthritis, psoriasis,
CC diabetic retinopathy, retinopathy of prematurity, macular degeneration,
CC corneal graft rejection, neovascular glaucoma, retrolental fibroplasia,
CC rubeosis, Osler-Webber Syndrome, myocardial angiogenesis, plaque
CC neovascularisation, telangiectasia, haemophiliac joints, angiofibroma,
CC wound granulation, intestinal adhesions, atherosclerosis, scleroderma and

CC hypertrophic scars. The present sequence is an antiangiogenic nucleic
CC acid of the invention

PT Novel polypeptide having cytotoxic activity obtainable from Aplysia,
PT useful for destroying tumors, for identifying novel targets for the
PT development of anti-tumor agents, and as specific ion channel modulators.
XX
PS Example 5; Page 37; 87pp; English.
XX
CC The present invention relates to novel polypeptides having cytotoxic
CC activity obtainable from sea hare Aplysia. Sequences of the invention are
CC useful for the manufacture of cytotoxic agents against apoptosis-
CC resistant cells, where the agents are useful for diagnosis, prevention,
CC treatment of disorders associated with dysfunctions of GAP-SH3 binding
CC protein, factors for generating or detoxifying reactive oxygen species
CC (ROS) and factors for blocking and/or by-passing of caspases. They are
CC useful for tumour therapy. Cytotoxic proteins of the invention are useful
CC for destroying tumours and/or selectively killing cells in tissues, for
CC identifying novel targets for the development of pharmaceutical agents,
CC preferably anti-tumour agents and as specific ion channel modulators,
CC e.g., blockers or openers for therapy, diagnostic or research. They are
CC useful for the diagnosis and therapy of hyperproliferative diseases,
CC preferably tumours, e.g., leukaemia, carcinoma, sarcoma and melanoma.
CC They are also useful for development of drugs for the treatment of
CC degenerative diseases such as Alzheimer's disease, Parkinson's disease,
CC arteriosclerosis, heart diseases, stroke and vascular diseases. The
CC present sequence is an oligonucleotide which is used for amplifying sea
CC hare cyplasin L DNA. This sequence is used in the exemplification of the
CC invention

PT   Increasing efficiency of second strand cDNA synthesis using terminal
PT   continuation model before performing further RNA amplification by RNA
PT   transcription.
XX
PS   Example 7; Page 80; 128pp; English.
XX
CC   This invention relates to a novel method for increasing the efficiency of
CC   second strand cDNA synthesis through a mechanism of terminal
CC   continuation. In the method an RNA molecule is obtained and a first
CC   primer is added that comprises a region that hybridises to a
CC   complementary region of the molecule before a second primer is added
CC   comprising at least one riboguanine at the 3' end of the primer. A first
CC   complementary nucleic acid molecule is synthesised, the RNA molecule and
CC   second primer are removed and a second complementary nucleic acid
CC   molecule is synthesised to form a second hybrid with an extension product
CC   of the third primer bound to the first complementary molecule. The method
CC   of the invention is useful for increasing the efficiency of second strand
CC   cDNA synthesis and may be used for linear amplification of genetic
CC   signals from histologically stained tissue. The present sequence
CC   represents a poly d(T) PCR primer used in the method of the invention

PT   Comparative detection of the amounts of RNA and DNA.
XX
PS   Disclosure; Page 9; 9pp; Japanese.
XX
CC   The present invention describes a method for the comparative detection of
CC   the amount of an RNA. The method comprises: (a) cDNAs obtained by
CC   transcribing respectively from at least two tissue RNAs are respectively
CC   fragmented by using a same restriction enzyme; (b) each different adaptor
CC   and a common adaptor are added to each of the cDNA fragments derived from
CC   the same or different tissues by the step (a); (c) the resultant adaptor-
CC   added cDNAs are mixed together; (d) an adaptor primer having the common
CC   sequence to said different adaptor and a gene-specific adaptor are used
CC   to amplify said adaptor-added cDNAs containing no region derived from
CC   polyadenylic acid of the mRNA before the addition of the adaptor among
CC   the adaptor-added cDNAs prepared by the step (b); (e) the ratios of the
CC   cDNA amounts are measured between the tissues; (f) the RNA is detected
CC   from the measured result; (g) each different adaptor and a common adaptor
CC   are added to each of the genomic DNA fragments derived from a same or
CC   different individuals; (h) the resultant adaptor-added genomic DNAs are
CC   mixed together; (i) the adaptor-added genomic DNAs are amplified by using
CC   an adaptor primer having the common sequence to the different adaptor and
CC   a sequence-specific adaptor; and (j) the ratios of the amplified amounts
CC   of the genomic DNAs are measured between the individuals. The method is
CC   used for the detection of the amounts of RNA and DNA. The present
CC   sequence represents an oligonucleotide which is used in the
CC   exemplification of the present invention

PT   of infectious disease e.g. Kuru syndrome and Creutzfeld-Jacob disease
PT   (CJD).
XX
PS   Example; Page 38; 96pp; English.
XX
CC   The invention relates to novel pyridylpyrimidine derivatives and methods
CC   of detecting prion infections and/or prion disease in an individual or in
CC   cells, cell cultures and/or cell lysates. The method involves adding at
CC   least one monoclonal or polyclonal antibody, oligonucleotide or pyridyl-
CC   pyrimidine derivative to the sample or in cells, cell cultures and/or
CC   cell lysates and detecting the activity of at least one human cellular
CC   protein kinases (e.g., FGF-R1 (also known as flg, Fl-1, Flt-2, b-FGFR),
CC   Tkt (also known as CCK-2, DDR-2 or EDDR; EC number 2.7.1.112), Abl (also
CC   known as c-abl), clk1, MKK7 (also known as SAPK1a, SAPKalpha), CDC2 (also
CC   known as CDK1), PRK), human cellular protein phosphatases such as PTP-SL
CC   (also known as MCP83) and PTP-zeta, the cellular signal transduction
CC   molecules HSP80 and GPIR-1. The invention is useful for regulating the
CC   production of prions in cells and in the manufacture of pharmaceutical
CC   composition for prophylaxis and/or treatment of infectious disease (e.g.
CC   Scrapie, chronic wasting disease (CWD), transmissible mink encephalopathy
CC   (TME), Creutzfeldt-Jacob disease (CJD), bovine spongiform encephalopathy
CC   (BSE), variant CJD, Gerstmann-Straussler-Scheinker syndrome (GSS), fatal
CC   familial insomnia (FFI), Kuru and Alpers syndrome, especially BSE, CJD,
CC   vCJD) or neurodegenerative diseases (e.g., Alzheimer's disease) in humans
CC   or ruminants. The present DNA sequence is a primer used to prepare
CC   radioactively labelled cDNA probes from RNA. This sequence is used in the
CC   exemplification of the invention

CC developing a non-allergic inflammatory disease an immunostimulatory

```
CC   nucleic acid for prevention or treatment of the disease. The method is
CC   useful for treating non-allergic inflammatory diseases, such as
CC   psoriasis, eczema, allergic contact dermatitis, latex dermatitis or
CC   inflammatory bowel disease e.g., ulcerative colitis or Crohn's disease.
CC   This sequence represents an immunostimulatory nucleic acid

XX
PS   Example 2; Page 35; 73pp; English.
XX
CC   The present invention relates to a new oligonucleoside which comprises
CC   alternating first and second segments. The first segment comprises at
CC   least one sugar modified nucleoside. The second segment comprises at
CC   least one 2'-deoxynucleoside. The oligonucleoside comprises at least 2 of
CC   each of the first and second segments, so that it comprises at least 4
CC   alternating segments. The oligonucleotide is useful for preparing a
CC   composition for inducing RNase H-mediated cleavage of a target RNA in a
CC   system, preventing or decreasing translation, transcription or
CC   replication of a target RNA in a system, detecting the presence of a
CC   target RNA in a system, validating a gene target corresponding to a
CC   target RNA in a system or preventing or treating a disease related to a
CC   target RNA in a system, e.g., acquired immune deficiency syndrome (AIDS)
CC   or hepatitis B. The invention is useful in gene therapy. The present
CC   sequence is an antisense oligonucleotide used in the exemplification of
CC   the invention

PT   Concurrent interrogation of a number of polymorphic sites, useful for
PT   genetic testing, carrier screening, genetic profiling, and identity
PT   testing, comprises conducting a multiplexed elongation assay using
PT   probes.
XX
PS   Example 9; Page 46; 143pp; English.
XX
CC   This invention relates to a novel method for the concurrent interrogation
CC   of a number of polymorphic sites in the presence of, and without
CC   interference from, non-designated polymorphic sites. Specifically, it
CC   comprises conducting a multiplexed elongation assay by applying one or
CC   more temperature cycles to achieve linear amplification of the target or
CC   a combination of annealing and elongation steps under temperature-
CC   controlled conditions. Furthermore, this detection method uses probe
CC   extension or elongation and relies on enzymatic recognition, a superior
CC   technique that no longer depends on differential hybridisation. The
CC   present invention describes probes and methods useful for identifying or
CC   detecting polymorphisms at one or more designated sites, such that they
CC   can identify mutations within the cystic fibrosis conductance
CC   transmembrane regulator (CFTR) or the human leukocyte antigen (HLA)
CC   genes. In addition, concurrent interrogation of a multiplicity of
CC   polymorphic sites is useful for genetic testing, carrier screening,
CC   genotyping or genetic profiling, and identity testing. This
CC   oligonucleotide is the negative control probe used for the elongation
CC   mediated multiplexed analysis of HLA-DR, in an exemplification of the
CC   invention.

PT Amplifying for RNA in a sample, useful for improving RNA polymerase based
PT RNA transcription from a polynucleotide template, comprises eliminating
PT single-stranded oligonucleotide from the transcription sample.
XX
PS Example 1; SEQ ID NO 8; 26pp; English.
XX
CC The invention relates to amplifying for RNA in a sample comprises
CC eliminating single-stranded oligonucleotide from the transcription
CC sample. The method involves synthesizing single-stranded cDNA by
CC incubating the sample RNA with reverse transcriptase and an
CC oligonucleotide primer that primes synthesis in a direction toward 5' end
CC of the RNA; converting the single-stranded cDNA into double-stranded cDNA
CC to form a transcription sample containing a cDNA template; eliminating
CC single-stranded oligonucleotide from the transcription sample; and
CC transcribing the cDNA template into RNA using an RNA polymerase. The
CC method is useful for improving RNA polymerase based RNA transcription
CC from a polynucleotide template. The method inhibits the undesired non-
CC template derived production of RNA in the transcription reaction.
CC Sequences ADI34483-ADI34489 represent oligonucleotides used in a T7 RNA
CC transcription reaction.

PT Determining a functional property of fluid in chamber by introducing a
PT support comprising test elements having reaction and detection domains,
PT introducing a test fluid, and detecting locations not reactive with the
PT fluid.
XX
PS Example 2; SEQ ID NO 2; 22pp; English.
XX
CC The invention relates to a method of determining a functional property of
CC a fluid in a chamber comprising introducing into the chamber a support to
CC which is bound several test elements, each of the test elements
CC comprising a reaction domain and a detection domain, introducing into the
CC chamber a fluid that is interactive with the reaction domains, removing
CC the fluid from the chamber, determining by means of the detection domains
CC the locations at which the fluid has not interacted with the reaction
CC domains, and relating the locations to the functional property of the
CC fluid. The reaction domains involves nucleotides. The detection domain
CC comprises a member of a specific binding pair. The determining of the
CC step involves treating the test elements to modify only those reaction
CC domains that have interacted with the fluid. The functional property is
CC chosen from the flow pattern of the fluid, reagent distribution within
CC the fluid and time dependent reactivity of the fluid. The method is
CC useful for determining a functional property of a fluid in a chamber and
CC for synthesising arrays of biopolymers e.g., arrays of polynucleotides.
CC The method provides for the characterisation of a new fluid in a known
CC flow cell, a known fluid in a new flow cell or a new fluid/flow cell
CC combination. This sequence represents a test element used in the method
CC of the invention.

PT New anti-proliferative substance comprising a radiolabeled DNA carrier,
PT useful for preventing or treating uncontrolled cellular proliferation
PT e.g. restenosis, cancer or malignant tumors.
XX
PS Claim 13; SEQ ID NO 9; 28pp; English.
XX
CC The invention relates to an anti-proliferative substance for preventing
CC uncontrolled cellular proliferation comprising a radiolabelled DNA
CC carrier, where a radioisotope is located internally within the DNA
CC sequence, at 5' end or at 3' end, and the radiolabelled DNA carrier
CC penetrates the cell membrane and is retained intracellularly for a time
CC sufficient for the radio-isotope to effect a dose therapy. The carrier in
CC the anti-proliferative substance is an oligonucleotide, which is linear
CC or a plasmid, which is circular. The plasmid is of viral or bacterial
CC origin. The oligonucleotide is a double- or a single-stranded DNA
CC sequence, which is conjugated with an antibody for cell-specific
CC delivery. The oligonucleotide is also conjugated to a stent surface,
CC cholesterol, oleic acid, linoleic acid, TGFalpha, antibody, TGFbeta,
CC cytokines or growth factors. The anti-proliferative substance is useful
CC for preventing or treating uncontrolled cellular proliferation. The
CC uncontrolled cell proliferation is a restenosis following angioplasty, or
CC cancer or a malignant tumour. The present sequence represents an
CC oligonucleotide carrier used in the invention.

PT Synthesizing single stranded cDNA, involves annealing cDNA synthesis
PT primer to RNA and synthesizing first cDNA strand, ligating adaptor to
PT single stranded cDNA using DNA ligase, and amplifying ligated single
PT stranded cDNA fragment.
XX
PS Example 1; SEQ ID NO 6; 22pp; English.
XX
CC The invention describes a method of synthesising single stranded cDNA by
CC a 5'-ligated adaptor-mediated process involving: annealing a cDNA
CC synthesis primer to RNA, separating the cDNA strand from the RNA,
CC purifying the cDNA, contacting the cDNA with an adaptor, ligating the
CC adaptor through 5'-phosphate on strand (II) of the adaptor to single
CC stranded using DNA ligase, and amplifying the obtained ligated single
CC stranded fragment in an molecular amplification procedure. The method is
CC useful for: synthesising a single stranded cDNA by a 5'-ligated adaptor-
CC mediated process, where the source of nucleic acid is chosen from blood,
CC serum, plasma, cerebrospinal fluid, urine, tissue samples, biopsies and
CC saliva. The tissue sample comprises a cell population which may be single
CC cell, 100-1000000 cells or more as desired; making a cDNA library from a
CC collection of mRNA molecules in a sample, where the method is applied to
CC amplify the cDNAs corresponding to the mRNAs by annealing one or more
CC cDNA synthesis primers to several mRNAs in the sample; producing a
CC subtractive hybridisation probe which involves synthesising a double-
CC stranded cDNA collection from a first mRNA population by the method,
CC where primer 1 is modified by biotin in the 5' end, isolating the biotin-
CC containing single stranded cDNA (sense) by use of streptavidin coated
CC magnetic beads, synthesising a double-stranded cDNA collection from a
CC second mRNA population according to the method, isolating the non-biotin-
CC containing single stranded cDNA (anti-sense) by use of streptavidin
CC coated magnetic beads, hybridising the sense to the anti-sense cDNA,
CC where an unhybridised sub-population of the anti-sense cDNA is found,
CC isolating the unhybridised sub-population of the antisense cDNA by use of
CC streptavidin coated cDNA, and generating a second double-stranded cDNA
CC collection from the unhybridised sub-population by PCR using primer 1 and
CC primer 2; and detecting expression of a gene in a pre-selected cell
CC population. The method is an improved method for producing amplified
CC heterogeneous populations of cDNA from limited quantities of RNA or other
CC nucleic acid. This sequence represents a poly-A-tail used to in the
CC production single stranded cDNA.

PT Constructing synthetic polynucleotide for modulating the quality of a
PT selected phenotype displayed by an organism comprises replacing a first
PT codon with a synonymous codon to construct the synthetic polynucleotide.
XX
PS Example 1; SEQ ID NO 77; 86pp; English.
XX
CC The present invention describes a method for constructing a synthetic
CC polynucleotide from which a polypeptide is producible to confer a
CC selected phenotype to an organism of interest or part in a different
CC quality than that conferred by a parent polynucleotide that encodes the
CC same polypeptide. The method comprises: (a) selecting a first codon of
CC the parent polynucleotide for replacement with a synonymous codon, where
CC the synonymous codon is selected on the basis that it exhibits a
CC different phenotypic preference than the first codon in a comparison of
CC phenotypic preferences in test organisms or parts, where the test
CC organism are selected from organisms of the same species as the organism
CC of interest and organisms that are related to the organisms of interest;
CC and (b) replacing the first codon with the synonymous codon to construct
CC the synthetic polynucleotide. Also described: (1) a method for
CC determining the phenotypic preference of a first codon in an organism of
CC interest or its parts; (2) a synthetic polynucleotide constructed from
CC the method above; (3) an organism or interest or part containing a
CC synthetic polynucleotide constructed from the method above; (4) an
CC organism or interest or part containing a synthetic construct that
CC comprises a regulatory polynucleotide operably linked to a tandem repeat
CC of a first codon fused in frame with a reporter polynucleotide that
CC encodes a reporter protein, which produces, or is predicted to produce a
CC selected phenotype or a phenotype of the same class as the selected
CC phenotype in the organism or part; (5) a method of modulating the quality
CC of a selected phenotype that is displayed by an organism of interest or
CC part and that results from the expression of a parent polynucleotide that
CC encodes the polypeptide; (6) a method of enhancing the quality of a
CC selected phenotype that is displayed by an organism of interest or part
CC and that results from the expression of a parent polynucleotide that
CC encodes the polypeptide; and (7) a method of reducing the quality of a
CC selected phenotype that is displayed by an organism of interest or part
CC and that results from the expression of a parent polynucleotide that
CC encodes the polypeptide. The method is useful for constructing a
CC synthetic polynucleotide from which a polypeptide is producible to confer
CC a selected phenotype to an organism of interest or part in a different
CC quality than that conferred by a parent polynucleotide that encodes the
CC same polypeptide. It is useful for modulating the quality of a selected
CC phenotype displayed by an organism or part. The present sequence encodes
CC a synthetic leader sequence, which is used in an example from the present
CC invention.

PT   New nucleic acid molecules encoding rat KDR protein, useful for
PT   identifying inhibitors of KDR activity for treating cancer, ischemic
PT   ocular diseases, and inflammation.
XX
PS   Example 2; Page 30; 77pp; English.
XX
CC   The invention relates to rat receptor tyrosine kinase (KDR) and its
CC   corresponding nucleic acid sequence. The nucleic acid molecules of the
CC   invention are useful for identifying compounds that modulate wild-type
CC   rat KDR activity to evaluate the safety and efficacy of specific
CC   inhibitors of KDR in rats. KDR inhibitors are useful for treating cancer,
CC   ischaemic ocular diseases such as proliferative retinopathy and
CC   inflammation. The present sequence is a reverse transcription (RT) PCR
CC   primer used for cloning rat KDR cytosolic domain. This sequence is used
CC   in the exemplification of the invention.

PT   Signal amplification method for detecting expressed gene, by using
PT   reverse transcription reaction and self-assembly reaction of
PT   oligonucleotide probes.
XX
PS   Disclosure; SEQ ID NO 4; 27pp; Japanese.
XX
CC   The invention relates to a signal amplification method (M1) for detecting
CC   expressed gene using reverse transcription reaction and a self-assembly
CC   reaction of forming a self assembly of oligonucleotide probes, thus
CC   improving detection sensitivity of the expressed gene in a DNA chip. (M1)
CC   is useful for signal amplification method (M1) for detecting expressed
CC   gene (claimed). (M1) improves detection sensitivity of the expressed gene
CC   in a DNA chip (claimed). (M1) does not require use of expensive enzymes
CC   and enables detection corresponding to the original RNA length or
CC   expression amount because of using neither linear amplification nor PCR.
CC   This sequence corresponds to a nucleotide used in the method of the
CC   invention.

PT   New short interfering nucleic acid, useful e.g. for treatment and
PT   diagnosis of obesity or diabetes, downregulates expression of the
PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 415; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

PT   New oligomers contg. modified bases - which form a triplex with G-C
PT   doublet in a DNA duplex, for treating and diagnosing HIV, hepatitis,
PT   herpes malignancy and inflammation.
XX
PS   Claim 12; Page 72; 77pp; English.
XX
CC   The synthetic oligomer is capable of forming a triplex at physiological
CC   pH with a purine rich target sequence by coupling into the major groove
CC   of the duplex. The specific target sequence of this oligomer is the human
CC   tumour necrosis factor receptor mRNA beginning at nucleotide 2354 contg.
CC   a purine rich sequence concd. on one strand of the duplex. The oligomer,
CC   and others like it are useful in diagnosis and therapy of diseases
CC   characterised by specific DNA duplex targets, e.g. HPV, HER, HIV,
CC   hepatitis B, herpes, malignant tumours and inflammation. The triple
CC   helices form under mild conditions thus assays may be carried out without
CC   subjecting the test specimen to harsh conditions. See also AAQ25452-25501
CC   and AAQ30226-447. (Updated on 25-MAR-2003 to correct PN field.) (Updated

PT Treating bacterial infections in humans or animals with
PT oligo:nucleotide(s) - resistant to nuclease and targetted to bacterial
PT nucleic acid or proteins, also conjugates of these oligo:nucleotide(s)
PT with antibiotics.
XX
PS Claim 49; Page 87; 163pp; English.
XX
CC This antisense oligonucleotide is nuclease resistant and can be used in
CC the treatment of animals, including humans, having a bacterial infection.
CC The treatment comprises administration of such nuclease resistant
CC oligonucleotides, targeted to a nucleic acid or protein of the bacterium,
CC and formulated with a carrier. A compound comprising this nuclease
CC resistant oligonucleotide can be covalently linked to an antibiotic. The
CC method is used to treat infections by a wide variety of Gram-positive and
CC Gram-negative, or acid-fast, bacteria, in human and veterinary medicine.
CC The methods are particularly used in immuno-compromised individuals (e.g.
CC patients with acquired immunodeficiency syndrome or those receiving
CC chemotherapy or radiation therapy), optionally in combination with, or
CC fused to, antiviral or other antimicrobial oligonucleotides. Apart from
CC therapeutic use, the oligonucleotides can be used to control bacteria in
CC laboratory cultures, foods, beverages and industrial processes. The
CC oligonucleotides are specific for bacteria, without affecting metabolism
CC in mammalian cells. They may also activate RNase H and have a general,
CC non-specific immune-stimulating effect. The oligonucleotides can be
CC administered orally, intranasally, rectally, topically or by injection,
CC optionally coupled to an agent (e.g. carbohydrate or polyamine) that
CC enhances cellular uptake

PT Oligomers made using chirally pure nucleoside dimers, trimers, or
PT tetramers with enhanced binding affinities.
XX
PS Example 19; Col 41-42; 30pp; English.
XX
CC The invention provides methods for preparing oligomers having phosphonate
CC internucleosidyl linkages of a preselected chirality which hybridize to a
CC target RNA sequence. The method of making comprises: (a) synthesizing a
CC nucleoside dimer, trimer, or tetramer with racemic internucleosidyl
CC phosphonate linkages; (b) purifying the racemic nucleoside to a chirally
CC pure nucleoside; and (c) sequentially linking at least 2 of the chirally
CC pure nucleosides to form a synthetic oligomer that is enriched for
CC phosphonate internucleosidyl linkages of a preselected chirality and is
CC complementary to an RNA target sequence. The methods are useful for
CC providing chirally enriched synthetic oligomers. Rp chirally enriched
CC synthetic oligomers have enhanced binding affinities for RNA compared to
CC oligomers with racemic all methylphosphonate internucleosidyl linkages.
CC Sequences AAX91054-75 represent oligomers chemically synthesised using
CC the method of the invention

PT   New PS133 polynucleotides, useful for detecting, diagnosing, staging,
PT   monitoring, prognosing, preventing, treating or determining the
PT   predisposition of an individual to a prostate disease, e.g. cancer.
XX
PS   Example 2; Col 75; 93pp; English.
XX
CC   The patent discloses PS-133 polynucleotides and polypeptides which are
CC   indicative of prostate disease. The patent also provides a method for
CC   detecting PS133 protein in a test sample. The polynucleotides of the
CC   invention are useful for detecting, diagnosing, staging, monitoring,
CC   prognosing, preventing, treating or determining the predisposition of an
CC   individual to prostate diseases such as cancer. PS133-derived
CC   polynucleotides are used for the detection of normal or altered gene
CC   expression, in assays for detecting, amplifying or quantifying genes or
CC   nucleic acids relating to prostate tissue diseases and conditions, and to
CC   produce probes which can be used in the detection of nucleic acids in a
CC   sample. PS-133 proteins are used as immunogens for the production of
CC   antibodies. PS-133 sequences are also used in gene therapy. The present
CC   DNA sequence is primer, PS133.F1-5 which is used for sequencing PS-133
CC   EST-specific clones

PT   Novel simple sequence repeats in clover species useful for selection of
PT   genes in legume breeding, for profiling legume species varieties and for
PT   testing the purity of legume seed batches.
XX
PS   Claim 6; Page 35; 52pp; English.
XX
CC   The present invention relates to Simple Sequence Repeats (SSRs) from
CC   clover species. SSRs, also called microsatellites, are based on a 1-7
CC   nucleotide core element which is tandemly repeated. The SSR array is
CC   embedded in complex flanking DNA. SSRs are ideal markers for genome
CC   mapping, trait mapping and marker-assisted selection. The SSRs may be
CC   used in methods for selecting genes in clover/ legume breeding. The SSRs
CC   are also useful for DNA profiling of clover varieties and for testing the
CC   purity of legume seed batches. The present sequence is a SSR motif, which
CC   was used in the present invention

PT   Determining the racing potential of a horse comprises measuring whether
PT   grandpaternal or grandmaternal DNA from the selected grandmother DNA is
PT   over-represented in the genome of the horse.
XX
PS   Example 2; Page 24; 49pp; English.
XX
CC   The invention relates to a novel method for determining racing potential
CC   of a horse. The method comprises measuring: whether grandpaternal DNA is
CC   over-represented in the genome of the horse; or in the case where one of
CC   the grandmothers was selected for breeding on the basis of racing
CC   performance, whether grandmaternal DNA from the selected grandmother is
CC   over-represented in the genome of the horse which indicates that the
CC   horse has good racing potential. The method of the invention is useful
CC   for determining the racing potential of a horse or for obtaining a
CC   progeny horse with good racing potential. This polynucleotide sequence
CC   represents a PCR primer used in the detection method of over-
CC   representation of DNA from male grandparents of the invention

CC   The present invention describes a method for detecting and
CC   differentiating between haematopoietic cell proliferative disorders
CC   associated with at least 1 gene and/or their regulatory regions in a
CC   subject. The method comprises contacting a target nucleic acid in a
CC   biological sample obtained from the subject with at least 1 reagent,
CC   which distinguishes between methylated and non-methylated CpG
CC   dinucleotides within the target nucleic acid. ABZ09861 to ABZ11118
CC   represent specifically claimed nucleotide sequences from the present
```

CC invention. Oligonucleotides from the present invention can be used: for
CC differentiating between healthy haematopoietic cells and proliferative
CC disorder haematopoietic cells; for differentiating between acute
CC lymphocytic leukaemia and acute myelogenous leukaemia; as probes for
CC determining the cytosine methylation state and/or single nucleotide
CC polymorphisms (SNPs) of haematopoietic cell proliferation disorder
CC related sequences and their complements; and as primers for the
CC amplification of haematopoietic cell proliferation disorder related DNA
CC sequences. The nucleotide sequences from the present invention can also
CC be used for detecting a predisposition to, differentiation between
CC subclasses, diagnosis, prognosis, treatment and/or monitoring of
CC haematopoietic cell proliferative disorders. The present method enables a
CC highly specific classification of haematopoietic cell proliferative
CC disorders allowing for improved and informed treatment of patients

XX
CC The present invention describes a method for detecting and
CC differentiating between haematopoietic cell proliferative disorders
CC associated with at least 1 gene and/or their regulatory regions in a
CC subject. The method comprises contacting a target nucleic acid in a
CC biological sample obtained from the subject with at least 1 reagent,
CC which distinguishes between methylated and non-methylated CpG
CC dinucleotides within the target nucleic acid. ABZ09861 to ABZ11118
CC represent specifically claimed nucleotide sequences from the present
CC invention. Oligonucleotides from the present invention can be used: for
CC differentiating between healthy haematopoietic cells and proliferative
CC disorder haematopoietic cells; for differentiating between acute
CC lymphocytic leukaemia and acute myelogenous leukaemia; as probes for
CC determining the cytosine methylation state and/or single nucleotide
CC polymorphisms (SNPs) of haematopoietic cell proliferation disorder
CC related sequences and their complements; and as primers for the
CC amplification of haematopoietic cell proliferation disorder related DNA
CC sequences. The nucleotide sequences from the present invention can also
CC be used for detecting a predisposition to, differentiation between
CC subclasses, diagnosis, prognosis, treatment and/or monitoring of
CC haematopoietic cell proliferative disorders. The present method enables a
CC highly specific classification of haematopoietic cell proliferative
CC disorders allowing for improved and informed treatment of patients

CC This invention relates to a novel method for detecting and
CC differentiating between lung cell proliferative disorders associated with
CC at least one gene and/or their regulatory regions. Specifically, it
CC refers to a method comprising contacting a target nucleic acid in a
CC biological sample with at least one reagent, wherein the reagent is able
CC to distinguish between methylated and non-methylated CpG dinucleotides
CC present in the target DNA. As such, it is possible to further
CC differentiate and diagnose medical conditions including adenocarcinoma
CC and squamous cell carcinoma, and their respective adjacent lung tissue.
CC The present invention describes cytostatic oligomers and PNA-oligomers
CC that are useful as probes for determining the cytosine methylation state
CC or single nucleotide polymorphisms (SNPs) of the target sequence. This
CC oligonucleotide sequence is a primer oligomer used for the analysis of
CC CpG positions within genomic DNA, used in an exemplification of the
CC invention.

PT LAMP nucleic acid amplification primers for detection of cytokeratin
PT expression as indicator in diagnosis of tumour metastasis.
XX
PS Claim 3; SEQ ID NO 196; 266pp; Japanese.
XX
CC The invention relates to novel nucleic acid amplification primers for the
CC detection of human cytokeratin (CK) 18, 19 or 20 expression by the LAMP
CC (loop mediated isothermal amplification) method. The primers of the
CC invention may be useful for the detecting cytokeratin 18-20 expression as
CC an indicator for the diagnosis of tumour metastasis, particularly
CC prostate cancer and lymphoma. The amplification using the primers is
CC highly efficient and allows very sensitive detection of tumour
CC metastasis. The current sequence is that of the human CK18-related PCR
CC primer of the invention.

CC The invention relates to a kit for diagnosing and treating T-cell
CC associated diseases which comprises a panel of nucleic acid primers
CC specifically priming and allowing amplification of each Vbeta gene,
CC VbetaRNA or cDNA. The kit is useful for diagnosing organ transplant
CC rejection and diagnosing and treating T-cell associated diseases
CC including autoimmune diseases, degenerative nervous system diseases,
CC graft versus host disease, hypersensitivity diseases, infectious diseases
CC and neoplastic diseases. Autoimmune diseases include Addison's disease,
CC atrophic gastritis. Degenerative nervous system diseases include multiple
CC sclerosis and Alzheimer's disease. Hypersensitivity diseases include Type
CC I hypersensitivities such as contact with allergens that lead to
CC allergies, Type II hypersensitivities such as those present in
CC Goodpasture's syndrome and Type IV hypersensitivities such as those
CC manifested in leprosy. Infectious diseases include viral infections
CC caused by viruses such as HIV, fungal infections such as those caused by
CC the yeast genus Candida, parasitic infections such as those caused by
CC schistosomes, filaria and bacterial infections such as those caused by
CC Mycobacterium. Neoplastic diseases include lymphoproliferative diseases
CC such as leukaemias, lymphomas and cancers such as cancer of the brain,
CC breast. The present sequence represents a Vbeta gene repeat sequence.

PT Transcription modulator splice variants, useful in diagnosing or treating
PT cancers such as lung, gastrointestinal, breast, prostate, skin,
PT endocrine, cervical and renal cancer.
XX
PS Example 6; Page 42; 59pp; English.
XX
CC The invention relates to tumour-specific or tumour-enriched splice
CC variants of the human transcription modulators neuralised-1 (hNeu delta
CC NHR1), NeuroD1 (hNeuroD1), Irx-2 (Irx-2A) and Mash-1 (hMash-1-deltaN76)
CC and nucleic acids encoding these splice variants. The invention also
CC relates to a method of diagnosing cancer by determining the expression of
CC at least one splice variant of each of a plurality of transcription
CC modulators, or a plurality of splice variants of at least one
CC transcription modulator, where the splice variants are differentially
CC expressed compared to the wild-type isoform of the corresponding
CC transcription modulator, and where the expression pattern of the splice
CC variants is indicative of cancer. In this method, the transcription
CC modulators whose splice variant expression is analysed are selected from
CC NRSF, MDM2 TSG, RREB, ZNF207, TTF-1, GTFIIIA, HES-6, HRY, Msx2, Neu,
CC NeuroD1, Mash-1 and Irx-2. The invention further relates to a method for
CC the treatment of cancer by administration of a bioactive agent capable of
CC inhibiting the activity of one or more of the transcriptional modulator
CC splice variants; an antibody which binds to a transcription modulator
CC splice variant but not to the wild-type isoform; a peptide which binds to
CC the splice variant-specific antibody; and a diagnostic array for the
CC diagnosis of cancer comprising peptides which are capable of binding to
CC splice variant-specific autoantibodies but not to wild-type isoform-
CC specific autoantibodies. The methods and compositions of the present
CC invention are useful for the diagnosis, prognosis and/or treatment of
CC cancer, such as lung cancer, gastrointestinal cancer, breast cancer,
CC prostate cancer, skin cancer, sarcoma, endocrine cancer, neural cancer,
CC bladder cancer, cervical cancer, renal cancer and haematopoietic cancer.
CC Sequences ADQ15948-ADQ15988 represent PCR primers used in an example of
CC the invention to analyse the expression of various transcription
CC modulator splice variants in small cell lung cancer (SCLC) cells.

PT Predicting responsiveness of a subject with breast cell proliferative
PT disorder, useful for treating or differentiating breast cell
PT proliferative disorders comprises analyzing methylation pattern of a
PT genomic DNA from the subject.
XX
PS Disclosure; SEQ ID NO 1308; 104pp; English.
XX
CC The invention relates to a novel method for predicting the responsiveness
CC of a subject with a cell proliferative disorder of the breast tissues to
CC a therapy comprising analysing the methylation pattern of a target
CC nucleic acid by contacting at least one of the target nucleic acids in a
CC biological sample obtained from the subject prior to or during treatment.
CC The method of the invention has cytostatic activity, and may have a use
CC in gene therapy. The set of oligonucleotides comprising at least two of
CC the oligomers are useful for detecting the cytosine methylation state
CC and/or single nucleotide polymorphisms (SNPs) within the sequences. The
CC methods, nucleic acid, oligonucleotide, and kit are useful for the
CC treatment, characterisation, classification and/or differentiation, of
CC breast cell proliferative disorders. The method is also useful for
CC predicting the responsiveness of a subject with a cell proliferative
CC disorder of the breast tissues to a therapy. The present sequence is used
CC in the exemplification of the invention.

PT   New antisense oligonucleotides for modulating connective tissue growth
PT   factor expression, particularly useful for treating cancers (e.g. breast
PT   or prostate cancer), pulmonary or renal fibrosis, scleroderma or
PT   atherosclerosis.
XX
PS   Claim 3; Page 89; 139pp; English.
XX
CC   This invention relates to novel methods for modulating the expression of
CC   connective tissue growth factor (CTGF) by antisense oligonucleotides.
CC   CTGF has been mapped to human chromosome region 6q23.1, and is also known
CC   as ctgrofact, fibroblast inducible secreted protein, fisp-12, NOV2,
CC   insulin-like growth factor binding protein-related protein 2, IGFBP-rP2,
CC   IGFBP-8, Hcs24 and ecogenin. It is known to stimulate DNA synthesis and
CC   promote chemotaxis of fibroblasts, however, it is also upregulated in
CC   acute lymphoblastic leukaemia and in tumour or endothelial cells
CC   associated with the vasculature. Accordingly, antisense oligonucleotides
CC   that inhibit the expression of CTGF in cells or tissues can be used in
CC   gene therapy to treat various conditions including hyperproliferative
CC   disorders (particularly cancer, e.g. breast, prostate or renal cancer),
CC   pulmonary fibrosis, renal fibrosis, scleroderma and atherosclerosis. As
CC   such, the present invention describes these antisense oligos as having
CC   cytostatic, dermatological and antiarteriosclerotic activities. This
CC   oligonucleotide sequence is a chimeric phosphorothioate antisense oligo
CC   with 2' MOE wings and a deoxy gap, which is used to inhibit expression of
CC   mouse CTGF of the invention.

PT   Novel compound targeted to a nucleic acid molecule encoding fibroblast
PT   growth factor receptor 3, useful for inhibiting the expression of the
PT   receptor and for treating an animal having cancer or developmental
PT   disorder.
XX
PS   Example 15; Page 79; 120pp; English.
XX
CC   The invention relates to antisense compounds targetted to a nucleic acid
CC   molecule encoding fibroblast growth factor (FGF) receptor 3 (also known
CC   as FGFR-3, ACH, JTK4 and CEK2) to inhibit its expression. Antisense
CC   compounds of the invention are useful for treating diseases or conditions
CC   associated with FGFR-3 such as developmental disorders or
CC   hyperproliferative disorders, especially cancer of colorectal, bladder,
CC   bone, lung, cervical, breast or skin. They are useful as research
CC   reagents, therapeutics, prophylaxis, kits and diagnostics, and as tools
CC   in differential and/or combinatorial analyses to elucidate expression
CC   patterns of a portion of the genes expressed within cells and tissues.
CC   They are also useful in antisense therapy. The present sequence is an
CC   antisense oligonucleotide targetted to human FGFR-3

PT   New immunostimulatory oligonucleotide comprising non-palindromic nucleic
PT   acid sequence motif, useful for inducing B-cell activation, treating,
PT   preventing or ameliorating immune system disorder or tumoral disease e.g.
PT   melanoma.
XX
PS   Disclosure; Fig 3; 139pp; English.
XX
CC   This invention relates to novel immunostimulatory oligonucleotides that
CC   contain a non-palindromic sequence motif. Specifically, it refers to DNA
CC   oligonucleotides (without a CpG motif), which can stimulate an immune
CC   response in animals of the order of primate, including humans. The immune
CC   response is characterised by the proliferation, differentiation, cytokine
CC   and antibody production in B-cells, as well as cell differentiation and
CC   cytokine production in plasmacytoid dendritic cells. The present
CC   invention describes immunomodulator compositions that also comprise an
CC   antigen selected from, for example, viruses, bacteria, parasites, tumour
CC   cells and glycolipids. As such, these DNA oligos can be used in gene
CC   therapy for inducing B-cell activation, treating, preventing or
CC   ameliorating an immune system disorder or a tumoural disease including
CC   chronic myelogenous leukaemia, melanoma, Kaposi's sarcoma, and renal cell
CC   carcinoma. This oligonucleotide sequence is an immunostimulatory non-CpG
CC   variant DNA oligo, used in an exemplification of the invention.

XX
PT   Genotyping human natriuretic peptide receptor A/guanylate cyclase gene of
PT   an individual, involves determining identity of nucleotide pair at
PT   specific polymorphic sites for two copies of the gene.
XX
PS   Claim 15; Page 14; 96pp; English.
XX
CC   The invention relates to single nucleotide polymorphisms in the gene
CC   encoding the human natriuretic peptide receptor A/guanylate cyclase A
CC   (atrionatriuretic peptide receptor A) or NPR1 polypeptide. A method for
CC   haplotyping the NPR1 gene in an individual comprises identifying the
CC   nucleotide at one or more polymorphic sites and determining whether one
CC   of the copies of the gene is defined by one of the NPR1 haplotypes given
CC   in the specification or whether both copies are defined by a haplotype
CC   pair. This method is useful in genotyping, whereby all possible haplotype
CC   pairs can be assigned to specific genotypes. An association between a
CC   trait and a haplotype or haplotype pair of the NPR1 gene can be
CC   identified by comparing the frequency of the haplotype or haplotype pair
CC   in a population exhibiting the trait with the frequency of the haplotype
CC   or haplotype pair in a reference population, where a higher haplotype
CC   frequency in the trait population indicates the trait is associated with
CC   the haplotype or haplotype pair. NPR1 and its corresponding DNA are used
CC   for studying the expression and function of NPR1, for use in screening
CC   for candidate drugs to treat diseases related to NPR1 activity, such as
CC   hypertension. The sequences are also useful for studying the effect of
CC   variation on the biological activity of NPR1 as well as on the binding
CC   affinity of candidate drugs targeting NPR1. Sequences AAS99959-AAS99990
CC   and ABK09390-ABK09462 represent probes, sequencing primers and PCR
CC   primers used to detect NPR1 gene polymorphisms

PT   Amyloid beta precursor protein binding protein 159 kD (APPBP1) gene
PT   polymorphic variants, useful e.g. in studying the expression and function
PT   of APPBP1 and screening candidate drugs for treating Alzheimer's disease.
XX
PS   Claim 17; Page 13; 104pp; English.
XX
CC   The invention relates to an isolated polypeptide comprising a sequence
CC   which is a polymorphic variant of a reference sequence for the amyloid
CC   beta precursor protein binding protein 1, 59kD (APPBP1) protein or its
CC   fragment. The polymorphic variants are useful in studying the expression
CC   and function of APPBP1, in expressing APPBP1 protein for use in screening
CC   for candidate drugs to treat diseases related to APPBP1 activity, in
CC   studying the effect of the variation on the biological activity of
CC   APPBP1, and the binding affinity of candidate drugs targeting APPBP1 for
CC   the treatment of disorders such as Alzheimer's disease. The haplotyping
CC   methods are useful in validating APPBP1 as a candidate target for
CC   treating a specific condition or disease predicted to be associated with
CC   APPBP1 activity, or in the design of clinical trials of candidate drugs
CC   for treating a specific condition or disease associated with APPBP1
CC   activity. The transgenic animals are useful for studying expression of
CC   the APPBP1 isogenes in vivo, for in vivo screening and testing of drugs
CC   targeted against APPBP1 protein, and for testing the efficacy of
CC   therapeutic agents and compounds for disorders related to platelet
CC   aggregation in a biological system. ABK32771-ABK32327 represent human
CC   APPBP1 gene allele-specific oligonucleotides used in the method of the
CC   invention

PT   treating neuronal injury, degeneration, cell death and/or neoplasms.
XX
PS   Claim 2; Page 61; 86pp; English.
XX
CC   Antisense nucleic acid hybridising with an area of the mRNA and/or DNA
CC   comprising the genes c-jun, jun-B or c-fos, expression of which plays a
CC   causal role in neuronal injury, degeneration, cell death and/ or
CC   neoplasms, can be used to prevent and treat such conditions. c-jun
CC   antisense sequences are described in AAQ83267-321 and AAQ83440-43; jun-B
CC   antisense sequences are described in AAQ83322-63 and AAQ83444-45; and c-
CC   fos antisense sequences are described in AAQ83364-439 and AAQ83446- 51.
CC   Preferably the antisense sequences are phosphorothioate oligonucleotides
CC   since these are not destroyed as fast by endogenous factors as naturally
CC   occuring molecules. (Updated on 25-MAR-2003 to correct PN field.)

PT Sensitively detecting proximity changes in a system that utilizes an
PT interacting fluorophore and quencher, for high sensitivity applications,
PT involves utilizing a metal surface as quencher.
XX
PS Example 3; Page 30; 62pp; English.
XX
CC The present sequence is that of a single mismatch target sequence for a
CC molecular beacon comprising an oligonucleotide probe (see ABL57069)
CC covalently attached at the 3' end to fluorescent dye and at the 5' end to
CC a nanoparticle. In the native state, the probe forms a hairpin
CC conformation with hybridised termini. The proximity of the fluorophore
CC and quencher (gold nanoparticle) in the molecular beacon results in
CC little or no detectable fluorescence. Upon hybridisation of the central
CC complementary stretch of the probe to a target sequence, such as the
CC present sequence, the hairpin undergoes a conformational change resulting
CC in an increase in fluorescence, the extent of which is proportional to
CC the amount of target sequence present. Experiments with the present
CC sequence and a perfectly-matched target (see ABL57071) showed that
CC hybridisation was very specific to the matched target. The invention
CC relates generally to the use of metal surface quenchers such as particles
CC or films for high sensitivity applications in, for example, detection and
CC diagnostic systems

PT Detecting polymorphisms in uridine diphosphate glucuronosyltransferase
PT gene promoter, useful for optimizing drug dosages for a patient,
PT comprises determining the presence of five thymidine-adenine repeats in
PT the promoter.
XX
PS Claim 7; Col 17; 13pp; English.
XX
CC The invention relates to detecting (M1) polymorphisms in a uridine
CC diphosphate glucuronosyltransferase (UGT) gene promoter by determining
CC the presence of five thymidine-adenine (TA) repeats in the promoter,
CC where the presence of the five TA repeats correlates with increased
CC expression of the gene. The method is used for detecting polymorphisms in
CC a UGT gene promoter, preferably a UGT I (UGT1A1) gene promoter. (M1) is
CC useful for screening individuals for variation in glucuronidation
CC activity, for optimising drug dosages for a patient, where the drugs
CC (e.g. Irinotecan or TAS-103) are glucuronidated by UGT (preferably
CC UGT1A1) and the activity of the drug is effected by its level of
CC glucurodination. The method preferably involves obtaining DNA from an
CC individual, amplifying all or part of a UGT gene promoter (UGT1A1 gene
CC promoter) contained in the DNA and determining the number of TA repeats
CC in the promoter. Thus the DNA being amplified comprises all or part of
CC UGT1A1 promoter. The DNA is amplified by a polymerase chain reaction and
CC the number of TA repeats is determined by gel electrophoresis or by
CC sequencing the amplified DNA. The polymorphism comprises an allele
CC consisting of five TA repeats (TA)5, six TA repeats (TA)6, or seven TA
CC repeats (TA)7. The promoter has any one of the genotypes (TA)5/(TA)5,
CC (TA)5/(TA)6, (TA)5/(TA)7, (TA)5/(TA)8, (TA)6/(TA)8, (TA)7/(TA)8 or
CC (TA)8/(TA)8. (M1) is also useful for predicting an individuals
CC sensitivity to xenobiotics that are glucuronidated by a UGT (preferably
CC UGT1A1) gene product, the method comprising determining the number of TA
CC repeats in a UGT gene promoter, where the number of TA repeats correlates
CC with expression of the UGT gene, and the individuals sensitivity to
CC xenobiotics is effected by glucuronidation activity. The methods
CC preferably involve determining the presence of five, six or seven TA
CC repeats in the promoter. Defects in glucurodination is associated with
CC Gilbert's syndrome (hyperbilirubinaemia) and Crigler-Najjar syndrome. The
CC present sequence is the UGT1A1 promoter (TA)8 repeat

PT Detecting polymorphisms in uridine diphosphate glucuronosyltransferase
PT gene promoter, useful for optimizing drug dosages for a patient,
PT comprises determining the presence of five thymidine-adenine repeats in
PT the promoter.
XX
PS Claim 7; Col 17; 13pp; English.
XX
CC The invention relates to detecting (M1) polymorphisms in a uridine
CC diphosphate glucuronosyltransferase (UGT) gene promoter by determining
CC the presence of five thymidine-adenine (TA) repeats in the promoter,
CC where the presence of the five TA repeats correlates with increased
CC expression of the gene. The method is used for detecting polymorphisms in
CC a UGT gene promoter, preferably a UGT I (UGT1A1) gene promoter. (M1) is
CC useful for screening individuals for variation in glucuronidation
CC activity, for optimising drug dosages for a patient, where the drugs
CC (e.g. Irinotecan or TAS-103) are glucuronidated by UGT (preferably
CC UGT1A1) and the activity of the drug is effected by its level of
CC glucurodination. The method preferably involves obtaining DNA from an
CC individual, amplifying all or part of a UGT gene promoter (UGT1A1 gene
CC promoter) contained in the DNA and determining the number of TA repeats
CC in the promoter. Thus the DNA being amplified comprises all or part of
CC UGT1A1 promoter. The DNA is amplified by a polymerase chain reaction and
CC the number of TA repeats is determined by gel electrophoresis or by
CC sequencing the amplified DNA. The polymorphism comprises an allele
CC consisting of five TA repeats (TA)5, six TA repeats (TA)6, or seven TA
CC repeats (TA)7. The promoter has any one of the genotypes (TA)5/(TA)5,
CC (TA)5/(TA)6, (TA)5/(TA)7, (TA)5/(TA)8, (TA)6/(TA)8, (TA)7/(TA)8 or
CC (TA)8/(TA)8. (M1) is also useful for predicting an individuals
CC sensitivity to xenobiotics that are glucuronidated by a UGT (preferably
CC UGT1A1) gene product, the method comprising determining the number of TA
CC repeats in a UGT gene promoter, where the number of TA repeats correlates
CC with expression of the UGT gene, and the individuals sensitivity to
CC xenobiotics is effected by glucuronidation activity. The methods
CC preferably involve determining the presence of five, six or seven TA
CC repeats in the promoter. Defects in glucurodination is associated with
CC Gilbert's syndrome (hyperbilirubinaemia) and Crigler-Najjar syndrome. The
CC present sequence is the UGT1A1 promoter (TA)8 repeat

PT Arraying genome clones.
XX
PS Claim 4; Page 45; 528pp; Japanese.
XX
CC The present invention describes a method of arraying genome clones. The
CC method comprises: (a) clones of the genomic libraries contained in
CC multiwell plates numbered for discrimination are mixed in each of the
CC multiwell plates; (b) a primer designed based on the chromosome marker
CC sequence is added to the mixture to carry out an amplification reaction;
CC (c) a signal corresponding to the marker is detected from the resultant
CC amplified product to specify the discrimination Nos. of the multiwell
CC plates containing the clones having said marker sequence; (d) the order
CC of the markers is changed so that the same discrimination Nos. succeed to
CC the maximum in the specified discrimination Nos. to array the multiwell
CC plates; (e) the clones in the multiwell plates of the specified
CC discrimination Nos. are mixed respectively in each wells of longitudinal
CC and lateral directions; (f) the mixed clones are cultured and the
CC resultant cultures are amplified by using the above primer; (g) signals
CC are detected from the amplified products; (h) the clones in the multiwell
CC plates are specified from the detected result; and (i) the clones are
CC reconstituted as the positions on the chromosome and arrayed. The
CC microarray is useful for gene analysis. ABL42957 to ABL45322 represent
CC PCR primers for human chromosome 1p36-35 DNA, and ABL45323 to ABL45634
CC represent PCR primers for human chromosome 21q22.1, which are
CC specifically claimed for use in the present invention

PS   Example 1; Page 89; 238pp; English.
XX
CC   The invention relates to a method of treating a nucleic acid sample with
CC   components under nicking conditions, where the components comprise a
CC   nicking agent, and the conditions cause the nicking agent to nick the
CC   nucleic acid sample to thus produce a family of initiating
CC   oligonucleotide fragments, and subjecting one or more members of the
CC   family of initiating oligonucleotide fragments to a characterization
CC   process to thus provide results. The method is useful for creating an
CC   assay panel of diagnostic oligonucleotides that can identify any organism
CC   or individual. The method is useful for characterizing other DNA
CC   molecules e.g., cDNA, and for characterizing cDNA expression patterns.
CC   The method, kit or composition is useful for identifying the source
CC   organism of a nucleic acid sample e.g., bacterium, fungus, virus, plant,
CC   non-human animal or human. The method is particularly useful for rapidly
CC   fingerprinting DNA to identifying prokaryotic and eukaryotic species,
CC   subspecies, and especially strains or individuals of the subspecies. It
CC   is especially useful for identifying different bacterial strains involved
CC   in e.g., nosocomial infections. Furthermore, the method is useful for
CC   diagnosing bacterial disease in plants and humans, monitoring for
CC   bacterial content and/or contamination in the environment, monitoring
CC   food for bacterial contamination, monitoring manufacturing processes for
CC   bacterial contamination, monitoring quality assurance/quality control of
CC   laboratory tests involving microbiological assays, tracing bacterial
CC   contamination and/or outbreaks of bacterial infections, genome mapping,
CC   monitoring bioremediation sites, and for monitoring agricultural sites
CC   for test crops, bacteria and recombinant molecules. This sequence
CC   corresponds to nucleic acid used in the method of the invention.

XX
PT Analyzing binding between macromolecules, useful for detecting nucleic
PT acids by hybridization, where a labeled detector molecule is immobilized
PT and becomes fluorescent only after specific binding.
XX
PS Example; Page 6; 11pp; German.
XX
CC The invention relates to a novel analytical method for examining binding
CC events between first and second macromolecules. The method comprises
CC preparing a surface on which a fluorescently-labelled first macromolecule
CC is bound and which is at least partly fitted with a fluorescence-
CC suppressing layer. A sample liquid containing the second macromolecule is
CC applied and fluorescence is measured. The first macromolecule has a
CC secondary structure such that its fluorescence is suppressed by the
CC suppressing layer when it is not specifically bound to the second
CC macromolecule, but fluorescence is not suppressed when the two
CC macromolecules are specifically bound. The method of the invention may be
CC used to detect hybridisation of RNA or, particularly DNA, especially for
CC detecting the presence of particular sequences in samples, but also for
CC studying reaction kinetics. The method allows the use of molecular
CC beacons that are simple to prepare or synthesise, particularly because
CC they do not require incorporation of a quencher. The current sequence is
CC that of the control probe of the invention which is targeted to the
CC fluorescent-labelled and bound DNA oligonucleotide in the binding
CC analysis method.

PT New enzymatic nucleic acid molecules - cleave RNA produced by e.g. c-myb,
PT for treating restenosis or cancer.
XX
PS Claim 1; Page 78; 128pp; English.
XX
CC The present sequence represents the preferred target sequence for an
CC enzymatic nucleic acid, especially a hammerhead ribozyme, which cleaves
CC the human c-myb sequence at the base position indicated in the descriptor
CC line. The c-myb sequence was screened for optimal ribozyme target sites
CC using a computer folding algorithm, and regions of the mRNA which did not
CC form secondary folding structures and contained potential ribozyme
CC cleavage sites were identified. Ribozymes were synthesised and their
CC activities optimised by either varying the length of the binding arms or
CC by modification to prevent degradation by nucleases. The ribozymes cleave
CC the c-myb sequence and can be used to prevent smooth muscle cell
CC hyperproliferation in restenosis, especially after coronary angioplasty,
CC and in cancers

PT Nucleic acid molecule modulating VEGF receptor(s) gene expression or mRNA
PT stability - useful for treating e.g. tumour angiogenesis, psoriasis,
PT rheumatoid arthritis, etc., in a human patient.
XX
PS Claim 4; Page 79; 218pp; English.
XX
CC The present invention describes nucleic acid molecules which modulate the
CC synthesis, expression and/or stability of a mRNA encoding 1 or more
CC receptors of vascular endothelial growth factor (VEGF). A patient
CC (preferably human) having a condition associated with the level of the
CC fms-like tyrosine kinase 1 (flt-1), kinase insert domain containing
CC receptor (KDR) and/or foetal liver kinase 1 (flk-1) (e.g. tumour
CC angiogenesis, ocular diseases, psoriasis and rheumatoid arthritis) can be
CC treated by administering the nucleic acid molecule or the expression
CC vector to the patient. AAX67275 to AAX75752 represent specific examples
CC of nucleic acid molecules from the present invention

PT Nucleic acid molecule modulating VEGF receptor(s) gene expression or mRNA
PT stability - useful for treating e.g. tumour angiogenesis, psoriasis,
PT rheumatoid arthritis, etc., in a human patient.
XX
PS Claim 4; Page 79; 218pp; English.
XX
CC The present invention describes nucleic acid molecules which modulate the
CC synthesis, expression and/or stability of a mRNA encoding 1 or more
CC receptors of vascular endothelial growth factor (VEGF). A patient
CC (preferably human) having a condition associated with the level of the
CC fms-like tyrosine kinase 1 (flt-1), kinase insert domain containing
CC receptor (KDR) and/or foetal liver kinase 1 (flk-1) (e.g. tumour
CC angiogenesis, ocular diseases, psoriasis and rheumatoid arthritis) can be
CC treated by administering the nucleic acid molecule or the expression
CC vector to the patient. AAX67275 to AAX75752 represent specific examples
CC of nucleic acid molecules from the present invention

```
CC   The present invention describes enzymatic nucleic acid molecules with RNA
CC   cleaving activity, which specifically cleave RNA encoded by an aryl
CC   hydrocarbon nuclear transporter (ARNT) gene, an integrin subunit beta 3
CC   gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA16775 to
CC   AAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT,
CC   and AAA17168 to AAA17560 and AAA17623 to AAA17684 represent their
CC   corresponding target sequences; AAA17685 to AAA18385 and AAA19087 to
CC   AAA19154 represent ribozyme sequences for Tie-2, and AAA18386 to AAA19086
CC   and AAA19155 to AAA19222 represent their corresponding target sequences;
CC   AAA19223 to AAA20361 and AAA21501 to AAA21595 represent ribozyme
CC   sequences for integrin alpha 6 subunit, and AAA20362 to AAA21500 and
CC   AAA21596 to AAA21688 represent their corresponding target sequences;
CC   AAA21689 to AAA22475 and AAA23263 to AAA23342 represent ribozyme sequence
CC   for integrin subunit beta 3, and AAA22476 to AAA23262, AAA23343 to
CC   AAA23422 represent their corresponding target sequences. The ribozymes of
CC   the invention are used for modulating the synthesis, expression and/or
CC   stability of an mRNA encoding angiogenic factor, especially ARNT,
CC   integrin subunit beta-3, integrin subunit alpha-6, or Tie-2. They are
CC   especially used to treat cancer, diabetic retinopathy, age related
CC   macular degeneration (ARMD), inflammation, and arthritis, as well as
CC   neovascular glaucoma, myopic degeneration, psoriasis, verruca vulgaris,
CC   angiofibroma of tuberous sclerosis, pot-wine stains, Sturge Weber
CC   syndrome, Kippel-Trenaunay-Weber syndrome, Osler-Weber-Rendu syndrome,
CC   and other syndromes and diseases related to the levels of ARNT, Tie-2,
CC   integrin subunit alpha-6, or integrin subunit beta-3

PT   New nucleic acids that interact, and optionally cleave, target sequences,
PT   used to treat cancer.
XX
PS   Claim 77; Page 79; 148pp; English.
XX
CC   The present invention describes nucleic acids (A) that interact stably
CC   with a target sequence and contain at least one phosphoro(di)thioate
CC   link, having endonuclease activity. (A), and more generally any catalytic
CC   nucleic acid (A') that modulates expression of the oestrogen receptor
CC   gene, are used to treat cancer (particularly of breast or endometrium),
CC   in vivo or by transforming cells ex vivo and implanting treated cells, or
CC   for other conditions associated with levels of oestrogen receptor.
CC   Because of the high selectivity for targeted RNA, (A) can also be used to
CC   correlate inhibition of gene expression with alterations in phenotype,
CC   particularly for identification of therapeutic targets, and as research
CC   reagents (for RNA, in the same way that restriction endonucleases are
CC   used with DNA). The combination of modifications in (A) improves
CC   resistance to nucleases, binding affinity and/or activity. AAA23503 to
CC   AAA24747 represent oestrogen receptor hammerhead ribozyme sequences, and
CC   AAA24748 to AAA25992 represent their corresponding target sequences.
CC   AAA25993 to AAA26105 represent oestrogen receptor hairpin ribozyme
CC   sequences, and AAA26107 to AAA26218 represent their corresponding target
CC   sequences. AAA26219 to AAA26271 represent other ribozyme sequences and
CC   antisense oligonucleotides used in the exemplification of the present
CC   invention

PT Nucleic acid molecules, e.g., enzymatic nucleic acids and antisense
PT constructs, which down regulate expression of a CD20 gene or neurite
PT growth inhibitor gene useful for treating, e.g., lymphoma, leukemia, and
PT central nervous system injury.
XX
PS Claim 30; Page 142; 200pp; English.
XX
CC The invention relates to a nucleic acid molecule which down regulates
CC expression of a CD20 gene and a nucleic acid molecule which down
CC regulates expression of a neurite growth inhibitor gene (NOGO). The
CC nucleic acids may be enzymatic nucleic acids (e.g. a ribozyme or a
CC DNAzyme) an Inozyme (an endolytic nucleic acid cleaving a an RNA molecule
CC possessing an NCH motif), a G-cleaver (cleaving RNA with a NYN motif) pr
CC an amberzyme (cleaving RNA with an NGN triplet), a zinzyme (cleaving RNA
CC with a YGY motif). The CD20-targetting nucleic acid is used to cleave RNA
CC of CD20 in the presence of a divalent cation that is preferably Mg^2^+.
CC Furthermore, it may be contacted with a cell to reduce CD20 activity of
CC the cell and treat a patient having a condition associated with the level
CC of CD20. The treatment may further comprise the use of one or more
CC therapies. In particular, the CD20 targetting nucleic acid may be used to
CC treat lymphoma, leukaemia, B-cell lymphoma, low-grade or follicular non-
CC Hodgkin's lymphoma (NHL), bulky low-grade or follicular NHL, lymphocytic
CC leukaemia, HIV (human immunodeficiency virus) associated NHL, mantle-cell
CC lymphoma (MCL), immunocytoma (IMC), small B-cell lymphocytic lymphoma,
CC immune thrombocytopaenia, and inflammatory arthropathy. The NOGO-
CC targetting nucleic acid is used to cleave RNA of the NOGO gene in the
CC presence of a divalent cation that is preferably Mg^2^+. Furthermore, the
CC nucleic acid may be contacted with a cell to reduce NOGO activity of the
CC cell and treat a patient having a condition associated with the level of
CC NOGO. The treatment may further comprise the use of one or more
CC therapies. In particular, the NOGO-targetting nucleic acid may be used to
CC treat central nervous system (CNS) injury and cerebrovascular accident
CC (CVA, stroke), Alzheimer's disease, dementia, multiple sclerosis (MS),
CC chemotherapy-induced neuropathy, amyotrophic lateral sclerosis (ALS),
CC Parkinson's disease, ataxia, Huntington's disease, Creutzfeldt-Jakob
CC disease, muscular dystrophy, and/or other neurodegenerative disease
CC states which respond to the modulation of NOGO expression. The present
CC sequence is a hammerhead ribozyme of the invention

PT Detecting polymorphisms in uridine diphosphate glucuronosyltransferase
PT gene promoter, useful for optimizing drug dosages for a patient,
PT comprises determining the presence of five thymidine-adenine repeats in
PT the promoter.
XX
PS Example 6; Col 11; 13pp; English.
XX
CC The invention relates to detecting (M1) polymorphisms in a uridine
CC diphosphate glucuronosyltransferase (UGT) gene promoter by determining
CC the presence of five thymidine-adenine (TA) repeats in the promoter,
CC where the presence of the five TA repeats correlates with increased
CC expression of the gene. The method is used for detecting polymorphisms in
CC a UGT gene promoter, preferably a UGT I (UGT1A1) gene promoter. (M1) is
CC useful for screening individuals for variation in glucuronidation
CC activity, for optimising drug dosages for a patient, where the drugs
CC (e.g. Irinotecan or TAS-103) are glucuronidated by UGT (preferably
CC UGT1A1) and the activity of the drug is effected by its level of
CC glucurodination. The method preferably involves obtaining DNA from an
CC individual, amplifying all or part of a UGT gene promoter (UGT1A1 gene
CC promoter) contained in the DNA and determining the number of TA repeats
CC in the promoter. Thus the DNA being amplified comprises all or part of
CC UGT1A1 promoter. The DNA is amplified by a polymerase chain reaction and
CC the number of TA repeats is determined by gel electrophoresis or by
CC sequencing the amplified DNA. The polymorphism comprises an allele
CC consisting of five TA repeats (TA)5, six TA repeats (TA)6, or seven TA
CC repeats (TA)7. The promoter has any one of the genotypes (TA)5/(TA)5,
CC (TA)5/(TA)6, (TA)5/(TA)7, (TA)5/(TA)8, (TA)6/(TA)8, (TA)7/(TA)8 or
CC (TA)8/(TA)8. (M1) is also useful for predicting an individuals
CC sensitivity to xenobiotics that are glucuronidated by a UGT (preferably
CC UGT1A1) gene product, the method comprising determining the number of TA
CC repeats in a UGT gene promoter, where the number of TA repeats correlates
CC with expression of the UGT gene, and the individuals sensitivity to
CC xenobiotics is effected by glucuronidation activity. The methods
CC preferably involve determining the presence of five, six or seven TA
CC repeats in the promoter. Defects in glucurodination is associated with
CC Gilbert's syndrome (hyperbilirubinaemia) and Crigler-Najjar syndrome. The
CC present sequence is the UGT1A1 promoter (TA)7 repeat region

XX
PS Claim 4; Page 124; 149pp; English.
XX
CC The invention relates to a nucleic acid molecule (I) which down regulates
CC expression of an Ets-related gene (ERG). (I) is useful for treating
CC conditions selected from cancer, lymphoma, Ewing's sarcoma, melanoma,
CC tumour angiogenesis, diabetic retinopathy, macular degeneration,
CC neovascular glaucoma, myopic degeneration, arthritis, psoriasis, verruca
CC vulgaris, angiofibroma of tuberous sclerosis, port-wine stains, Sturge
CC Weber syndrome, Kippel-Trenaunay-Weber syndrome, Osler-Weber-rendu
CC syndrome, leukaemia, osteoporosis and wound healing. (I) is useful for
CC treating a patient having a condition associated with the level of ERG,
CC by contacting cells of the patient with (I) under conditions suitable for
CC the treatment. The method comprises the use of one or more therapies
CC under conditions suitable for the treatment. Leukaemia or tumour

```
CC   angiogenesis is treated by administering (I) to the patient in
CC   conjunction with one or more of other therapies such as radiation or
CC   chemotherapy treatment. (I) is useful for reducing ERG activity in a
CC   cell, by contacting the cell with (I). (I) is useful for cleaving RNA of
CC   ERG gene, by contacting (I) with RNA, in the presence of a divalent
CC   cation such as Mg2+. (I) is useful for diagnosis of conditions and
CC   diseases related to the expression of ERG, and as diagnostic tool to
CC   examine genetic drift and mutations within diseased cells or to detect
CC   the presence of ERG RNA in a cell. (I) is useful for specifically
CC   targeting genes that share homology with ERG gene or ERG fusion genes.
CC   ABK17354-ABK22719 represent nucleic acids, including antisense and
CC   enzymatic nucleic acid molecules which regulate expression of ERG, and

CC   regulate expression of chloride channel calcium activated 1 (CLCA1) genes
CC   by cleaving RNA derived from the genes. The nucleic acid sequences are
CC   useful as pharmaceutical agents for treating conditions such as chronic
CC   obstructive pulmonary disease (COPD), chronic bronchitis, asthma, cystic
CC   fibrosis, obstructive bowel syndrome and any other diseases or conditions
CC   that are related to or will respond to the levels of CLCA1 in a cell or
CC   tissue. The sequences are useful for reducing CLCA1 activity in a cell,
CC   hence, are useful for treatment of a patient having a condition
CC   associated with the level of CLCA1, where the invention further comprises
CC   the use of one or more therapies under conditions suitable for the
CC   treatment, for example, oxygen therapy, bronchodilators, corticosteroids,
CC   antibacterials, vaccinations, acetylcysteine and mucokinetic agents. The
CC   nucleic acids of the invention are also used as diagnostic tools to
CC   examine genetic drift and mutations within diseased cells or to detect
CC   the presence of CLCA1 RNA in a cell. This sequence represents an
CC   enzymatic nucleic acid molecule of the invention

PT   New zinc finger-containing proteins and nucleic acids, useful in
PT   manufacturing a medicament for treating or preventing a disorder
PT   associated with decreased or increased expression or activity of MDZ3,
PT   MDZ4, MDZ7 or MDZ12, e.g. cancer.
XX
PS   Example 8; SEQ ID NO 5261; 103pp; English.
XX
CC   The present invention relates to novel human zinc finger-containing
CC   proteins and their coding sequences: MDZ3, MDZ4, MDZ7, MDZ12. MDZ3 is
CC   encoded at chromosome 7q22.1, MDZ4 is encoded at chromosome 6p21.3-22.2,
CC   MDZ7 is encoded at chromosome 16p11.2 and MDZ12 is encoded at chromosome
CC   15q26.1. The MDZ3, MDZ4, MDZ7, and MDZ12 sequences are useful in therapy,
CC   or in manufacturing a medicament for treating or preventing a disorder
CC   associated with decreased or increased expression or activity of MDZ3,
CC   MDZ4, MDZ7, or MDZ12, e.g. cancer or developmental disorders. The nucleic
CC   acids and proteins are also useful for diagnosing or monitoring a disease
CC   caused by altered expression of MDZ3, MDZ4, MDZ7, or MDZ12. The nucleic
CC   acids can also be used as probes to detect and characterize gross
CC   alterations in MDZ3, MDZ4, MDZ7, or MDZ12 genetic locus. The probes are
CC   useful in constructing microarrays for measuring gene expression. The
CC   proteins are useful as therapeutic agents for gene therapy or as
CC   vaccines. The present sequence was used to illustrate the invention.

CC   The present invention relates to nucleic acid molecules which modulate
CC   the synthesis, expression and/or stability of Hepatitis C virus (HCV) or
CC   Hepatitis B virus (HBV) RNA. The nucleic acid molecules include antisense
CC   and enzymatic nucleic acids such as hammerhead ribozymes, DNAzymes,
CC   inozymes, zinzymes, amberzymes, and G-cleaver ribozymes. Also disclosed
CC   are nucleic acid decoy molecules and aptamers that bind to HBV reverse
CC   transcriptase and/or HBV reverse transcriptase primer sequences, as well
CC   as oligonucleotides that specifically bind the Enhancer I region of HBV
CC   DNA. The nucleic acids may be used to modulate the expression of HBV
CC   genes and HBV viral replication. Also disclosed is a method for screening
CC   compounds and/or potential therapies directed against HBV, and compounds
CC   that modulate the expression and/or replication of HCV. The compounds and
CC   methods of the invention are useful for the treatment of degenerative and
CC   disease states related to HBV and HCV infection, replication and gene
CC   expression such as cirrhosis, liver failure, and hepatocellular
CC   carcinoma. The present sequence represents a substrate for one of the HCV
CC   DNAzyme or minus strand DNAzyme sequences disclosed in the present
CC   invention

PS Example 8; Page 67; 97pp; English.
XX
CC The specification describes a method for detecting the presence of a
CC reproductive function-modulating organism. The method comprises detecting
CC an organism that is capable of adhering to sperm and that correlates with
CC the presence or risk of a condition such as infertility, adverse
CC pregnancy outcome or adverse assisted reproductive technology (ART)
CC outcome. The method is useful for the treatment and prophylaxis of male
CC infertility, adverse pregnancy outcome (e.g. miscarriage, pre-term
CC delivery, premature onset of labour, prolonged rupture of membrane,
CC neonatal morbidity or mortality) or adverse ART outcome (e.g reduced
CC embryonic development, reduced implantation rate, reduced fertilization
CC rate, reduced clinical pregnancy rate, reduced viable pregnancy rate,
CC reduced blastocyst culture rate or increased miscarriage rate). The
CC present PCR primer was used to detect the presence of Ureaplasma organism
CC in semen samples, in the course of the invention

PT   Identifying a candidate polymorphic repeat within a coding sequence, for
PT   understanding or treating genetic disease, comprises detecting tandem
PT   repeats in a target coding sequence and scoring the repeats for
PT   polymorphic probability.
XX
PS   Example; Col 385; 588pp; English.
XX
CC   The invention discloses a method for identifying a candidate polymorphic
CC   repeat within a coding sequence (expressed sequence tag, EST), which
CC   comprises detecting tandem repeats in a target coding sequence, scoring
CC   the repeats for polymorphic probability and generating a dataset
CC   correlating the repeats with polymorphic probability to identify a
CC   candidate polymorphic repeat. The computational methods (polymorphic
CC   marker prediction of ubiquitous simple sequences, POMPOUS, and Rep-X) are
CC   useful for identifying and detecting candidate polymorphic repeats in
CC   human genes, which can be used to understand, treat or eliminate genetic
CC   diseases, predispositions or adverse drug-treatment reactions. Examples
CC   of diseases linked to nucleotide repeats are Machado-Joseph, Haw River
CC   syndrome, Huntington's disease, fragile-X syndrome, Fredreich's ataxis,
CC   myotonic dystrophy, hyperandrogenaemia, spinal and bulbar atrophy and
CC   spinocerebellar ataxia. The sequences presented in ABX79676-ABX80022 are
CC   the polymorphic repeats identified for a search of human ESTs

PT Nucleic acid molecule modulating VEGF receptor(s) gene expression or mRNA
PT stability - useful for treating e.g. tumour angiogenesis, psoriasis,
PT rheumatoid arthritis, etc., in a human patient.
XX
PS Claim 4; Page 93; 218pp; English.
XX
CC The present invention describes nucleic acid molecules which modulate the
CC synthesis, expression and/or stability of a mRNA encoding 1 or more
CC receptors of vascular endothelial growth factor (VEGF). A patient
CC (preferably human) having a condition associated with the level of the
CC fms-like tyrosine kinase 1 (flt-1), kinase insert domain containing
CC receptor (KDR) and/or foetal liver kinase 1 (flk-1) (e.g. tumour
CC angiogenesis, ocular diseases, psoriasis and rheumatoid arthritis) can be
CC treated by administering the nucleic acid molecule or the expression
CC vector to the patient. AAX67275 to AAX75752 represent specific examples
CC of nucleic acid molecules from the present invention

PT New rapamycin-responsive transfected cells - contg. recombinant DNA
PT encoding fusion proteins which act as biological switches for regulating
PT biological events.
XX
PS Example 8; Page 102; 149pp; English.
XX
CC The present sequence represents an oligonucleotide which is involved in
CC the rapamycin-dependent activation of signal transduction. This is
CC involved in the construction of transcription factor fusion proteins,
CC which in turn are involved in the production of animal cells containing
CC at least two recombinant DNAs. One DNA should encode a chimeric protein
CC which is capable of binding to rapamycin, or a rapamycin analogue, and

```
CC   comprises at least one rapamycin binding domain (RBD) and at least one
CC   protein domain heterologous to it; the second recombinant DNA should
CC   encode a second chimeric protein which is capable of forming a complex
CC   with rapamycin, or a rapamycin analogue, and the first chimeric protein
CC   and comprises at least one FKBP:rapamycin binding (FRB) domain and at
CC   least one domain heterologous to it. Contacting these genetically
CC   engineered cells with rapamycin or analogues results in the formation of
CC   a complex (between the fusion proteins, and the rapamycin), and
CC   initiation of a biological response. The products can be used for
CC   regulating biological events such as gene transcription, activation of an
CC   intracellular signal transduction pathway leading to e.g. gene expression
CC   or apoptotic cell death, gene knock-out, blockade of a gene or inhibition
CC   of function of a gene product. They are used particularly for regulated
CC   gene therapy and for production of recombinant proteins and viruses

PT   Novel antisense compounds useful for inhibiting the expression of Smad5
PT   in human cells or tissues and treating inflammation and tumor formation.
XX
PS   Example 15; Col 38; 31pp; English.
XX
CC   Sequences AAA06974-A07013 represent antisense oligonucleotides targetted
CC   to the human Smad5 gene, which inhibit its expression. The antisense
CC   oligonucleotides were designed to target different regions of the human
CC   Smad5 RNA, and were analysed for their effect on Smad5 mRNA levels by
CC   quantitative real-time PCR. The Smad proteins are a family of cytosolic
CC   proteins which are involved in TGF-beta superfamily signal transduction.
CC   On ligand binding, TGF-beta superfamily proteins (such as bone
CC   morphogenetic protein (BMP), activin and TGF-betas themselves)
CC   phosphorylate Smad proteins, which then homo- or heterodimerise and
CC   translocate to the nucleus to activate target gene transcription. Smad5
CC   (also known as MADH5, Dwarfin-C and JV5-1) is a member of the subgroup of
CC   Smad family transcription factors which mediate signal transduction from
CC   BMPs. Smad5 is activated by BMP-2 through the BMP type Ia or Ib
CC   receptors, causing it to heterodimerise with the common mediator Smad4
CC   (US6013787; AAY69622) and translocate to the nucleus. The antisense
CC   oligonucleotides of the invention are useful for diagnosis, prevention
CC   and treatment of conditions associated with Smad5 expression, such as
CC   tumour formation, inflammation and certain infections

PT   Assay for a chemical or drug in a sample comprises detecting binding of
PT   an oligonucleotide selected from a set of randomized oligonucleotides.
XX
PS   Disclosure; Col 27-28; 20pp; English.
XX
CC   This invention describes a novel method (I) for specifically detecting a
CC   chemical or drug in a sample comprises contacting the sample with an
CC   oligonucleotide having specific activity for a target biomolecule and
CC   detecting the presence or absence of binding where the presence of
CC   binding indicates the presence of the chemical or drug in the sample. The
CC   oligonucleotide is identified by: (a) assaying a prepared set of
CC   randomized oligonucleotides for activity against a target biomolecule;
CC   (b) separating active from inactive oligonucleotides; (c) recovering the
CC   active oligonucleotides; and (d) characterizing the recovered
CC   oligonucleotides by microanalytical structure determination. The method
CC   can be used for diagnostic or research purposes

XX
PT   New antisense compounds that limit the expression of human TRADD protein,
PT   useful in the treatment and diagnosis of cancer, inflammation and septic
PT   shock.
XX
PS   Claim 3; Page 52; 85pp; English.
XX
CC   The intracellular protein TRADD has been identified as a critical link
CC   between tumour necrosis factor (TNF) receptor binding and downstream
CC   activation of NF-kappa-B. Overexpression of native TRADD activates NF-
CC   kappa-B in the absence of TNF and dominant negative mutants of TRADD
CC   block TNF-induced NF-kappa-B activation. A second effect of TNF in many
CC   cell types is the induction of apoptosis (programmed cell death). TRADD
CC   overexpression has been shown to mimic TNF induction of apoptosis as
CC   well. Data indicates that TRADD and other downstream effector proteins
CC   are the rate limiting step of TNF action and would therefore serve as the
CC   most efficient targets for inhibition of TNF-induced events. Antisense
CC   oligonucleotides capable of inhibiting TRADD function may therefore be
CC   useful in a number of therapeutic, diagnostic and research applications.
CC   Inhibiting expression of TRADD by contacting human cells or tissues with
CC   the antisense compound may be used to treat a disease or condition
CC   associated with TRADD expression, for example, septic shock,
CC   inflammation, or cancer. TRADD antisense oligonucleotides of varying
CC   inhibitory capabilities are listed in GENESEQ records AAZ93438-Z93517.
CC   The antisense oligonucleotides exhibit enhanced inhibitory capabilities
CC   when they have 2'-MOE wings and a deoxy gap

PT Determining the concentration of a target nucleic acid, useful e.g. for
PT detecting genetic mutations, comprises using a fluorescently labeled
PT probe in which emission is reduced by binding to the target nucleic acid.
XX
PS Example 5; Page 21; 55pp; English.
XX
CC The invention relates to the determination of the concentration of a
CC nucleic acid target, using a fluorescently labeled probe which produces
CC reduced fluorescence emission when hybridised to the target nucleic acid.
CC The method comprises measuring the reduction in emission caused by
CC hybridisation. The new method is particularly used to quantify target
CC nucleic acids by a real-time polymerase chain reaction, e.g. for
CC quantifying microbial cells in co-cultures or symbiotic systems, for
CC detecting gene mutations or polymorphisms, and for analysing melting
CC curves of target nucleic acids to determine a Tm value. Methods of the
CC invention allow target nucleic acids to be quantified quickly, easily and
CC accurately. Particularly there is no need to remove unbound probe, and no
CC materials are introduced that inhibit amplification by Taq polymerase (so
CC conventional PCR conditions can be used). The specificity of PCR is kept
CC high (amplification of primer dimers is delayed), and the limit of
CC quantitation is reduced. Complex probes are not needed, and amplification
CC can be monitored in real time. The working graph for data analysis
CC (automatically generated by a computer) has a higher correlation
CC coefficient than conventional graphs so more accurate quantitation is
CC possible. The current sequence represents a nucleic acid probe of the
CC invention that was used for investigating the base selectivity of a
CC target nucleic acid

PT   New epididymis-specific protein, also related nucleic acid and
PT   antibodies, useful for diagnosis and treatment of male infertility and as
PT   reversible contraceptive.
XX
PS   Example 1; Page 60; 63pp; German.
XX
CC   This invention describes a novel epididymis-specific human protein HE12
CC   which has antiinfertility and contraceptive activity. The products of the
CC   invention modulate heparin and apolipoprotein A-I binding in the
CC   epididymis and thus capacitance of sperm. The protein of the invention,
CC   also similar sequences from other animals, their derivatives and
CC   fragments, are useful for diagnosis of male infertility. Antibodies (Ab)
CC   directed against the protein and nucleic acid that encodes it, are useful
CC   for treatment of male infertility and as reversible contraceptives since
CC   they have a post-testicular site of action and do not interfere with
CC   hormone metabolism. This sequence represents a PCR primer used in the
CC   amplification of the canine epididymis-specific polynucleotide described
CC   in the method of the invention

CC The present invention relates to a method (M1) for determining a
CC predisposition for or the occurrence of neurodegenerative disease in a
CC subject. The method comprises detecting in a target nucleic acid obtained
CC from the subject the presence or absence of an allelic variant of one or
CC more polymorphic regions of one or more genes selected from uPA
CC (Urokinase plasminogen activator), SNCG (gamma-synuclein), IDE (insulin-
CC degrading enzyme), KNSL1 (Kinesin-like protein 1), LIPA (lysosomal acid
CC lypase), and TNFRSF6 (Tumour Necrosis Factor Receptor-SF6), where the
CC presence of at least one of the allelic variant of one or more
CC polymorphic regions is indicative of a predisposition for or the
CC occurrence of neurodegenerative disease. The genes are all located on
CC chromosome 10. M1 is useful for determining a predisposition for or the
CC occurrence of, and for treating neurodegenerative disease, particularly
CC Alzheimer's disease. The present sequence is a PCR primer, which was used
CC in the method of the invention.

PT infertility.
XX
PS Claim 4; SEQ ID NO 65; 97pp; English.
XX
CC The present invention describes an oligonucleotide (I) comprising a
CC nucleic acid sequence suitable for identifying an olfactory receptor gene
CC selected from a group comprising SEQ ID Nos. 79-104, or an allelic
CC variant. Also described: (1) a kit for identifying an olfactory receptor
CC gene comprising at least one oligonucleotide (I); (2) an array suitable
CC for detecting the presence of at least one allelic variant of an
CC olfactory receptor gene, comprising at least one oligonucleotide (I)
CC contained in or attached to a support; (3) typing (M1) a subject
CC according to presence or absence of allelic variants of olfactory
CC receptor genes comprising detecting the presence or absence of at least
CC one olfactory receptor gene in a biological sample; (4) a nucleic acid
CC construct comprising a polynucleotide encoding an olfactory receptor
CC gene, or an allelic variant, selected from SEQ ID Nos. 79-104, and a
CC promoter for directing transcription; and (5) a cell comprising the
CC nucleic acid construct. The oligonucleotide (I) can be useful in
CC detecting olfactory receptor genes, and in typing a subject according to
CC the presence or absence of olfactory receptor genes. The olfactory
CC receptor gene cluster is located on human chromosome 17p13.3. The
CC oligonucleotides (I) may also be used to detect/diagnose male
CC infertility, specifically that associated with reduced sperm motility or
CC to detect specific odorants that may enhance or suppress sperm motility.
CC The present sequence represents a specifically claimed oligonucleotide
CC used in the identification of an olfactory receptor gene, which is used
CC in the exemplification of the present invention.

XX
CC The invention relates to a kit for diagnosing and treating T-cell
CC associated diseases which comprises a panel of nucleic acid primers
CC specifically priming and allowing amplification of each Vbeta gene,
CC VbetaRNA or cDNA. The kit is useful for diagnosing organ transplant
CC rejection and diagnosing and treating T-cell associated diseases
CC including autoimmune diseases, degenerative nervous system diseases,
CC graft versus host disease, hypersensitivity diseases, infectious diseases
CC and neoplastic diseases. Autoimmune diseases include Addison's disease,
CC atrophic gastritis. Degenerative nervous system diseases include multiple
CC sclerosis and Alzheimer's disease. Hypersensitivity diseases include Type
CC I hypersensitivities such as contact with allergens that lead to
CC allergies, Type II hypersensitivities such as those present in
CC Goodpasture's syndrome and Type IV hypersensitivities such as those
CC manifested in leprosy. Infectious diseases include viral infections
CC caused by viruses such as HIV, fungal infections such as those caused by
CC the yeast genus Candida, parasitic infections such as those caused by
CC schistosomes, filaria and bacterial infections such as those caused by
CC Mycobacterium. Neoplastic diseases include lymphoproliferative diseases
CC such as leukaemias, lymphomas and cancers such as cancer of the brain,
CC breast. The present sequence represents a Vbeta gene repeat sequence.

PT Determining a predisposition for or the occurrence of neurodegenerative
PT disease, particularly Alzheimer's disease, comprises determining the
PT presence of a polymorphism in the uPA, SNCG, IDE, KNSL1, LIPA or TNFRSF6
PT gene.
XX
PS Example 3; SEQ ID NO 150; 205pp; English.
XX
CC This invention relates to a novel method of determining a predisposition
CC for or the occurrence of neurodegenerative disease comprising detecting
CC in a target nucleic acid obtained from the subject the presence of an
CC allelic variant of polymorphic regions of human genes selected from
CC urokinase plasminogen activator (uPA), gamma-synuclein (SNCG), insulin
CC degrading enzyme (IDE), kinesin-like protein 1 (KNSL1), lysosomal acid
CC lipase (LIPA) and tumour necrosis factor receptor SF6 (TNFRSF6). The
CC method is useful in determining the presence or predisposition to a
CC neurodegenerative disease, particularly Alzheimer's disease. The present
CC sequence is that of a sequencing primer which was used for sequencing of
CC a region of the human IDE gene in the exemplification of the invention.

PT Identifying a subject at risk of melanoma, useful for treating melanoma,
PT comprises detecting the presence or absence of one or more polymorphic
PT variations associated with melanoma in a nucleic acid sample from a
PT subject.
XX
PS Example 5; Page 84; 295pp; English.
XX
CC The invention relates to a method of identifying a subject at risk of
CC melanoma comprising detecting the presence or absence of one or more
CC polymorphic variations associated with melanoma in a nucleic acid sample
CC from a subject. Preventing melanoma in a subject comprises detecting the
CC presence or absence of one or more polymorphic variations associated with
CC melanoma in a nucleic acid sample from a subject; and administering a
CC melanoma preventative to a subject in need thereof based upon the
CC presence or absence of the one or more polymorphic variations in the
CC nucleic acid sample. The preventative reduces ultraviolet (UV) light
CC exposure to the subject. The methods, nucleic acids, proteins, and
CC compositions are useful for treating melanoma. The present sequence
CC represents a human cyclin-dependent kinase 10, CDK10, proximal SNP probe.

PT   Peptides having at least two new nucleotides - useful as primers in RT-
PT   PCR.
XX
PS   Example 1; Page 12; 19pp; Japanese.
XX
CC   This sequence represents a primer of the invention. The invention relates
CC   to sequences of at least two nucleotides of formula: (X)m5'-(alpha)n-beta
CC   -N3'; or (X)m5'-(gamma)k-delta-N3'; where X = a labelled compound and/or
CC   a nucleotide with voluntary sequence; m = 0 or 1; alpha = thymine; n =
CC   natural number indicating the repetition of alpha; beta, delta = V or N;
CC   V = adenine, guanine or cytosine; N = adenine, guanine, cytosine or
CC   thymine; gamma = thymine; k = natural number of 3 or over indicating the
CC   repetition of gamma, in which thymine expressed by gamma is composed of
CC   1/3 or less of adenine, guanine and/or cytosine. The new nucleotides are
CC   useful as primers for RT-PCR and determination of base sequences. The new
CC   sequences allow for reproductive and highly efficient analysis of gene
CC   sequences

PT   Polynucleotide encoding LUNX gene product useful for the detection of
PT   cancer especially micrometastatic cancer.
XX
PS   Example 1; Page 27; 30pp; Japanese.
XX
CC   This invention relates to the human LUNX protein and the polynucleotide
CC   sequence encoding it. The invention includes a vector containing a LUNX
CC   polynucleotide, a host cell transformed with the vector, and an antibody
CC   that binds to LUNX. The gene can be used for cancer diagnosis and
CC   diagnosis of micrometastatic cancer and for the production of the LUNX
CC   gene product. The present sequence represents a primer used in the
CC   isolation of cDNA encoding human LUNX

PT Identifying and detecting nucleic acids, particularly DNA hybridization
PT probes, involves employing chain extending enzymes (e.g. telomerase) to
PT elongate probes to render them readily detectable.
XX
PS Example 1; Page 5; 10pp; English.
XX
CC The present invention describes a method for detecting a nucleic acid
CC probe, which comprises using chain extending enzymes to elongate probes.
CC The method comprises: (a) treating the sample with a chain terminating
CC reagent to prevent polynucleotide chain growth from the nucleic acid in
CC the sample; (b) contacting the sample with the probe containing a
CC terminus capable of elongation by a chain extending enzyme, where the
CC probe hybridises to the nucleic acid in the sample; (c) contacting the
CC sample with a chain extending enzyme and its substrates, which elongates
CC the probe; and (d) detecting the elongated hybridised probe. Also
CC described is a method comprising: (a) treating nucleic acid molecules or
CC modified nucleic acids in a sample with a reagent or reagents that render
CC the nucleic acid chains unextendable by a non-template-dependent enzyme;
CC (b) hybridising the treated molecules with a nucleic acid probe that
CC includes an extendable terminus, under conditions where hybrids form; and
CC (c) treating any hybrids formed with a non-template dependent chain
CC elongating enzyme and its substrates, where any hybridised probe is
CC extended. The method is useful for identifying and detecting nucleic
CC acids, particularly DNA hybridisation probes. The present sequence
CC represents a tailing reaction exemplary primer, which is used in an
CC example from the present invention

PT Pharmaceutical composition for treating ailments associated with impaired
PT respiration, has oligo(s) antisense to specific gene(s) or its
PT corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
PT ubiquinone.
XX
PS Claim 15; SEQ ID NO 911; 872pp; English.
XX
CC The invention relates to a novel pharmaceutical composition, which has a
CC first active agent comprising an oligonucleotide antisense to the
CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
CC junctions of genes encoding a polypeptide associated with lung and/or
CC nasal airway dysfunction and a second active agent comprising an
CC antiinflammatory steroid and ubiquinone. A composition of the invention
CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
CC immunosuppressive, and cytostatic activity. The composition may have a
CC use in antisense gene therapy. The composition is useful for treating or
CC preventing a respiratory, lung or malignant disease or condition, also
CC for enhancing the prophylactic or therapeutic respiratory effect of an
CC antiinflammatory steroid in a subject, for reducing or depleting levels
CC of, or reducing sensitivity to adenosine, reducing levels of adenosine
CC receptor, producing bronchodilation, increasing levels of ubiquinone or
CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
CC lung inflammation, lung allergies, or a respiratory disease or condition.

XX
PT Pharmaceutical composition for treating asthma, has antisense
PT oligonucleotide containing less percentage of adenosine, targeted to
PT nucleic acids associated with lung airway or lung dysfunction, and
PT bronchodilating agent.
XX
PS Claim 15; SEQ ID NO 911; 763pp; English.
XX
CC This invention describes a novel composition (a) a first active agent,
CC comprising oligonucleotides, effective for alleviating
CC bronchoconstriction, respiratory tract inflammation, allergies and
CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC surfactant depletion or hyposecretion, when administered to a mammal. The
CC oligonucleotides are derived from a gene encoding or regulating
CC expression of a target polypeptide associated with lung airway or lung
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC The invention also describes a kit, that comprises: (a) a delivery
CC device, in separate containers, (b) the oligonucleotides, (c)
CC instructions for adding a carrier and for use of the kit. The composition
CC of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC beta-adrenergic agonist. The composition is useful for preventing or
CC treating a respiratory, lung or malignant disease. The administered
CC composition comprises oligo and is administered to reduce the production
CC or availability, or to increase the degradation of the target mRNA or to
CC reduce the amount of target polypeptide present in the lungs. The
CC pulmonary obstruction, and/or bronchoconstriction and/or lung
CC inflammation, allergies and/or surfactant hypoproduction are associated
CC with a disease or condition such as pulmonary vasoconstriction,
CC inflammation, allergies, asthma, impeded respiration, respiratory
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
CC transplantation rejection, pulmonary infections, bronchitis or cancer.
CC The reduced adenosine content of the anti-sense oligos corresponding to
CC thymidines present in the target RNA serves to prevent the breakdown of
CC the oligonucleotides into products that free adenosine into the system
CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
CC prevent any unwanted effects due to it

XX
PT Determining the concentration of a target nucleic acid, useful e.g. for
PT detecting genetic mutations, comprises using a fluorescently labeled
PT probe in which emission is reduced by binding to the target nucleic acid.
XX
PS Example 6; Page 23; 55pp; English.
XX
CC The invention relates to the determination of the concentration of a
CC nucleic acid target, using a fluorescently labeled probe which produces
CC reduced fluorescence emission when hybridised to the target nucleic acid.
CC The method comprises measuring the reduction in emission caused by
CC hybridisation. The new method is particularly used to quantify target
CC nucleic acids by a real-time polymerase chain reaction, e.g. for
CC quantifying microbial cells in co-cultures or symbiotic systems, for
CC detecting gene mutations or polymorphisms, and for analysing melting
CC curves of target nucleic acids to determine a Tm value. Methods of the
CC invention allow target nucleic acids to be quantified quickly, easily and
CC accurately. Particularly there is no need to remove unbound probe, and no
CC materials are introduced that inhibit amplification by Taq polymerase (so
CC conventional PCR conditions can be used). The specificity of PCR is kept
CC high (amplification of primer dimers is delayed), and the limit of
CC quantitation is reduced. Complex probes are not needed, and amplification
CC can be monitored in real time. The working graph for data analysis
CC (automatically generated by a computer) has a higher correlation
CC coefficient than conventional graphs so more accurate quantitation is
CC possible. The current sequence represents a nucleic acid probe of the
CC invention that was used for investigating the effects or the numbers of
CC G(s) in each target nucleic acid, and the number of G(s) in its
CC corresponding invention nucleic acid probe

PT Determining the concentration of a target nucleic acid, useful e.g. for
PT detecting genetic mutations, comprises using a fluorescently labeled
PT probe in which emission is reduced by binding to the target nucleic acid.
XX
PS Example 6; Page 23; 55pp; English.
XX
CC The invention relates to the determination of the concentration of a
CC nucleic acid target, using a fluorescently labeled probe which produces
CC reduced fluorescence emission when hybridised to the target nucleic acid.
CC The method comprises measuring the reduction in emission caused by
CC hybridisation. The new method is particularly used to quantify target
CC nucleic acids by a real-time polymerase chain reaction, e.g. for
CC quantifying microbial cells in co-cultures or symbiotic systems, for
CC detecting gene mutations or polymorphisms, and for analysing melting
CC curves of target nucleic acids to determine a Tm value. Methods of the
CC invention allow target nucleic acids to be quantified quickly, easily and
CC accurately. Particularly there is no need to remove unbound probe, and no
CC materials are introduced that inhibit amplification by Taq polymerase (so
CC conventional PCR conditions can be used). The specificity of PCR is kept
CC high (amplification of primer dimers is delayed), and the limit of
CC quantitation is reduced. Complex probes are not needed, and amplification
CC can be monitored in real time. The working graph for data analysis
CC (automatically generated by a computer) has a higher correlation
CC coefficient than conventional graphs so more accurate quantitation is
CC possible. The current sequence represents a synthetic
CC deoxyribooligonucleotide that was used for investigating the effects of
CC the number of G(s) in each target nucleic acid, and the number of G(S) in
CC its corresponding invention nucleic acid probe

PS Disclosure; SEQ ID NO 4961; 872pp; English.
XX
CC The invention relates to a novel pharmaceutical composition, which has a
CC first active agent comprising an oligonucleotide antisense to the
CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
CC junctions of genes encoding a polypeptide associated with lung and/or
CC nasal airway dysfunction and a second active agent comprising an
CC antiinflammatory steroid and ubiquinone. A composition of the invention
CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
CC immunosuppressive, and cytostatic activity. The composition may have a
CC use in antisense gene therapy. The composition is useful for treating or
CC preventing a respiratory, lung or malignant disease or condition, also
CC for enhancing the prophylactic or therapeutic respiratory effect of an
CC antiinflammatory steroid in a subject, for reducing or depleting levels
CC of, or reducing sensitivity to adenosine, reducing levels of adenosine
CC receptor, producing bronchodilation, increasing levels of ubiquinone or
CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
CC lung inflammation, lung allergies, or a respiratory disease or condition.
CC Note: The sequence data for this patent is not represented in the printed
CC specification, but was obtained in electronic format directly from WIPO

PT Pharmaceutical composition for treating asthma, has antisense
PT oligonucleotide containing less percentage of adenosine, targeted to
PT nucleic acids associated with lung airway or lung dysfunction, and
PT bronchodilating agent.
XX
PS Claim 15; SEQ ID NO 4961; 763pp; English.
XX
CC This invention describes a novel composition (a) a first active agent,
CC comprising oligonucleotides, effective for alleviating
CC bronchoconstriction, respiratory tract inflammation, allergies and
CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC surfactant depletion or hyposecretion, when administered to a mammal. The
CC oligonucleotides are derived from a gene encoding or regulating
CC expression of a target polypeptide associated with lung airway or lung
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC The invention also describes a kit, that comprises: (a) a delivery
CC device, in separate containers, (b) the oligonucleotides, (c)
CC instructions for adding a carrier and for use of the kit. The composition
CC of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC beta-adrenergic agonist. The composition is useful for preventing or
CC treating a respiratory, lung or malignant disease. The administered
CC composition comprises oligo and is administered to reduce the production
CC or availability, or to increase the degradation of the target mRNA or to
CC reduce the amount of target polypeptide present in the lungs. The
CC pulmonary obstruction, and/or bronchoconstriction and/or lung
CC inflammation, allergies and/or surfactant hypoproduction are associated
CC with a disease or condition such as pulmonary vasoconstriction,
CC inflammation, allergies, asthma, impeded respiration, respiratory
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
CC transplantation rejection, pulmonary infections, bronchitis or cancer.
CC The reduced adenosine content of the anti-sense oligos corresponding to
CC thymidines present in the target RNA serves to prevent the breakdown of
CC the oligonucleotides into products that free adenosine into the system
CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
CC prevent any unwanted effects due to it

PT   Sorting single-stranded nucleic acid, useful for analyzing expression
PT   patterns and screening active agents, uses capture agent with variable
PT   and constant regions.
XX
PS   Example; Page 5; 8pp; German.
XX
CC   This invention describes a novel method for sorting single-stranded
CC   nucleic acids by isolation and hybridisation of nucleic acid pools, then
CC   reading out, where the nucleic acids are selectively bound using capture
CC   agents that are (a) immobilised on the surface of a solid matrix and (b)
CC   comprise variable and non-variable regions. The capture oligonucleotides
CC   have a 5'-invariable anchor region, the complement of which is present at
CC   least once in each nucleic acid and a 3'-variable, discriminatory region
CC   that comprises all possible combinations of up to 10 nucleotides to allow
CC   binding of particular sorts of single stranded nucleic acids. The capture
CC   agents are particularly locked nucleic acids (LNA) and the anchor region
CC   comprises a sequence of 10-50, particularly 15-25, T residues. The
CC   capture oligonucleotides are biotinylated and immobilised on a surface by
CC   interaction with streptavidin. The matrix is of plastic, ceramic, glass,
CC   metal, resin, gel, crystalline material and/or membrane, having semi-
CC   conducting properties and especially in the form of a chip. Its surface
CC   is particularly a layer of (bio)molecular filaments and binding of single
CC   stranded nucleic acids to the surface is (quasi)covalent, supramolecular,
CC   physical, stimulated by an electrical field or through a molecular sieve.
CC   The method is used (i) for analysis of patterns, especially in mucosal,
CC   hair root, blood, nerve or germ cells and (ii) for determining the
CC   activity of pharmaceuticals and/or nutritional compounds, e.g. food
CC   additives or supplements, especially minerals, trace elements, organic
CC   acids (amino, carboxylic or fatty acid) or their derivatives, salts and
CC   mixtures. The method provides rapid, inexpensive and reproducible
CC   representation of differences in pools of nucleic acids from cells. It
CC   allows imaging of the complete pattern of all nucleic acid in a cell, and
CC   can detect very small differences in the nucleic acid pool. Since the
CC   method is based on comparison of nucleic acid pools, not individual
CC   genes, matrix miniaturisation is possible. ADK01281-ADK01344 represent
CC   capture probes used in the method of the invention.

PT Identifying a candidate polymorphic repeat within a coding sequence, for
PT understanding or treating genetic disease, comprises detecting tandem
PT repeats in a target coding sequence and scoring the repeats for
PT polymorphic probability.
XX
PS Example; Col 483; 588pp; English.
XX
CC The invention discloses a method for identifying a candidate polymorphic
CC repeat within a coding sequence (expressed sequence tag, EST), which
CC comprises detecting tandem repeats in a target coding sequence, scoring
CC the repeats for polymorphic probability and generating a dataset
CC correlating the repeats with polymorphic probability to identify a
CC candidate polymorphic repeat. The computational methods (polymorphic
CC marker prediction of ubiquitous simple sequences, POMPOUS, and Rep-X) are
CC useful for identifying and detecting candidate polymorphic repeats in
CC human genes, which can be used to understand, treat or eliminate genetic
CC diseases, predispositions or adverse drug-treatment reactions. Examples
CC of diseases linked to nucleotide repeats are Machado-Joseph, Haw River
CC syndrome, Huntington's disease, fragile-X syndrome, Fredreich's ataxis,
CC myotonic dystrophy, hyperandrogenaemia, spinal and bulbar atrophy and
CC spinocerebellar ataxia. The sequences presented in ABX79676-ABX80022 are
CC the polymorphic repeats identified for a search of human ESTs

PT New zinc finger-containing proteins and nucleic acids, useful in
PT manufacturing a medicament for treating or preventing a disorder
PT associated with decreased or increased expression or activity of MDZ3,
PT MDZ4, MDZ7 or MDZ12, e.g. cancer.
XX
PS Example 8; SEQ ID NO 5256; 103pp; English.
XX
CC The present invention relates to novel human zinc finger-containing
CC proteins and their coding sequences: MDZ3, MDZ4, MDZ7, MDZ12. MDZ3 is
CC encoded at chromosome 7q22.1, MDZ4 is encoded at chromosome 6p21.3-22.2,
CC MDZ7 is encoded at chromosome 16p11.2 and MDZ12 is encoded at chromosome
CC 15q26.1. The MDZ3, MDZ4, MDZ7, and MDZ12 sequences are useful in therapy,
CC or in manufacturing a medicament for treating or preventing a disorder
CC associated with decreased or increased expression or activity of MDZ3,
CC MDZ4, MDZ7, or MDZ12, e.g. cancer or developmental disorders. The nucleic
CC acids and proteins are also useful for diagnosing or monitoring a disease
CC caused by altered expression of MDZ3, MDZ4, MDZ7, or MDZ12. The nucleic
CC acids can also be used as probes to detect and characterize gross
CC alterations in MDZ3, MDZ4, MDZ7, or MDZ12 genetic locus. The probes are
CC useful in constructing microarrays for measuring gene expression. The

```
CC   proteins are useful as therapeutic agents for gene therapy or as
CC   vaccines. The present sequence was used to illustrate the invention.

PT   Sensor array system for remote characterizing gaseous or vapor sample,
PT   has sensors having nucleic acid/fluorophore combination, measuring
PT   apparatus, transmitting device and computer having algorithm for
PT   characterizing analyte.
XX
PS   Disclosure; SEQ ID NO 10; 91pp; English.
XX
CC   The invention relates to a sensor array system for remote characterizing
CC   gaseous or vapor sample, has several sensors providing detectable signal
CC   on contacting analyte and each sensor has nucleic acid/fluorophore
CC   combination, measuring apparatus measures detectable signal, transmitting
CC   device transmits information with respect to detectable signal to remote
CC   location through internet, and computer having residential algorithm for
CC   characterizing analyte. (I) is useful in monitoring chemical hazards, air
CC   quality, and medical conditions, and detecting explosives, mines, and
CC   hazardous chemicals. (I) or (II) is useful in transmitting identified
CC   information on various odors or smells, e.g., vapor or gaseous analytes
CC   through internet. This sequence represents an oligonucleotide used in the
CC   method of the invention.

PT Determining the concentration of a target nucleic acid, useful e.g. for
PT detecting genetic mutations, comprises using a fluorescently labeled
PT probe in which emission is reduced by binding to the target nucleic acid.
XX
PS Example 5; Page 21; 55pp; English.
XX
CC The invention relates to the determination of the concentration of a

```
CC   nucleic acid target, using a fluorescently labeled probe which produces
CC   reduced fluorescence emission when hybridised to the target nucleic acid.
CC   The method comprises measuring the reduction in emission caused by
CC   hybridisation. The new method is particularly used to quantify target
CC   nucleic acids by a real-time polymerase chain reaction, e.g. for
CC   quantifying microbial cells in co-cultures or symbiotic systems, for
CC   detecting gene mutations or polymorphisms, and for analysing melting
CC   curves of target nucleic acids to determine a Tm value. Methods of the
CC   invention allow target nucleic acids to be quantified quickly, easily and
CC   accurately. Particularly there is no need to remove unbound probe, and no
CC   materials are introduced that inhibit amplification by Taq polymerase (so
CC   conventional PCR conditions can be used). The specificity of PCR is kept
CC   high (amplification of primer dimers is delayed), and the limit of
CC   quantitation is reduced. Complex probes are not needed, and amplification
CC   can be monitored in real time. The working graph for data analysis
CC   (automatically generated by a computer) has a higher correlation
CC   coefficient than conventional graphs so more accurate quantitation is
CC   possible. The current sequence represents a nucleic acid probe of the
CC   invention that was used for investigating the base selectivity of a
CC   target nucleic acid

PT   Functionalized nanocrystal carrying polynucleotide, used for detecting
PT   target analyte, forms dendrimers with complementary nanocrystals to
PT   amplify the fluorescent signal.
XX
PS   Example 3; Page 68; 72pp; English.
XX
CC   The present invention relates to functionalised nanocrystals for use in
CC   nonisotopic detection systems for biomolecules e.g. nucleic acids,
CC   proteins, lipids or drugs. The nanocrystals have polynucleotide strands
CC   attached to their surfaces with one end of the polynucleotide extending
CC   outwardly from the nanocrystal. The present sequence is one such
CC   polynucleotide. These nanocrystals are used with a second series of
CC   nanocrystals, which have polynucleotides complementary to the first
CC   polynucleotides, so that the respective complementary strands hybridise
CC   to each other and form a dendrimer. This dendrimer produces a signal
CC   which can then be detected e.g. fluorescence. The present sequence is
CC   composed mainly of Adenine bases. This sequence may therefore be used
CC   with a polynucleotide composed mainly of Thymine bases (AAA58386)

PT   New antisense oligonucleotides targeted to nucleic acids encoding human
PT   stearoyl-CoA desaturase, useful for treating diseases associated with the
PT   desaturase, e.g. atherosclerosis, and in diagnostic and research
PT   applications.
XX
PS   Example 15; Page 94; 117pp; English.
XX
CC   The present invention describes a compound (I) that is 8-50 nucleobases
CC   in length targeted to a nucleic acid molecule encoding human stearoyl-CoA
CC   desaturase, and which specifically hybridises with and inhibits the
CC   expression of human stearoyl-CoA desaturase, or which specifically
CC   hybridises with at least an 8-nucleobase portion of an active site on a
CC   nucleic acid molecule encoding human stearoyl-CoA desaturase. Human
CC   stearoyl-CoA desaturase is mapped to chromosome 10. (I) has antilipaemic,
CC   cardiovascular, antiarteriosclerotic, cytostatic and antiinflammatory
CC   activities, and can be used in antisense therapy. The antisense compounds
CC   (I) can be used for modulating the expression of human stearoyl-CoA
CC   desaturase and for treating diseases or conditions associated with
CC   expression of human stearoyl-CoA desaturase, e.g. abnormal lipid or
CC   cholesterol metabolism, atherosclerosis, or cardiovascular diseases. The
CC   antisense compounds (I) can also be used for diagnostics, therapeutics
CC   and prophylaxis, e.g. to prevent or delay infection, inflammation or
CC   tumour formation, as research reagents and kits, and in distinguishing
CC   between functions of various members of a biological pathway. The present
CC   sequence represents a human stearoyl-CoA desaturase inhibiting chimeric
CC   phosphorothioate antisense oligonucleotide, which is given in an example
CC   from the present invention

PT   New X-chromosome gene expressed in haploid cells of the testis, useful
PT   for gene diagnosis, discrimination of sex, separation of sperm,
PT   infertility treatment and chromosomal manipulation.
XX
```

PS Example 1; Page 4; 28pp; English.
XX
CC The present invention relates to genes located on the X-chromosome of
CC mammals. These genes are specifically expressed in haploid cells of the
CC testis and encode amino acid sequences having homology with the amino
CC acid sequence encoded by drosophila germ cell less (gcl) gene. Sequences
CC of the invention are used for gene diagnosis, discrimination of sex,
CC separation of sperm, infertility treatment and chromosomal manipulation,
CC especially in livestock. They are also used in gene therapy. The present
CC DNA sequence is a PCR primer which is used for the identification of
CC genes by differential display method

PT New antisense oligonucleotides targeted to nucleic acid encoding Protein
PT Phosphatase 2 catalytic subunit beta, useful for treating diseases
PT related to Protein Phosphatase 2 catalytic subunit beta expression, such
PT as cancer.
XX
PS Example 16; Page 98; 137pp; English.
XX
CC The invention relates to a novel compound 8-50 nucleotides in length
CC targeted to a nucleic acid molecule encoding a protein phosphatase 2
CC catalytic beta subunit, where the compound specifically hybridises with
CC and inhibits the expression of protein phosphatase 2 catalytic beta
CC subunits, or specifically hybridises with at least an 8-nucleotide
CC portion of an active site on a nucleic acid molecule encoding a protein
CC phosphatase 2 catalytic beta subunit. The antisense compounds are useful
CC for modulating the expression of protein phosphatase 2 catalytic beta
CC subunits and for treating diseases or conditions associated with
CC expression of protein phosphatase 2 catalytic beta subunits, e.g.
CC aberrant insulin regulation or diabetes or a hyperproliferative disorder,
CC particularly cancer. The antisense compounds are also useful for
CC diagnostics, therapeutics, prophylaxis, e.g. to prevent or delay
CC infection, inflammation or tumour formation, as research reagents and
CC kits, and in distinguishing between functions of various members of a
CC biological pathway. This polynucleotide sequence represents an
CC oligonucleotide inhibitor of rat protein phosphatase 2 catalytic beta
CC subunit mRNA levels of the invention. NOTE: This oligonucleotide contains
CC phosphorothioate residues and has 2'- MOE wings with a deoxy gap

PT Analysis of DNA fragment - comprises addition of known common
PT oligonucleotide, amplification of resultant DNA fragment and analysis and
PT labelling of amplified DNA.
XX
PS Example 1; Page 12; 17pp; Japanese.
XX
CC This invention descibes a novel method for the analysis of a DNA fragment
CC which comprises: (i) addition of a known common oligonucleotide sequence
CC to at least one terminal of each DNA fragment, (ii) amplification of the
CC resultant DNA fragment as a primer using a first common primer containing
CC a complementary nucleotide sequence to the above mentioned known common
CC oligonucleotide sequence, a second common primer containing a
CC complementary nucleotide sequence to the prepared known common
CC oligonucleotide sequence optionally having been introduced with
CC complementary nucleotide sequence at a terminal, and a specific primer
CC capable of hybridisation with a DNA fragment containing whole or part of
CC the gene having known sequence, to give amplified DNA, (iii) analysis of
CC the amplified DNA to find the information of the DNA fragment, in which
CC the specific primer is designed to prepare fragments of the common first
CC and second primers and to give short fragment of amplified DNA and (iv)
CC labelling them to make their differentiation. Differentiation of
CC informations of known and unknown genes readily provides information of
CC unknown gene and simultaneous monitoring of signals derived from minor
CC genes. Furthermore, labelling of DNAs according to functions of known
CC genes can be performed. AAZ09189-Z09201 represent oligonucleotide primers
CC used to illustrate the method of the invention

PT Pharmaceutical composition for treating ailments associated with impaired
PT respiration, has oligo(s) antisense to specific gene(s) or its
PT corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
PT ubiquinone.
XX
PS Disclosure; SEQ ID NO 5114; 872pp; English.
XX
CC The invention relates to a novel pharmaceutical composition, which has a
CC first active agent comprising an oligonucleotide antisense to the
CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
CC junctions of genes encoding a polypeptide associated with lung and/or
CC nasal airway dysfunction and a second active agent comprising an
CC antiinflammatory steroid and ubiquinone. A composition of the invention
CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
CC immunosuppressive, and cytostatic activity. The composition may have a
CC use in antisense gene therapy. The composition is useful for treating or
CC preventing a respiratory, lung or malignant disease or condition, also
CC for enhancing the prophylactic or therapeutic respiratory effect of an
CC antiinflammatory steroid in a subject, for reducing or depleting levels
CC of, or reducing sensitivity to adenosine, reducing levels of adenosine
CC receptor, producing bronchodilation, increasing levels of ubiquinone or
CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
CC lung inflammation, lung allergies, or a respiratory disease or condition.
CC Note: The sequence data for this patent is not represented in the printed
CC specification, but was obtained in electronic format directly from WIPO

PT Pharmaceutical composition for treating asthma, has antisense
PT oligonucleotide containing less percentage of adenosine, targeted to
PT nucleic acids associated with lung airway or lung dysfunction, and
PT bronchodilating agent.
XX
PS Claim 15; SEQ ID NO 5114; 763pp; English.
XX
CC This invention describes a novel composition (a) a first active agent,
CC comprising oligonucleotides, effective for alleviating
CC bronchoconstriction, respiratory tract inflammation, allergies and
CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC surfactant depletion or hyposecretion, when administered to a mammal. The
CC oligonucleotides are derived from a gene encoding or regulating
CC expression of a target polypeptide associated with lung airway or lung
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC The invention also describes a kit, that comprises: (a) a delivery
CC device, in separate containers, (b) the oligonucleotides, (c)
CC instructions for adding a carrier and for use of the kit. The composition
CC of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC beta-adrenergic agonist. The composition is useful for preventing or
CC treating a respiratory, lung or malignant disease. The administered
CC composition comprises oligo and is administered to reduce the production
CC or availability, or to increase the degradation of the target mRNA or to
CC reduce the amount of target polypeptide present in the lungs. The
CC pulmonary obstruction, and/or bronchoconstriction and/or lung
CC inflammation, allergies and/or surfactant hypoproduction are associated
CC with a disease or condition such as pulmonary vasoconstriction,

```
CC   inflammation, allergies, asthma, impeded respiration, respiratory
CC   distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC   hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
CC   transplantation rejection, pulmonary infections, bronchitis or cancer.
CC   The reduced adenosine content of the anti-sense oligos corresponding to
CC   thymidines present in the target RNA serves to prevent the breakdown of
CC   the oligonucleotides into products that free adenosine into the system
CC   e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
CC   prevent any unwanted effects due to it

PT New BAP28 polynucleotides and polypeptides overexpressed in prostate
PT cancer cells for diagnosing prostate tumors, e.g. by hybridization or
PT polymerase chain reaction assays.
XX
PS Example; Page 347; 349pp; English.
XX
CC The invention is directed to BAP28 polypeptides, BAP28 polynucleotide
CC sequences and regulatory region located at the 3' and 5' ends of the
CC BAP28 coding region. The BAP28 polypeptides can be expressed by standard
CC recombinant methodology. BAP28 polynucleotides and polypeptides have been
CC found to be over expressed in prostate tumour cells, therefore levels of
CC BAP28 expression and/or activity may be assayed (e.g. by polymerase chain
CC reaction (PCR)) to diagnose patient suffering from or susceptible to
CC prostate cancer. Antibodies specific for the BAP28 polypeptides are
CC useful as diagnostic reagents. Biallelic markers of the BAP28 gene are
CC useful in genetic analysis. Sequences AAF83934-963 represent primers for
CC the BAP28 gene and PCTA-1 gene (the coding strand of PCTA-1 gene is on
CC the opposite of the coding strand of BAP28)

XX
CC The present invention relates to an antisense compound targeted to a
CC nucleic acid molecule encoding Nav1.3, where the antisense compound
CC specifically hybridizes with and inhibits the expression of Nav1.3. The
CC compound and composition are useful for treating a disease or condition
CC associated with Nav1.3, e.g. pain including but not limited to
CC neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain,
CC diabetic neuropathy, trigeminal neuropathy, arthritic pain, acute pain,
CC pain from burns, migraine headache, cluster headache, mild-to-moderate
CC headache; seizure disorder such as childhood seizure disorder, including
CC but not limited to neonatal or infantile epilepsy; or ataxia. The present
CC sequence represents a chimeric phosphorothioate oligonucleotide with
CC 2'MOE wings and a deoxy gap. Used during the antisense inhibition of
CC human Nav1.3 expression, the oligonucleotides are designed to target
CC different regions of the human Nav1.3 RNA.

PT New antisense compound, having a sequence targeted to a nucleic acid
PT encoding mPGES-1, useful for preparing a composition for treating e.g.,
PT inflammation, Alzheimer's disease, arthritis, diabetes, cancer or
PT ischemia.
XX
PS Claim 4; SEQ ID NO 938; 132pp; English.
XX
CC The present sequence represents a chimeric antisense oligonucleotide
CC targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The
CC human mPGES-1 gene is located on chromosome 9, more specifically to
CC 9q34.3. The present invention also describes: (1) antisense compounds,
CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding
CC mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and
CC inhibits its expression; (2) a method of inhibiting the expression of
CC mPGES-1 in cells or tissues; and (3) a method of treating an animal
CC having a disease or condition associated with mPGES-1. MPGES-1 chimeric
CC antisense oligonucleotides and antisense compounds have cytostatic,
CC antidiabetic, immunomodulator, cardiant, neuroprotective,
CC antiinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic,
CC ophthalmological, immunomodulatory and cardiovascular activities, and can
CC be used as mPGES-1 inhibitors and in gene therapy. The antisense compound
CC can be used for preparing a composition for treating a disease or
CC condition associated with mPGES-1 e.g., inflammation, Alzheimer's
CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or
CC ophthalmic, immunological, cardiovascular or neurological disorder.

PT Isolated nucleic acid molecules having polymorphisms in known human genes
PT e.g. cytochrome p450 and cathepsin S useful as genetic linkage markers
PT for locating, identifying and characterizing the genes responsible for
PT disorder-related traits.
XX
PS Example 28; Page 159; 714pp; English.
XX
CC This invention relates to the sequence of an isolated nucleic acid
CC molecule comprising at least one base variation from that of a known
CC human cytochrome P450 A1 (CYP4501A1), cytochrome P450 A2 (CYP4501A2),
CC cytochrome P450 02E1 (CYP45002E1), adrenergic receptor beta1 (ADBR1),
CC aryl hydrocarbon (AHR), aryl hydrocarbon receptor nuclear translocator
CC (ARNT), cathepsin S (CTSS), cyclooxgenase 2 (COX2), diazepam binding
CC inhibitor (DBI), epoxide hydroxylase 2 (EPHX2), 5-lipoxygenase activating
CC protein (FLAP), glutathione-S-transferase 12 (GST12), histamine-N-methyl
CC transferase (HNMT), (kallikrein 2) KLK2, nicotinamide -N-methyl
CC transferase (NNMT), NADPH quinone oxidoreductase 2 (NQO2),
CC sulfotransferase thermolabile (STM), UDP-glucuronosyl transferase 2B4
CC (UGT2B4), UDP-glucuronosyl transferase 2B7 (UGT2B7), UDP-glucuronosyl
CC transferase (UGT2B15), urokinase receptor (uPA), multidrug resistance 1
CC (MDR1), lactotransferrin (LTF), multidrug resistance associated protein 3
CC (MRP3), orphan nuclear receptor (NR1I2), or acetylcholine muscarinic
CC receptor 1, 2, 3, 4, or 5 (CHMR1, CHMR2, CHMR3, CHMR4 or CHMR5) sequence.
CC The polymorphisms in the human genes cited in the invention are useful as
CC genetic linkage markers for locating and characterising the genes that
CC are responsible for specific traits within the genome and eventually
CC identifying the genes responsible for a variety of disorder-related
CC traits as a result of their e.g., overexpression, constitutive
CC expression, mutation or underexpression, which may be used in diagnosing
CC and/or treating the disorders. The nucleic acid molecules comprising the
CC polymorphic sequences contained in CYP4501A1, CYPP4501A2, CYP4502E1,
CC ARNT, EPHX2, GST12, NNMT, NQO2, NR1I2, STM, UGT2B4, UGT2B7, UGT2B15, AHR,
CC MDR1 and/or MDR3 are useful for screening individuals for altered drug
CC metabolism. The polymorphic sequences contained in CYP4501A1, CYPP4501A2,
CC AHR, MDR1 and/or MDR3 may also be used to screen individuals for
CC susceptibility to cancer. Polymorphic sequences in ADRB1 or CHMR2 are
CC used to screen for altered cardiovascular function, in COX2 for altered
CC susceptibility to colorectal tumours, in DBI or CHMR1 for altered central
CC nervous system function, in FLAP and HNMT for altered pulmonary,
CC immunological or haematological function, in KLK2 for altered serine
CC protease activity in the prostate, in LTF for altered immunological or
CC haematological function, in CHMR3, CHMR4 or CHMR5 for altered central and
CC peripheral nervous system function. The present sequence represents a
CC polymorphic DNA sequence of the invention

PT   Sensitively detecting proximity changes in a system that utilizes an
PT   interacting fluorophore and quencher, for high sensitivity applications,
PT   involves utilizing a metal surface as quencher.
XX
PS   Example 3; Page 30; 62pp; English.
XX
CC   The present sequence is that of a single mismatch target sequence for a
CC   molecular beacon comprising an oligonucleotide probe (see ABL57069)
CC   covalently attached at the 3' end to fluorescent dye and at the 5' end to
CC   a nanoparticle. In the native state, the probe forms a hairpin
CC   conformation with hybridised termini. The proximity of the fluorophore
CC   and quencher (gold nanoparticle) in the molecular beacon results in
CC   little or no detectable fluorescence. Upon hybridisation of the central
CC   complementary stretch of the probe to a target sequence, such as the
CC   present sequence, the hairpin undergoes a conformational change resulting
CC   in an increase in fluorescence, the extent of which is proportional to
CC   the amount of target sequence present. Experiments with the present
CC   sequence and a perfectly-matched target (see ABL57071) showed that
CC   hybridisation was very specific to the matched target. The invention
CC   relates generally to the use of metal surface quenchers such as particles
CC   or films for high sensitivity applications in, for example, detection and
CC   diagnostic systems

PT Screening of candidate binding partners for binding to test molecule
PT comprises illuminating sample with light beams and measuring physical
PT properties of nonlinear optical light beam emanating from sample.
XX
PS Disclosure; SEQ ID NO 3; 58pp; English.
XX
CC The invention describes screening a candidate binding partner by
CC illuminating the sample with light beams at fundamental frequencies to
CC binding partners, and measuring physical properties of a nonlinear
CC optical light beam emanating from sample. On binding to the test molecule
CC the properties change relative to that in absence of exposure of the test
CC molecule. The invention is used in the screening of candidate binding
CC partners for binding to test molecule. This sequence represents a
CC molecular beacon analogue, an exemplary test molecule of the invention.

PT Analyzing binding between macromolecules, useful for detecting nucleic
PT acids by hybridization, where a labeled detector molecule is immobilized
PT and becomes fluorescent only after specific binding.
XX
PS Example; Page 6; 11pp; German.
XX
CC The invention relates to a novel analytical method for examining binding
CC events between first and second macromolecules. The method comprises
CC preparing a surface on which a fluorescently-labelled first macromolecule
CC is bound and which is at least partly fitted with a fluorescence-
CC suppressing layer. A sample liquid containing the second macromolecule is
CC applied and fluorescence is measured. The first macromolecule has a
CC secondary structure such that its fluorescence is suppressed by the
CC suppressing layer when it is not specifically bound to the second
CC macromolecule, but fluorescence is not suppressed when the two
CC macromolecules are specifically bound. The method of the invention may be
CC used to detect hybridisation of RNA or, particularly DNA, especially for
CC detecting the presence of particular sequences in samples, but also for
CC studying reaction kinetics. The method allows the use of molecular
CC beacons that are simple to prepare or synthesise, particularly because
CC they do not require incorporation of a quencher. The current sequence is
CC that of the control probe of the invention which is targeted to the
CC fluorescent-labelled and bound DNA oligonucleotide in the binding
CC analysis method.

PT   New oligonucleotides, useful for treating allergy or asthma, viral and
PT   bacterial infections, and cancer, e.g. biliary tract cancer, breast
PT   cancer, cervical cancer.
XX
PS   Example; SEQ ID NO 56; 104pp; English.
XX
CC   The invention relates to a class of CpG immunostimulatory
CC   oligonucleotides containing a 5'TCG motif or a CG at or the 5' end that
CC   are useful for stimulating an immune response. Oligonucleotides and
CC   compositions of the invention are useful for treating allergy or asthma,
CC   viral and bacterial infections and cancer e.g. biliary tract cancer,
CC   breast cancer, cervical cancer, choriocarcinoma, colon cancer,
CC   endometrial cancer, gastric cancer, lymphomas, intraepithelial neoplasms,
CC   liver cancer, lung cancer (e.g. small cell and non-small cell), melanoma,
CC   neuroblastomas, ovarian cancer, pancreatic cancer, prostate cancer,
CC   rectal cancer, sarcomas, thyroid cancer, renal cancer, bone cancer, brain
CC   and CNS cancer, connective tissue cancer, oesophageal cancer, eye cancer,
CC   Hodgkin's lymphoma, larynx cancer, oral cavity cancer, skin cancer,
CC   testicular cancer, as well as other carcinomas and sarcomas. The
CC   invention is also useful in gene therapy. The present sequence is a CpG
CC   immunostimulatory oligonucleotide (DNA-RNA hrbrid).

PT   Assay for a chemical or drug in a sample comprises detecting binding of
PT   an oligonucleotide selected from a set of randomized oligonucleotides.
XX
PS   Disclosure; Col 27-28; 20pp; English.
XX
CC   This invention describes a novel method (I) for specifically detecting a
CC   chemical or drug in a sample comprises contacting the sample with an
CC   oligonucleotide having specific activity for a target biomolecule and
CC   detecting the presence or absence of binding where the presence of
CC   binding indicates the presence of the chemical or drug in the sample. The
CC   oligonucleotide is identified by: (a) assaying a prepared set of
CC   randomized oligonucleotides for activity against a target biomolecule;
CC   (b) separating active from inactive oligonucleotides; (c) recovering the
CC   active oligonucleotides; and (d) characterizing the recovered
CC   oligonucleotides by microanalytical structure determination. The method
CC   can be used for diagnostic or research purposes

PT Obtaining transgenic plant useful for controlling seed germination and
PT seedling growth comprises transgene comprising a sequence expressing
PT altered levels of an essential hormone.
XX
PS Example 17; Page 262; 267pp; English.
XX
CC The present primer was used to reverse transcribe cDNA encoding a C-20
CC oxidase. The amplifie fragment is used in the method of the invention.
CC The specification describes methods for the inhibition and control of
CC gibberellic acid levels. Gibberellic acid levels may be inhibited or
CC controlled by use of a chimeric expression construct expressing a RNA or
CC protein which suppresses the gibberellin biosynthetic pathway sequence,
CC diverts substrate from the pathway, or degrades pathway substrates or
CC products. The methods uses copalyl diphosphate synthase, 3beta-
CC hydroxylase, 2-oxidase, phytoene synthase, C-20 oxidase, and a
CC 2beta,3beta-hydroxylase polynucleotides to achieve this. The method is
CC used to control seed germination and seedling growth especially to
CC regulate gene products of gibberellin biosynthetic pathway and
CC restoration of normal seed germination, in transgenic plants. The plants
CC produced are gibberellin deficient, and have shortened hypocotyl and/or
CC epicotyl phenotypes compared to normal plants

PT New polynucleotides regulated by fatty lesion development and their
PT encoded polypeptides, useful for preventing, treating or ameliorating
PT atherosclerosis, as well as for immune or hyperproliferative disorders.
XX
PS Example 1; Page 79; 188pp; English.
XX
CC The present invention relates to an isolated nucleic acid regulated by
CC fatty lesion development, which comprises any of 55 polynucleotide
CC sequences from Oryctolagus cuniculus. The polynucleotide, polypeptide or
CC antibody is useful for preventing, treating, modulating or ameliorating a
CC medical condition, particularly atherosclerosis. The invention is used as
CC a marker or detector of nervous system disorder or disease (e.g.
CC Parkinson's disease, Alzheimer's disease, ischaemia, dementia). The
CC invention may also be useful for treating deficiencies or disorders of
CC the immune system (e.g. lymphopaenia, leukocyte adhesion deficiency
CC syndrome or haemoglobinuria, anaemia), hyperproliferative disorders
CC (e.g.Gaucher's disease), infectious disease (e.g. herpes simplex),
CC coagulation disorders, blood platelet disorders and autoimmune disorders
CC (Addison's disease, rheumatoid arthritis, dermatitis, Grave's disease).
CC The polynucleotide sequence is also used in gene therapy. The present
CC sequence is a 3' sequencing primer used in the identification and
CC characterisation of polynucleotides up-regulated by fatty lesion

```
PT   New neuroleptic-regulated polynucleotides expressed in the central
PT   nervous system for diagnosing and treating neuropsychiatric disorders
PT   such as schizophrenia, bipolar disorder and addiction-related behavior.
XX
PS   Example 1; Page 87; 210pp; English.
XX
CC   The present invention describes isolated neuroleptic-regulated nucleic
CC   acid molecules. (I) have neuroleptic, antimanic and antidepressant
CC   activities, and can be used in gene therapy. (I), polypeptides (II)
CC   encoded by (I), or a host cell (III) comprising (I), are useful for
CC   preventing, treating, modulating or ameliorating a medical condition such
CC   as a neuropsychiatric disorder. (I) are useful as diagnostic agents for
CC   diagnosing a pathological condition or susceptibility to a pathological
CC   condition such as neuropsychiatric disorder e.g. schizophrenia, a bipolar
CC   disorder or addiction-related behaviour. (I) are useful for detecting the
CC   presence of a nucleic acid encoding a protein in a mammalian tissue
CC   sample. (I) can be used as probes and primers, for chromosome
CC   identification, to control gene expression through triple helix formation
CC   or antisense DNA or RNA, in gene therapy to treat the above mentioned
CC   disorders, identifying individuals from minute biological samples, as an
CC   alternative to restriction fragment length polymorphism (RFLP) and as
CC   polymorphic markers for forensic purposes. (I) is also useful as
CC   molecular weight markers on Southern gels, diagnostic probes for the
CC   presence of specific mRNA in a particular cell type, as a probe to
CC   subtract-out known sequences in the process of discovering novel
CC   polynucleotides, for selecting and making oligomers for attachment to a
CC   gene chip or other support, to raise anti-DNA antibodies using DNA
CC   immunisation technique, and as an antigen to elicit an immune response.
CC   AAH21877 to AAH21984, AAB98083 and AAB98084 represent sequences used in
CC   the exemplification of the present invention

PT   New regulated genes of microglia and macrophages, useful for diagnosing,
PT   preventing or treating neuroinflammatory pathology and neurodegenerative
PT   disease.
XX
PS   Example 1; Page 88; 244pp; English.
XX
CC   The present sequence represents a primer used to isolate novel mouse
CC   microglia and macrophage regulatory gene DST (digital sequence tag)
CC   sequences. AAS06401-AAS06590 represent these novel sequences and the
CC   primer sequences used to isolate them. The PCR-based total gene
CC   expression analysis (TOGA) system is used to examine the expression
CC   pattern of molecules corresponding to genes that are regulated in
CC   unstimulated microglia, activated microglia, unstimulated macrophage and
CC   activated macrophage. The polynucleotides of the invention, the
CC   polypeptides encoded by them and antibodies that bind to these
CC   polypeptides are useful are useful for the diagnosis, prevention,
CC   treatment or amelioration of a medical condition, preferably a
CC   neuroinflammatory pathology or a neurodegenerative disease such as
CC   Alzheimer's disease, senile dementia, Parkinson's disease, obsessive
CC   compulsive disorders, epilepsy, schizophrenia, multiple sclerosis,
CC   depression and bipolar manic-depressive disorder. The sequences and
CC   methods of the invention can also be used for detecting or treating
CC   infectious disorders (e.g. AIDS), hyperproliferative disorders (e.g.
CC   cancer), immune disorders (e.g. severe combined immunodeficiency, SCID)
CC   autoimmune diseases (e.g. insulin dependent diabetes mellitus),
CC   inflammatory disorders (e.g. arthritis). The polynucleotides can be used
CC   for gene therapy

PT New polynucleotide useful in gene therapy for preventing, treating
PT modulating or ameliorating a medical condition such as psychoses or a
PT neuro psychiatric disorder e.g. schizophrenia, or a bipolar disorder in a
PT mammal.
XX
PS Example 1; Page 40; 254pp; English.
XX
CC This invention relates to the cDNA sequences of novel isolated
CC polynucleotides associated with psychoses or other neuropsychiatric
CC disorders. The sequences of the invention may act as blockers of D_2
CC receptors in the meso-limbic dopamine system. The nucleotide sequences of
CC the invention and the polypeptides encoded by them are useful in the
CC manufacture of a medicament useful for preventing, treating, modulating
CC or ameliorating a medical condition e.g. a neuropsychiatric disorder. An
CC antibody that binds the proteins of the invention is useful for
CC preventing, treating, modulating or ameliorating neurological disorders
CC such as psychoses or other neuropsychiatric disorders in a subject. The
CC sequences are also useful for diagnosing neurological disorders or a
CC susceptibility to a neurological disorder such as psychoses and other
CC neuro psychiatric disorders in a subject by determining the presence or
CC absence of mutation in the nucleotide sequence of apolipoprotein D or by
CC determining the alteration (increase or decrease) in the expression of
CC apolipoprotein D. The sequences of the invention are useful in treating
CC deficiencies or disorders of the central nervous system or peripheral
CC nervous system by activating or inhibiting the proliferation,
CC differentiation or mobilisation (chemotaxis) of neuroblasts, stem cells
CC or glial cells. The sequences are useful as a marker or detector of a
CC particular nervous system disease or disorder such as Alzheimer's
CC disease, Pick's disease, Binswanger's disease, other senile dementia,
CC Parkinson's disease, obsessive compulsive disorders, epilepsy,
CC encephalopathy, ischaemia, addiction, multiple sclerosis, depression and
CC manic-depressive disorder. The present sequence represents an
CC oligonucleotide primer used in the identification of the cDNA sequences
CC of the invention

PT New polynucleotides related to regulated genes characteristic of
PT atherosclerosis, useful for diagnosing, preventing, treating, modulating
PT or ameliorating atherosclerosis in a mammalian subject.
XX
PS Disclosure; Page 28; 130pp; English.
XX
CC The present invention describes an isolated polynucleotide (I) and its
CC complements, and degenerate variants, comprising a sequence selected from
CC those given in ABQ73206 to ABQ73222 (NS), which is a digital sequence tag
CC (DST) corresponding to mRNAs whose expression is regulated by
CC proliferative lesion development caused by mechanically induced intimal
CC hyperplasia, or by lercanidipine treatment, or by proliferative lesions
CC and reversed by lercanidipine treatment. (I) has antiatherosclerotic
CC activity and can be used in gene therapy. (I) can be used for diagnosing
CC a medical condition (e.g. atherosclerosis) in a subject which involves
CC determining the presence or absence of a mutation in (I) and diagnosing
CC the medical condition based on the presence or absence of the mutation.
CC (I) is also useful for diagnosing atherosclerosis, or the susceptibility
CC to atherosclerosis in a subject which involves detecting an alteration
CC (an increase or decrease) in amount of expression of (I). (I) is also
CC useful for diagnosing or monitoring the effects of treating a subject
CC with dihydropyridine calcium antagonist e.g., lercanidipine. (I) can also
CC be used for preventing, treating, modulating, or ameliorating a medical
CC condition such as atherosclerosis in a mammalian subject. The present
CC sequence represents a TOGA primer which is used in the exemplification of
CC the present invention

XX
PT   Preventing and treating hepatitis viral infection in a mammal, comprises
PT   administering nucleic acid molecules that up- or down-regulate in
PT   hepatitis B virus infection or polypeptides encoded by the nucleic acid
PT   molecules.
XX
PS   Disclosure; Page 28; 125pp; English.
XX
CC   The present invention relates to a method for preventing, treating,
CC   modulating or ameliorating a medical condition. The method involves
CC   administering one or more nucleic acid molecules up- or down-regulated in
CC   hepatitis B virus (HBV) infection or polypeptides encoded by the nucleic
CC   acid molecules or antibodies that bind to the polypeptide. The method is
CC   useful for preventing, treating, modulating or ameliorating a medical
CC   condition. It is also useful for determining the presence or absence of a
CC   mutation in the nucleic acid molecules or detecting an alteration in
CC   expression of the polypeptide which is useful for the diagnosis of
CC   hepatitis viral infection. The method is useful for assessing the stage
CC   of hepatitis viral infection (e.g., acute hepatitis versus chronic
CC   hepatitis) or assessing the efficacy or toxicity of therapeutic treatment
CC   for hepatitis viral infection and a gene expression profile is useful for
CC   identifying polypeptides and polynucleotides which are associated with
CC   hepatitis viral infection. Sequences of the invention are used in gene
CC   therapy and as vaccines. Nucleic acid sequences are useful as a
CC   diagnostic markers for HBV infection and for treating infectious
CC   diseases. The present DNA sequence is a PCR primer which is used for
CC   direct sequencing of TOGA (TOtal Gene expression Analysis) generated PCR
CC   products

PT   Control of gibberellin levels in plants useful to avoid unfavorable
PT   conditions in crops to increase yields, using transgenic plants having
PT   reduced seed germination and early seedling growth then treatment to
PT   restore these properties.
XX
PS   Example 19; Page 104; 155pp; English.
XX
CC   The invention relates to control of gibberellin (GA) levels in plants.
CC   The method involves producing transgenic plants having a phenotype of
CC   reduced seed germination and reduced early seedling growth, then
CC   restoring seed germination and early seedling growth by treating plants
CC   with an appropriate compound when conditions are favourable. The method
CC   is useful to control seed germination and/or early seedling growth in
CC   agricultural production so that unfavorable environmental conditions
CC   normally reducing agronomic output can be avoided and yields increased.
CC   Plants also demonstrate increased uniformity of germination, emergence
CC   and seedling vigor, so increasing yields at harvest. The method is
CC   especially useful in crop plants such as e.g. canola, soybean, cotton,
CC   etc., and is also useful in storage and transport of seeds to reduce
CC   premature germination which may affect agronomic or food quality of the
CC   seeds. The present sequence is a PCR primer used to isolate pumpkin 2beta
CC   -3beta hydroxylase cDNA. This primer is used in the exemplification of
CC   the invention

PS Example 1; Page 76; 184pp; English.
XX
CC The present invention describes a method for preventing or treating a
CC pathological condition (comprising ataxia telangiectasia (AT), AT tumours
CC or other cancers), which comprises administering to a mammalian subject
CC at least one of: (a) a first polynucleotide comprising a sequence having
CC 38-889 bp (consisting of the sequences in ACC79319 to ACC79392 (I)) or a
CC second polynucleotide at least 95% identical to the first polynucleotide;
CC (b) a third polynucleotide comprising at least 10-bp sequence that is
CC hybridisable to the first polynucleotide under stringent conditions; or
CC (c) a gene corresponding to any of (1)-(2) or another gene at least 95%
CC identical to the gene. (I) have cytostatic activities, and can be used in
CC vaccines and in gene therapy. The method is useful for preventing or
CC treating e.g., ataxia telangiectasia (AT), AT tumours or other cancers.
CC ACC79393 to ACC79423 represent primers used in the exemplification of the
CC present invention

PT New polypeptide associated with atherosclerosis, useful for treating
PT atherosclerosis, nervous system disorders, immune disorders,
PT hyperproliferative disorders and infectious diseases.
XX
PS Disclosure; Page 139; 146pp; English.
XX
CC The invention relates to polynucleotides and polypeptides associated with
CC atherosclerosis. Polynucleotides of the invention are useful for delivery
CC of genes, DNA vaccines, diagnostic reagents, peptides, proteins or
CC macromolecules. Sequences of the invention are useful for treating
CC nervous system disorders (e.g., Alzheimer's disease, Parkinson's disease,
CC multiple sclerosis, epilepsy), immune disorders (e.g., autoimmune
CC disorders such as rheumatoid arthritis, Addison's disease, haemolytic
CC anaemia, graft-versus-host disease, inflammation), hyperproliferative
CC disorders (e.g., neoplasms) and infectious diseases (e.g., viral,
CC bacterial, fungal or parasite infection). They are used for regeneration
CC of tissues, to repair, replace or protect damage tissues, for increasing
CC chemotaxis activity of cells, for increasing or decreasing the
CC differentiation or proliferation of embryonic stem cells from a lineage,
CC for modulating mammalian characteristics, (such as body weight or
CC height), for modulating mammalian metabolism affecting catabolism,
CC anabolism, processing utilisation and storage of energy, to change a
CC mammal's mental or physical state, or as a food additive or preservative.
CC The invention is useful in gene therapy. The present sequence is a
CC sequencing primer used in the invention

PT   Simplified TOGA method for simultaneous sequence-specific identification
PT   of multiple mRNA molecules in mRNA population, useful for determining
PT   tissue-specific patterns of gene expression or mechanisms of drug
PT   interaction.
XX
PS   Disclosure; Page 39; 93pp; English.
XX
CC   The present invention relates to a novel simplified TOGA (RTM) method for
CC   simultaneous sequence-specific identification of multiple mRNA molecules
CC   in a RNA population. The method involves characterising each of the
CC   sequence-specific polymerase chain reaction (PCR) products by partial
CC   sequence and length. The method is useful for determining tissue-specific
CC   patterns of gene expression or mechanisms of drug interaction. It is also
CC   useful for drug screening, studying physiological processes, genomic
CC   mapping or manufacture of diagnostic, prognostic or therapeutic reagents.
CC   The present sequence is a primer used to illustrate the method of the
CC   invention

PT   New tumor-associated oligopeptide, useful particularly for treating
PT   multiple myeloma, is recognized by CD8 cytotoxic T cells, also
PT   derivatives and related nucleic acid.
XX
PS   Disclosure; Page 22; 64pp; German.
XX
CC   This invention describes a novel tumor-associated oligopeptide that is
CC   recognized as an antigen by CD8+ cytotoxic T lymphocytes (CTL) and causes
CC   CTL-induced lysis and/or apoptosis of tumor cells, especially multiple
CC   myeloma cells. The oligopeptide is derived from human PRDI-BF1 (positive
CC   regulatory domain I-binding factor-1) which is able to induce an MHC
CC   (major histocompatibility complex) Class I allele variant A2-restricted
CC   immune response of CD8+ CTL against tumor cells. The products of the
CC   invention have cytostatic activity and can be used in a vaccine. The
CC   peptide of the invention, also related retro-inverse and pseudopeptides,
CC   fusion proteins (FP), polynucleotides, vectors, host cells and antibodies
CC   and T cell receptors specific for PRDI-BFI peptides are useful for
CC   treating diseases associated with PRDI-BF1, particularly tumors. The
CC   products of the invention are also useful as diagnostic, therapeutic and
CC   prophylactic agents for detecting, modifying, generating, expanding
CC   and/or regulating activation and functional status of T cells, and for
CC   preparation of poly- or mono-clonal or recombinant A2-restricted T cell
CC   receptors and their functional equivalents. This sequence represents an
CC   RT-PCR primer used to amplify the human PRDI-BF1 gene described in the
CC   invention.

PT Preparing a library of same-length signature sequences from a source
PT nucleic acid population by ligating to the cleaved ends, a second adapter
PT containing a recognition and cleavage site for a second restriction
PT endonuclease.
XX
PS Disclosure; Fig 2a; 54pp; English.
XX
CC This invention relates to a novel method for preparing a library of same-
CC length signature sequences from a source nucleic acid population.
CC Specifically, it comprises producing solid phase cloned libraries of
CC oligonucleotide tag-DNA signature sequence constructs, which are useful
CC for sequencing many polynucleotides simultaneously. The present invention
CC describes a kit for the construction of adapter-signature-adapter
CC constructs using 'first' and 'second' adapters each containing a specific
CC restriction endonuclease recognition site, and which flanks the same
CC length signature sequence. As such, using the method described herein it
CC is possible to do parallel sequencing of large populations of
CC polynucleotides for genomic mapping, genetic identification and medical
CC diagnostics. This oligonucleotide sequence is a DNA oligo involved in the
CC step wise process of preparing a library of same length signature
CC sequences from restriction fragments in an exemplification of the
CC invention.

XX
CC The invention comprises DNA sequences which are associated with
CC intestinal epithelium and peyer's patch M cells. The DNA sequences of the
CC invention are useful for assessing, modifying, modulating or regulating
CC intestinal epithelium or M cell development. The DNA sequences of the
CC invention are also useful in the treatment of: inflammatory bowel
CC disease, glutenenteropathy, infectious diseases, autoimmune diseases
CC (e.g. haemolytic anaemia, rheumatoid arthritis, dermatitis, Grave's
CC disease, multiple sclerosis, allergy, asthma and diabetic mellitus),
CC diseases or disorders of the immune system, hypersensitivity,
CC anaphylaxis, and blood group incompatibility. The present DNA sequence
CC represents a primer that was used in the exemplification of the
CC invention.

PT New isolated RNAs comprising an intron RNA that is released in a cell,
PT thus modulating the function of a target gene, useful for treating and
PT preventing diseases such as cancer and viral/microbial infections.
XX
PS Claim 2; SEQ ID NO 2; 54pp; English.
XX
CC The invention relates to isolated RNAs comprising an intron RNA that is
CC released in a cell, thus modulating the function of a target gene. Also
CC disclosed is a DNA template for the isolated RNA, an expression vector
CC comprising the DNA, and a composition comprising one or more agents that
CC induce RNA-mediated modulation of the functions of two or more target
CC genes in a cell, such as a mammalian cell. The isolated RNAs and
CC compositions are useful for modulating the function of a target gene in a
CC cell, e.g. to inhibit a cancer-related gene, potential viral gene, and
CC microbe-related gene, and thus useful for treating and preventing
CC diseases such as cancer and viral/microbial infections. The current
CC sequence represents a potential poly-pyrimidine tract of the artificial
CC RNA intron.

PT   New anti-proliferative substance comprising a radiolabeled DNA carrier,
PT   useful for preventing or treating uncontrolled cellular proliferation
PT   e.g. restenosis, cancer or malignant tumors.
XX
PS   Claim 13; SEQ ID NO 8; 28pp; English.
XX
CC   The invention relates to an anti-proliferative substance for preventing
CC   uncontrolled cellular proliferation comprising a radiolabelled DNA
CC   carrier, where a radioisotope is located internally within the DNA
CC   sequence, at 5' end or at 3' end, and the radiolabelled DNA carrier
CC   penetrates the cell membrane and is retained intracellularly for a time
CC   sufficient for the radio-isotope to effect a dose therapy. The carrier in
CC   the anti-proliferative substance is an oligonucleotide, which is linear
CC   or a plasmid, which is circular. The plasmid is of viral or bacterial
CC   origin. The oligonucleotide is a double- or a single-stranded DNA
CC   sequence, which is conjugated with an antibody for cell-specific
CC   delivery. The oligonucleotide is also conjugated to a stent surface,
CC   cholesterol, oleic acid, linoleic acid, TGFalpha, antibody, TGFbeta,
CC   cytokines or growth factors. The anti-proliferative substance is useful
CC   for preventing or treating uncontrolled cellular proliferation. The
CC   uncontrolled cell proliferation is a restenosis following angioplasty, or
CC   cancer or a malignant tumour. The present sequence represents an
CC   oligonucleotide carrier used in the invention.

PT   Determining the nucleotide sequence of a nucleic acid analyte - using
PT   electro-spray ionisation.
XX
PS   Example 1; Fig 3A; 25pp; English.
XX
CC   The invention relates to an analytical method for determining the
CC   nucleotide sequence of nucleic acid analytes, including chemically
CC   modified oligonucleotides. This new method utilises electrospray
CC   ionisation-Fourier transform mass spectrometry. The ions are excited by
CC   sustained off-resonance excitation with single shot excitation, and the
CC   target fragmented by collisionally activated dissociation by a neutral
CC   gas, e.g. carbon dioxide. Alternatively, the excitation and dissociation
CC   can be nozzle skimmer dissociation. The method is used in molecular
CC   biology and biomedical applications. The method, utilising electrospray
CC   ionisation-Fourier transform ion cyclotron resonance mass spectrometry,
CC   is extremely rapid and acts directly on the oligonucleotide. The method
CC   is effective for a variety of nucleic acid analytes, particularly
CC   chemically modified oligonucleotides which have not previously been
CC   successfully sequenced. The present sequence represents a
CC   phosphorothioate oligodeoxynucleotide

PT   Polymorphic bovine DNA markers - used in genetic identification, gene
PT   mapping, and selective breeding.
XX
PS   Table 7; Page 375; 517pp; English.
XX
CC   The sequence is that of a bovine microsatellite sequence obtd. by
CC   screening a library of bovine MboI DNA fragments of between 250 and 500
CC   bp with an (AC)15 and a (TC)15 oligonucleotide probe. One out of 50
CC   clones cross-hybridised. Assuming independent distribution of
CC   microsatellites and MboI sites, the frequency of (T6)n >9 microsatellites
CC   in the bovine genome is estimated at >100, 000. The sequence information
CC   for ca. 230 such bovine microsatellites is summarised in the
CC   specification and indexed herein (see below). The sequences upstream and
CC   downstream of the microsatellite sequence were used to generate the
CC   required PCR primers for in vitro amplification of the corresp.
CC   microsatellite (using the program OPTIPRIM). The microsatellites may be
CC   used to identify individuals, for parentage testing, and in the genetic
CC   mapping of economic trait loci, or genes involved the determinism of
CC   economically important traits esp. in cattle, to allow selective
CC   breeding. See also AAQ33501-34437. (Updated on 25-MAR-2003 to correct PN
CC   field.)

XX
PS   Example; Page 12; 34pp; English.
XX
CC   AAR62941 and AAR62942 are examples of synthetic immunoreactive peptides.
CC   They are used in a method for detecting an antigen in a subject. The
CC   method involves binding the antigen to a solid support and then reacting
CC   it with an immunoreactive ligand (L) bound to an oligo; removing any
CC   unreacted L, and then detecting the presence of the oligo. A similar
CC   method can be used to detect Abs, in which case the ligand is an oligo-
CC   labelled Ag. The use of an amplifiable oligo as the label allows Ag or Ab
CC   to be detected at very low levels. An exemplary olgi is AAQ75024 which
CC   can be covalently attached by the 5'- terminus to the N- or C-terminal of
CC   a synthetic peptide. In the example, peptide AAR62941 was coupled to
CC   oligo AAQ75024 using disuccinimidyl suberate. Serum samples suspected to
CC   contain HEV Abs were immobilised on plastic tubes or wells, then
CC   incubated for 30-60 mins with the peptide-oligo proruct. The vessels were
CC   washed; bound oligo was released with 0.2M glycine and amplified in a
CC   separate tube using as primers AAQ75025 and AAQ75026 in 30 cycles of PCR.
CC   The amplification product - AAQ75031 - was treated with uracil DNA
CC   glycoslase to remove the U18 fragment, and the product captured by
CC   immoblised oligo-dT. (Updated on 25-MAR-2003 to correct PN field.)

PT   corresponding DNA, used in the manipulation of pigmentation in plants.
XX
PS   Example 15; Page 59; 234pp; English.
XX
CC   Anchored poly(T) oligonucleotides polyT-anchA (AAT94667), polyT-anchC
CC   (AAT94668) and polyT-anchG (AAT94669) are complementary to the upstream
CC   region of a polyadenylation sequence. They were used to prime cDNA
CC   synthesis from snapdragon (Antirrhinum majus) petal and leaf RNA, and
CC   were also utilised in the PCR amplification of plant cytochrome P450
CC   sequences (see also AAT94670-73). A cDNA clone (see AAT94657) encoding
CC   flavonoid 3' hydroxylase (see AAW35704) was isolated using a differential
CC   display approach. This can be used to manipulate the pigmentation of
CC   transgenic plants

CC The present invention describes novel proteins isolated from cDNA clones:
CC AE648_1i; AE693_1i; AK438_1i; AK609_1i; AM1060_1i; AQ2_1i; K433_1i; or
CC L256_1i, deposited as ATCC 98237. The present sequence represents the 3'-
CC portion of AQ2_1i isolated from a human ovary cDNA library. The proteins
CC from the present invention may be administered in a composition to
CC prevent, treat or ameliorate a medical condition. The proteins may
CC exhibit biological activities such as nutritional activity, cytokine and
CC cell proliferation/differentiation activity, immune stimulating or
CC suppressing activity, haematopoiesis regulating activity, tissue growth
CC activity, activin/inhibin activity, chemotactic/chemokinetic activity,
CC haemostatic and thrombotic activity, receptor/ligand activity, anti-
CC inflammatory activity, cadherin/tumour invasion suppressor activity,
CC tumour inhibition activity and other activities. (Updated on 25-MAR-2003
CC to correct PR field.)

PT Treating bacterial infections in humans or animals with
PT oligo:nucleotide(s) - resistant to nuclease and targetted to bacterial
PT nucleic acid or proteins, also conjugates of these oligo:nucleotide(s)
PT with antibiotics.
XX
PS Claim 49; Page 87; 163pp; English.
XX
CC This antisense oligonucleotide is nuclease resistant and can be used in
CC the treatment of animals, including humans, having a bacterial infection.
CC The treatment comprises administration of such nuclease resistant
CC oligonucleotides, targeted to a nucleic acid or protein of the bacterium,
CC and formulated with a carrier. A compound comprising this nuclease
CC resistant oligonucleotide can be covalently linked to an antibiotic. The
CC method is used to treat infections by a wide variety of Gram-positive and
CC Gram-negative, or acid-fast, bacteria, in human and veterinary medicine.
CC The methods are particularly used in immuno-compromised individuals (e.g.
CC patients with acquired immunodeficiency syndrome or those receiving
CC chemotherapy or radiation therapy), optionally in combination with, or
CC fused to, antiviral or other antimicrobial oligonucleotides. Apart from
CC therapeutic use, the oligonucleotides can be used to control bacteria in
CC laboratory cultures, foods, beverages and industrial processes. The
CC oligonucleotides are specific for bacteria, without affecting metabolism
CC in mammalian cells. They may also activate RNase H and have a general,
CC non-specific immune-stimulating effect. The oligonucleotides can be
CC administered orally, intranasally, rectally, topically or by injection,
CC optionally coupled to an agent (e.g. carbohydrate or polyamine) that
CC enhances cellular uptake

XX
CC   A method has been developed for labelling an oligonucleotide having a
CC   repeated sequence of (XY)n (where X and Y consists of a combination of
CC   adenine and thymine or uracil or guanine and cytosine, and n is an
CC   integer of 1 or more ) at the 3'-terminal side in which the repeated
CC   sequence is added and extended using a labelled body of the nucleotide
CC   constituting the repeated sequence and a DNA polymerase lacked in 5' to
CC   3' exonuclease activity. The method can be used for detecting a gene. The
CC   method can detect a gene in a sensitivity up to ten times higher than
CC   prior art methods. The present sequence represents a primer used in an
CC   example from the present invention

PT   Therapeutic composition containing antisense oligonucleotides that
PT   include arabinose sugars, particularly for inhibiting viral replication.
XX
PS   Example 1; Page 29; 91pp; English.
XX
CC   The invention relates to a new composition for selective, sequence-
CC   specific inhibition of gene transcription and expression in a host. The
CC   composition comprises oligonucleotides containing arabinose sugars that
CC   can hybridise to either a a single-stranded (ss) RNA to induce RNase H
CC   cleavage activity, or to a DNA/DNA or DNA/RNA duplex to form a triple
CC   helix, thereby inhibiting DNA replication and/or transcription. The
CC   oligoarabinonucleotides are used for antisense inhibition of gene
CC   expression or to prevent DNA replication, or reverse transcription of RNA
CC   by retroviruses. The compositions are therefore particularly used to
CC   inhibit retroviral replication. The oligoarabinonucleotides can also be
CC   used, in combination with RNase H, as reagents for sequence-specific
CC   cleavage or RNA mapping, and additionally for the study and control of
CC   gene expression in cells. The oligoarabinonucleotides have excellent
CC   affinity for RNA, increased resistance to nucleases and show little if
CC   any non-specific binding to cellular or serum proteins. They target ss
CC   RNA, but not complementary ss DNA, so may be useful for targetting
CC   retroviral genomic RNA to inhibit the early stages of viral replication.
CC   Oligoarabinonucleotides containing pyrimidine bases form triple helices
CC   with significantly higher thermal stability than those produced by normal
CC   oligonucleotides. Sequences AAZ87160-Z87164 represent
CC   oligoarabinonucleotides containing beta-D-arabinose used in an
CC   exemplification of the present invention

PT   Therapeutic composition containing antisense oligonucleotides that
PT   include arabinose sugars, particularly for inhibiting viral replication.
XX
PS   Example 2; Page 31; 91pp; English.
XX
CC   The invention relates to a new composition for selective, sequence-
CC   specific inhibition of gene transcription and expression in a host. The
CC   composition comprises oligonucleotides containing arabinose sugars that
CC   can hybridise to either a a single-stranded (ss) RNA to induce RNase H
CC   cleavage activity, or to a DNA/DNA or DNA/RNA duplex to form a triple
CC   helix, thereby inhibiting DNA replication and/or transcription. The
CC   oligoarabinonucleotides are used for antisense inhibition of gene
CC   expression or to prevent DNA replication, or reverse transcription of RNA
CC   by retroviruses. The compositions are therefore particularly used to
CC   inhibit retroviral replication. The oligoarabinonucleotides can also be
CC   used, in combination with RNase H, as reagents for sequence-specific
CC   cleavage or RNA mapping, and additionally for the study and control of
CC   gene expression in cells. The oligoarabinonucleotides have excellent
CC   affinity for RNA, increased resistance to nucleases and show little if
CC   any non-specific binding to cellular or serum proteins. They target ss
CC   RNA, but not complementary ss DNA, so may be useful for targetting
CC   retroviral genomic RNA to inhibit the early stages of viral replication.
CC   Oligoarabinonucleotides containing pyrimidine bases form triple helices
CC   with significantly higher thermal stability than those produced by normal
CC   oligonucleotides. Sequences AAZ87165-Z87169 represent
CC   oligodeoxyarabinonucleotides containing 2'-deoxy-2'fluoro-beta-D-
CC   arabinose used in an exemplification of the present invention

PT   Novel secreted factor encoded by clone P00188D12 which is differentially
PT   expressed in certain disease states, useful in diagnosing and treating
PT   cardiac, renal or inflammatory diseases.
XX
PS   Example 1; Page 42; 71pp; English.
XX
CC   The patent discloses novel secreted factor protein encoded by clone
CC   P00188_D12. The secreted factor is differentially expressed in certain
CC   disease states. Secreted protein, its antibodies, antagonists or
CC   compositions comprising them are useful in the diagnosis and treatment of
CC   cardiac diseases such as congestive heart failure, myocarditis,
CC   hypertrophic cardiomyopathy, angina pectoris, myocardial infarction,
CC   cardiac arrhythmia, arteriosclerosis, kidney diseases such as acute renal
CC   failure, renal glucosuria, renal infarction, nephrogenic diabetes
CC   insipidus, polycystic kidney disease, hereditary nephritis and
CC   inflammatory diseases such as asthma, autoimmune diabetes, tumour
CC   angiogenesis, rheumatoid arthritis, osteoarthritis, toxic shock syndrome,
CC   asthma, stroke, neural trauma, psoriasis, cerebral malaria, osteoporosis,
CC   Crohn's disease, ulcerative colitis, Alzheimer's disease. Secreted
CC   protein DNA is useful in antisense-mediated gene inhibition and in gene
CC   therapy. An array comprising one or more oligonucleotides complementary
CC   to reference RNA or DNA encoding the secreted factor is useful for
CC   detecting cardiac, kidney and inflammatory disease. The present DNA
CC   sequence is an oligonucleotide which is used in the preparation of a
CC   normalised cDNA library containing secreted factor DNAs. The normalised
CC   cDNA libraries are used in the identification of differentially expressed
CC   rat secreted factor P00188_D12 gene

PT   Fibronectin scaffold protein array for obtaining a protein/compound which
PT   binds to a compound/protein, comprises a fibronectin type III domain
PT   having a randomized loop, a randomized beta-sheet or their combination.
XX
PS   Disclosure; Page 25; 67pp; English.
XX
CC   The present invention relates to an array of proteins (antibody mimics)
CC   comprising a fibronectin type III domain having a randomised loop, a
CC   randomised beta-sheet, or their combination, and has the capacity to bind
CC   to a compound that is not bound by a corresponding naturally- occurring
CC   fibronectin, immobilised onto a solid support. The antibody mimics is
CC   useful for detecting a compound preferably a protein, in a biological
CC   sample. It is also useful to detect one or more different analytes
CC   simultaneously in a sample. Hence is useful for diagnostic purposes. It
CC   is also useful for the purpose of designing proteins capable of binding
CC   to virtually any compound of interest. The present sequence is an
CC   oligonucleotide A18-2PEG linker used in an exemplification of the
CC   invention

CC The present invention relates to a method for stimulating an immune
CC response. The method comprises administering an immunostimulatory nucleic
CC acid to a non-rodent subject in sufficient quantity to stimulate an
CC immune response. The present sequence is one such immunostimulatory
CC nucleic acid. The immunostimulatory nucleic acids can be pyrimidine rich
CC (py-rich) or thymidine (T) rich. The method is used to vaccinate subjects
CC against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae
CC and/or orthomyxoviridae), bacterial antigens (e.g. toxoplasma,
CC haemophilus, campylobacter, clostridium, Escherichia coli and/or
CC staphylococcus), fungal antigens and/or parasitic antigens. The method is
CC also useful for preventing cancer, asthma, infectious disease, allergy or
CC immune deficiency. The present sequence can also be used to redirect a
CC Th2 to a Th1 immune response and to activate immune cells. Note: the
CC present sequence may have a phosphorothioate backbone

XX
CC The present sequence corresponds to polylinker DNA of the phagemid vector
CC pCR2.1. It was used in the construction of a normalised rat cDNA library,
CC which was used in an example demonstrating differential expression of a
CC rat gene referred to as clone P00210D09. The invention relates to a
CC polypeptide comprising a sequence of at least 80% identity to residues 22
CC -122 of the present sequence, or a sequence encoded by a nucleic acid
CC hybridising under stringent conditions to the complement of the coding
CC region comprising 1031 nucleotides, and having at least one biological
CC activity of the polypeptide encoded by clone P00210D09. The polypeptides
CC and polynucleotides of the invention are useful for the treatment of
CC cardiac, renal and inflammatory diseases. The polynucleotides are useful
CC in antisense mediated gene inhibition and in gene therapy. The
CC polypeptides are useful in assays for identifying lead compounds that may
CC be used as therapeutic agents in the treatment of cardiac, kidney or
CC inflammatory diseases

PS Example 5; Page 37; 87pp; English.
XX
CC The present invention relates to novel polypeptides having cytotoxic
CC activity obtainable from sea hare Aplysia. Sequences of the invention are
CC useful for the manufacture of cytotoxic agents against apoptosis-
CC resistant cells, where the agents are useful for diagnosis, prevention,
CC treatment of disorders associated with dysfunctions of GAP-SH3 binding
CC protein, factors for generating or detoxifying reactive oxygen species
CC (ROS) and factors for blocking and/or by-passing of caspases. They are
CC useful for tumour therapy. Cytotoxic proteins of the invention are useful
CC for destroying tumours and/or selectively killing cells in tissues, for
CC identifying novel targets for the development of pharmaceutical agents,
CC preferably anti-tumour agents and as specific ion channel modulators,
CC e.g., blockers or openers for therapy, diagnostic or research. They are
CC useful for the diagnosis and therapy of hyperproliferative diseases,
CC preferably tumours, e.g., leukaemia, carcinoma, sarcoma and melanoma.
CC They are also useful for development of drugs for the treatment of
CC degenerative diseases such as Alzheimer's disease, Parkinson's disease,
CC arteriosclerosis, heart diseases, stroke and vascular diseases. The
CC present sequence is an oligonucleotide which is used for amplifying sea
CC hare cyplasin L DNA. This sequence is used in the exemplification of the
CC invention

PT   Increasing efficiency of second strand cDNA synthesis using terminal
PT   continuation model before performing further RNA amplification by RNA
PT   transcription.
XX
PS   Example 7; Page 80; 128pp; English.
XX
CC   This invention relates to a novel method for increasing the efficiency of
CC   second strand cDNA synthesis through a mechanism of terminal
CC   continuation. In the method an RNA molecule is obtained and a first
CC   primer is added that comprises a region that hybridises to a
CC   complementary region of the molecule before a second primer is added
CC   comprising at least one riboguanine at the 3' end of the primer. A first
CC   complementary nucleic acid molecule is synthesised, the RNA molecule and
CC   second primer are removed and a second complementary nucleic acid
CC   molecule is synthesised to form a second hybrid with an extension product
CC   of the third primer bound to the first complementary molecule. The method
CC   of the invention is useful for increasing the efficiency of second strand
CC   cDNA synthesis and may be used for linear amplification of genetic
CC   signals from histologically stained tissue. The present sequence
CC   represents a poly d(T) PCR primer used in the method of the invention

PT   Comparative detection of the amounts of RNA and DNA.
XX
PS   Disclosure; Page 9; 9pp; Japanese.
XX
CC   The present invention describes a method for the comparative detection of
CC   the amount of an RNA. The method comprises: (a) cDNAs obtained by
CC   transcribing respectively from at least two tissue RNAs are respectively
CC   fragmented by using a same restriction enzyme; (b) each different adaptor
CC   and a common adaptor are added to each of the cDNA fragments derived from
CC   the same or different tissues by the step (a); (c) the resultant adaptor-
CC   added cDNAs are mixed together; (d) an adaptor primer having the common
CC   sequence to said different adaptor and a gene-specific adaptor are used
CC   to amplify said adaptor-added cDNAs containing no region derived from
CC   polyadenylic acid of the mRNA before the addition of the adaptor among
CC   the adaptor-added cDNAs prepared by the step (b); (e) the ratios of the
CC   cDNA amounts are measured between the tissues; (f) the RNA is detected
CC   from the measured result; (g) each different adaptor and a common adaptor
CC   are added to each of the genomic DNA fragments derived from a same or
CC   different individuals; (h) the resultant adaptor-added genomic DNAs are
CC   mixed together; (i) the adaptor-added genomic DNAs are amplified by using
CC   an adaptor primer having the common sequence to the different adaptor and
CC   a sequence-specific adaptor; and (j) the ratios of the amplified amounts
CC   of the genomic DNAs are measured between the individuals. The method is
CC   used for the detection of the amounts of RNA and DNA. The present
CC   sequence represents an oligonucleotide which is used in the
CC   exemplification of the present invention

PT New oligonucleotide, useful for preventing or treating a disease related
PT to a target RNA in a system, e.g., AIDS or hepatitis B.
XX
PS Example 2; Page 35; 73pp; English.
XX
CC The present invention relates to a new oligonucleoside which comprises
CC alternating first and second segments. The first segment comprises at
CC least one sugar modified nucleoside. The second segment comprises at
CC least one 2'-deoxynucleoside. The oligonucleoside comprises at least 2 of
CC each of the first and second segments, so that it comprises at least 4
CC alternating segments. The oligonucleotide is useful for preparing a
CC composition for inducing RNase H-mediated cleavage of a target RNA in a
CC system, preventing or decreasing translation, transcription or
CC replication of a target RNA in a system, detecting the presence of a
CC target RNA in a system, validating a gene target corresponding to a
CC target RNA in a system or preventing or treating a disease related to a
CC target RNA in a system, e.g., acquired immune deficiency syndrome (AIDS)
CC or hepatitis B. The invention is useful in gene therapy. The present
CC sequence is an antisense oligonucleotide used in the exemplification of
CC the invention

PT Concurrent interrogation of a number of polymorphic sites, useful for
PT genetic testing, carrier screening, genetic profiling, and identity
PT testing, comprises conducting a multiplexed elongation assay using
PT probes.
XX
PS Example 9; Page 46; 143pp; English.
XX
CC This invention relates to a novel method for the concurrent interrogation
CC of a number of polymorphic sites in the presence of, and without
CC interference from, non-designated polymorphic sites. Specifically, it
CC comprises conducting a multiplexed elongation assay by applying one or
CC more temperature cycles to achieve linear amplification of the target or
CC a combination of annealing and elongation steps under temperature-
CC controlled conditions. Furthermore, this detection method uses probe
CC extension or elongation and relies on enzymatic recognition, a superior
CC technique that no longer depends on differential hybridisation. The
CC present invention describes probes and methods useful for identifying or
CC detecting polymorphisms at one or more designated sites, such that they
CC can identify mutations within the cystic fibrosis conductance
CC transmembrane regulator (CFTR) or the human leukocyte antigen (HLA)
CC genes. In addition, concurrent interrogation of a multiplicity of
CC polymorphic sites is useful for genetic testing, carrier screening,
CC genotyping or genetic profiling, and identity testing. This
CC oligonucleotide is the negative control probe used for the elongation
CC mediated multiplexed analysis of HLA-DR, in an exemplification of the
CC invention.

XX
CC The invention relates to amplifying for RNA in a sample comprises
CC eliminating single-stranded oligonucleotide from the transcription
CC sample. The method involves synthesizing single-stranded cDNA by
CC incubating the sample RNA with reverse transcriptase and an
CC oligonucleotide primer that primes synthesis in a direction toward 5' end
CC of the RNA; converting the single-stranded cDNA into double-stranded cDNA
CC to form a transcription sample containing a cDNA template; eliminating
CC single-stranded oligonucleotide from the transcription sample; and
CC transcribing the cDNA template into RNA using an RNA polymerase. The
CC method is useful for improving RNA polymerase based RNA transcription
CC from a polynucleotide template. The method inhibits the undesired non-
CC template derived production of RNA in the transcription reaction.
CC Sequences ADI34483-ADI34489 represent oligonucleotides used in a T7 RNA
CC transcription reaction.

PT Determining a functional property of fluid in chamber by introducing a
PT support comprising test elements having reaction and detection domains,
PT introducing a test fluid, and detecting locations not reactive with the
PT fluid.
XX
PS Example 2; SEQ ID NO 2; 22pp; English.
XX
CC The invention relates to a method of determining a functional property of
CC a fluid in a chamber comprising introducing into the chamber a support to

```
CC   which is bound several test elements, each of the test elements
CC   comprising a reaction domain and a detection domain, introducing into the
CC   chamber a fluid that is interactive with the reaction domains, removing
CC   the fluid from the chamber, determining by means of the detection domains
CC   the locations at which the fluid has not interacted with the reaction
CC   domains, and relating the locations to the functional property of the
CC   fluid. The reaction domains involves nucleotides. The detection domain
CC   comprises a member of a specific binding pair. The determining of the
CC   step involves treating the test elements to modify only those reaction
CC   domains that have interacted with the fluid. The functional property is
CC   chosen from the flow pattern of the fluid, reagent distribution within
CC   the fluid and time dependent reactivity of the fluid. The method is
CC   useful for determining a functional property of a fluid in a chamber and
CC   for synthesising arrays of biopolymers e.g., arrays of polynucleotides.
CC   The method provides for the characterisation of a new fluid in a known
CC   flow cell, a known fluid in a new flow cell or a new fluid/flow cell
CC   combination. This sequence represents a test element used in the method
CC   of the invention.

PT   Synthesizing single stranded cDNA, involves annealing cDNA synthesis
PT   primer to RNA and synthesizing first cDNA strand, ligating adaptor to
PT   single stranded cDNA using DNA ligase, and amplifying ligated single
PT   stranded cDNA fragment.
XX
PS   Example 1; SEQ ID NO 6; 22pp; English.
XX
CC   The invention describes a method of synthesising single stranded cDNA by
CC   a 5'-ligated adaptor-mediated process involving: annealing a cDNA
CC   synthesis primer to RNA, separating the cDNA strand from the RNA,
CC   purifying the cDNA, contacting the cDNA with an adaptor, ligating the
CC   adaptor through 5'-phosphate on strand (II) of the adaptor to single
CC   stranded using DNA ligase, and amplifying the obtained ligated single
CC   stranded fragment in an molecular amplification procedure. The method is
CC   useful for: synthesising a single stranded cDNA by a 5'-ligated adaptor-
CC   mediated process, where the source of nucleic acid is chosen from blood,
CC   serum, plasma, cerebrospinal fluid, urine, tissue samples, biopsies and
CC   saliva. The tissue sample comprises a cell population which may be single
CC   cell, 100-1000000 cells or more as desired; making a cDNA library from a
CC   collection of mRNA molecules in a sample, where the method is applied to
CC   amplify the cDNAs corresponding to the mRNAs by annealing one or more
CC   cDNA synthesis primers to several mRNAs in the sample; producing a
CC   subtractive hybridisation probe which involves synthesising a double-
CC   stranded cDNA collection from a first mRNA population by the method,
CC   where primer 1 is modified by biotin in the 5' end, isolating the biotin-
CC   containing single stranded cDNA (sense) by use of streptavidin coated
CC   magnetic beads, synthesising a double-stranded cDNA collection from a
CC   second mRNA population according to the method, isolating the non-biotin-
CC   containing single stranded cDNA (anti-sense) by use of streptavidin
CC   coated magnetic beads, hybridising the sense to the anti-sense cDNA,
CC   where an unhybridised sub-population of the anti-sense cDNA is found,
CC   isolating the unhybridised sub-population of the antisense cDNA by use of
CC   streptavidin coated cDNA, and generating a second double-stranded cDNA
CC   collection from the unhybridised sub-population by PCR using primer 1 and
CC   primer 2; and detecting expression of a gene in a pre-selected cell
CC   population. The method is an improved method for producing amplified
CC   heterogeneous populations of cDNA from limited quantities of RNA or other
CC   nucleic acid. This sequence represents a poly-A-tail used to in the
CC   production single stranded cDNA.

PT Constructing synthetic polynucleotide for modulating the quality of a
PT selected phenotype displayed by an organism comprises replacing a first
PT codon with a synonymous codon to construct the synthetic polynucleotide.
XX
PS Example 1; SEQ ID NO 77; 86pp; English.
XX
CC The present invention describes a method for constructing a synthetic
CC polynucleotide from which a polypeptide is producible to confer a
CC selected phenotype to an organism of interest or part in a different
CC quality than that conferred by a parent polynucleotide that encodes the
CC same polypeptide. The method comprises: (a) selecting a first codon of
CC the parent polynucleotide for replacement with a synonymous codon, where
CC the synonymous codon is selected on the basis that it exhibits a
CC different phenotypic preference than the first codon in a comparison of
CC phenotypic preferences in test organisms or parts, where the test
CC organism are selected from organisms of the same species as the organism
CC of interest and organisms that are related to the organisms of interest;
CC and (b) replacing the first codon with the synonymous codon to construct
CC the synthetic polynucleotide. Also described: (1) a method for
CC determining the phenotypic preference of a first codon in an organism of
CC interest or its parts; (2) a synthetic polynucleotide constructed from
CC the method above; (3) an organism or interest or part containing a
CC synthetic polynucleotide constructed from the method above; (4) an
CC organism or interest or part containing a synthetic construct that
CC comprises a regulatory polynucleotide operably linked to a tandem repeat
CC of a first codon fused in frame with a reporter polynucleotide that
CC encodes a reporter protein, which produces, or is predicted to produce a
CC selected phenotype or a phenotype of the same class as the selected
CC phenotype in the organism or part; (5) a method of modulating the quality
CC of a selected phenotype that is displayed by an organism of interest or
CC part and that results from the expression of a parent polynucleotide that
CC encodes the polypeptide; (6) a method of enhancing the quality of a
CC selected phenotype that is displayed by an organism of interest or part
CC and that results from the expression of a parent polynucleotide that
CC encodes the polypeptide; and (7) a method of reducing the quality of a
CC selected phenotype that is displayed by an organism of interest or part
CC and that results from the expression of a parent polynucleotide that
CC encodes the polypeptide. The method is useful for constructing a
CC synthetic polynucleotide from which a polypeptide is producible to confer
CC a selected phenotype to an organism of interest or part in a different
CC quality than that conferred by a parent polynucleotide that encodes the
CC same polypeptide. It is useful for modulating the quality of a selected
CC phenotype displayed by an organism or part. The present sequence encodes
CC a synthetic leader sequence, which is used in an example from the present
CC invention.

XX
PT Signal amplification method for detecting expressed gene, by using
PT reverse transcription reaction and self-assembly reaction of
PT oligonucleotide probes.
XX
PS Disclosure; SEQ ID NO 4; 27pp; Japanese.
XX
CC The invention relates to a signal amplification method (M1) for detecting
CC expressed gene using reverse transcription reaction and a self-assembly
CC reaction of forming a self assembly of oligonucleotide probes, thus
CC improving detection sensitivity of the expressed gene in a DNA chip. (M1)
CC is useful for signal amplification method (M1) for detecting expressed
CC gene (claimed). (M1) improves detection sensitivity of the expressed gene
CC in a DNA chip (claimed). (M1) does not require use of expensive enzymes
CC and enables detection corresponding to the original RNA length or
CC expression amount because of using neither linear amplification nor PCR.
CC This sequence corresponds to a nucleotide used in the method of the
CC invention.

PT   New short interfering nucleic acid, useful e.g. for treatment and
PT   diagnosis of obesity or diabetes, downregulates expression of the
PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 134; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

PT Determining the concentration of a target nucleic acid, useful e.g. for
PT detecting genetic mutations, comprises using a fluorescently labeled
PT probe in which emission is reduced by binding to the target nucleic acid.
XX
PS Example 6; Page 23; 55pp; English.
XX
CC The invention relates to the determination of the concentration of a
CC nucleic acid target, using a fluorescently labeled probe which produces
CC reduced fluorescence emission when hybridised to the target nucleic acid.
CC The method comprises measuring the reduction in emission caused by
CC hybridisation. The new method is particularly used to quantify target
CC nucleic acids by a real-time polymerase chain reaction, e.g. for
CC quantifying microbial cells in co-cultures or symbiotic systems, for
CC detecting gene mutations or polymorphisms, and for analysing melting
CC curves of target nucleic acids to determine a Tm value. Methods of the
CC invention allow target nucleic acids to be quantified quickly, easily and
CC accurately. Particularly there is no need to remove unbound probe, and no
CC materials are introduced that inhibit amplification by Taq polymerase (so
CC conventional PCR conditions can be used). The specificity of PCR is kept
CC high (amplification of primer dimers is delayed), and the limit of
CC quantitation is reduced. Complex probes are not needed, and amplification
CC can be monitored in real time. The working graph for data analysis
CC (automatically generated by a computer) has a higher correlation
CC coefficient than conventional graphs so more accurate quantitation is
CC possible. The current sequence represents a synthetic
CC deoxyribooligonucleotide that was used for investigating the effects of
CC the number of G(s) in each target nucleic acid, and the number of G(S) in
CC its corresponding invention nucleic acid probe

PT   Kit for diagnozing and treating T-cell associated diseases e.g.
PT   autoimmune, degenerative nervous system and infectious disease, comprises
PT   nucleic acid primers specifically priming and allowing amplification of a
PT   Vbeta gene.
XX
PS   Disclosure; SEQ ID NO 849; 164pp; English.
XX
CC   The invention relates to a kit for diagnosing and treating T-cell
CC   associated diseases which comprises a panel of nucleic acid primers
CC   specifically priming and allowing amplification of each Vbeta gene,
CC   VbetaRNA or cDNA. The kit is useful for diagnosing organ transplant
CC   rejection and diagnosing and treating T-cell associated diseases
CC   including autoimmune diseases, degenerative nervous system diseases,
CC   graft versus host disease, hypersensitivity diseases, infectious diseases
CC   and neoplastic diseases. Autoimmune diseases include Addison's disease,
CC   atrophic gastritis. Degenerative nervous system diseases include multiple
CC   sclerosis and Alzheimer's disease. Hypersensitivity diseases include Type
CC   I hypersensitivities such as contact with allergens that lead to
CC   allergies, Type II hypersensitivities such as those present in
CC   Goodpasture's syndrome and Type IV hypersensitivities such as those
CC   manifested in leprosy. Infectious diseases include viral infections
CC   caused by viruses such as HIV, fungal infections such as those caused by
CC   the yeast genus Candida, parasitic infections such as those caused by
CC   schistosomes, filaria and bacterial infections such as those caused by
CC   Mycobacterium. Neoplastic diseases include lymphoproliferative diseases
CC   such as leukaemias, lymphomas and cancers such as cancer of the brain,
CC   breast. The present sequence represents a Vbeta gene repeat sequence.

PT   New stem cell factor polypeptide(s) - for stimulating the growth of
PT   primitive progenitor cells, esp. for treating disorders involving blood
PT   cells.
XX
PS   Example 3; Fig 12C; 127pp; English.
XX
CC   AAT04915-T04922 are oligonucleotide primers and probes used for the
```

CC amplification and sequencing of mammalian stem cell factor (SCF). Non-
CC naturally occuring SCF and C-terminally truncated polypeptides, having
CC amino acid sequences sufficiently duplicative of naturally ocurring SCF,
CC stimulate growth of primitive progenitors such as haematopoietic
CC progenitor cells, neural stem cells and primordial germ stem cells. The
CC peptides can be used in a composition for treating leucopenia, anaemia or
CC thrombocytopenia, for enhancing engraftment of bone marrow during
CC transplantation or for bone marrow recovery after chemotherapy or
CC radiation-induced bone marrow aplasia or myelosuppression. They can also
CC be used for treating neoplasia, nerve damage, infertlilty, intestinal
CC damage or myeloproliferative disorders. Antibodies may be raised against
CC the peptides for use in detection or neutralisation of SCF in serum. SCF
CC may be useful for the treatment of AIDS and severe combined
CC immunodeficiency (SCID) states alone or in combination with other factors
CC such as IL-7. (Updated on 25-MAR-2003 to correct PF field.)

PT Production of hematopoietic cells suitable for administration to a
PT subject using progenitor cells and expanding the cells using stem cell
PT factor.
XX
PS Example 3; Fig 12C; 123pp; English.
XX
CC A method has been developed of making haematopoietic cells suitable for
CC administration to a subject. The method comprises: (a) obtaining
CC haematopoietic progenitor cells from a donor; and (b) expanding the cells
CC by adding to the cells a haematopoietically effective dose of a
CC polypeptide product having at least part of the primary structural
CC confirmation and one or more of the biological properties of naturally
CC occurring stem cell factor (SCF). The method is useful for stimulating
CC primitive progenitor cells including early haematopoietic progenitor
CC cells which are capable of maturing to erythroid, megakaryocyte,
CC granulocyte, lymphocyte and macrophage cells. SCF results in absolute
CC increases in haematopoietic cells of both myeloid and lymphoid lineages.
CC SCF is useful for treating haematopoietic disorders. The method is useful
CC for expanding early haematopoietic progenitors in syngeneic, allogeneic
CC or autologous bone marrow transplant. SCF is useful for enhancing the
CC efficiency of gene therapy based on transfecting haematopoietic stem
CC cells. SCF is also useful for combating the myelosuppressive effects of
CC anti-HIV drugs such as AZT and for enhancing haematopoietic recovery
CC after acute blood loss and as a boost to the immune system for fighting
CC neoplasia (cancer). The present sequence represents a universal
CC oligonucleotide which is used in an example from the present invention

PT Enhancing efficiency of transfer of polynucleotide into a target
PT mammalian cell in vitro, involves exposing cell that expresses a stem
PT cell factor receptor to stem cell factor, and introducing polynucleotide
PT into cell in vitro.
XX
PS Example 3; Fig 12C; 210pp; English.
XX
CC The present invention describes a method for enhancing (E) the efficiency

CC of transfer of a polynucleotide (I) into a target mammalian cell (II) in
CC vitro, comprising exposing (II) that expresses a stem cell factor (SCF)
CC receptor to a biologically active SCF, its analogue or fragment, which
CC induces cell proliferation, and introducing (I) to (II) in vitro.
CC Exposure of SCF to (II) results in increased uptake of (I) into the cell.
CC The method is useful for enhancing the efficiency of the transfer of a
CC polynucleotide into a target mammalian cell in vitro. The method is
CC useful in gene therapy techniques. AAH41301 to AAH41364 and AAB98351 to
CC AAB98390 represent sequences used in the exemplification of the present
CC invention

PT   Increasing the number of early hematopoietic progenitor cells in the
PT   peripheral blood useful for the treatment of blood disorders including
PT   Hodgkin's disease comprises the administration of human stem cell factor.
XX
PS   Example 3; Fig 12C; 210pp; English.
XX
CC   The present sequence for universal PCR primer 220-3 is 1 of 19 PCR
CC   primers (AAS10435-AAS10453) used to amplify various portions of the human
CC   SCF cDNA sequence. The sequence is described in an invention relating to
CC   novel stem cell factors, the polynucleotides encoding them and methods
CC   for producing the stem cell factors. The methods involve increasing the
CC   number of early haematopoietic progenitor cells in human peripheral blood
CC   by administering a haematopoietically effective human stem cell factor
CC   polypeptide. The methods are useful for the treatment of blood disorders,
CC   including myelofibrosis, myelosclerosis, osteopetrosis, metastatic
CC   carcinoma, acute leukaemia, multiple myeloma, Hodgkin's disease,
CC   lymphoma, Gaucher's disease, Niemann-Pick disease, refractory anaemia,
CC   malaria, vitamin B12 and folic acid deficiency, hypopigmentation
CC   disorders i.e. piebaldism and viral induced disorders, including AIDS

PT   Novel non-naturally-occurring stem cell factor polypeptide, useful for
PT   treating leucopenia, thrombocytopenia, anemia and for enhancing
PT   engraftment of bone marrow during transplantation in a mammal.
XX
PS   Example 3; Fig 12C; 217pp; English.
XX
CC   The present invention relates to novel non-naturally-occurring stem cell
CC   factor (SCF) polypeptides having an amino acid sequence sufficiently
CC   duplicative of that of naturally-occurring SCF to allow possession of
CC   haematopoietic biological activity of naturally occurring SCF. Sequences
CC   of the invention are useful for treating leucopaenia, thrombocytopaenia,
CC   anaemia and for enhancing bone marrow recovery in treatment of radiation,
CC   engraftment of bone marrow during transplantation in mammals and chemical
CC   or chemotherapeutic induced bone marrow aplasia or myelosuppression. They
CC   are also useful for treating acquired immune deficiency in a human, nerve
CC   damage, neoplasia, infertility, myeloproliferative disorder, intestinal
CC   damage in a mammal. SCF sequences are useful for preparing biologically
CC   active polymer polypeptide adduct, for enhancing transfection of early
CC   haematopoietic progenitor cells with a gene, and transfer of a gene into
CC   a mammal. They are useful for treating myelofibrosis, myelosclerosis,
CC   osteopetrosis, metastatic carcinoma, acute leukaemia, multiple myeloma,
CC   Hodgkin's disease, lymphoma, Gaucher's disease, Niemann-Pick disease,
CC   Letterer-Siwe disease, refractory erythroblastic anaemia, Di Guglielmo
CC   syndrome, congestive splenomegaly, Kala azar, sarcoidosis, primary
CC   splenic pancytopaenia, disseminated fungus disease, malaria, military
CC   tuberculosis, Fulminating septicaemia, pyridoxine deficiency, vitamin B12
CC   and folic acid deficiency, Diamond Blackfan anaemia, hypopigmentation
CC   disorders such as piebaldism, AIDS (acquired immune deficiency syndrome)
CC   and vitiligo. The present sequence is a PCR primer which is used for
CC   amplifying the 5' end of rat SCF cDNA. This sequence is used in the
CC   exemplification of the invention

PT   Production of a human stem cell factor (SCF) polypeptide for treating
PT   disorders involving blood cells, such as leukemia, comprises culturing
PT   mammalian cells comprising non-human SCF promoter DNA linked to DNA
PT   encoding the human SCF.
XX
PS   Example 3; Fig 12C; 120pp; English.
XX
CC   The present invention relates to novel stem cell factors (SCFs),
CC   polynucleotide sequences encoding the SCFs, and methods of producing
CC   them. SCFs are involved in the blood-forming (haematopoietic) system in
CC   mammals, particularly humans. The method of the invention is useful for
CC   the production of human SCF. The stem cell factors are useful to treat
CC   disorders involving blood cells e.g. metastatic carcinoma, acute
CC   leukaemia, multiple myeloma, Hodgkin's disease, lymphoma, refractory
CC   erythroblastic anaemia, miliary tuberculosis, disseminated fungus
CC   disease, malaria, and vitiligo. The present sequence representing a
CC   universal oligonucleotide for SCF DNA is used in the examples of the
CC   present invention

PT   New non-natural stem cell factor, useful for treating e.g. leucopenia or
PT   immune deficiency, also related nucleic acid and antibodies.
XX
PS   Disclosure; SEQ ID NO 32; 217pp; English.
XX
CC   The invention relates to stem cell factor (SCF) polypeptides with
CC   haematopoietic activity and the polynucleotides encoding them. The
CC   polypeptides are used for treating infertility, intestinal damage,
CC   myeloproliferative disorders, leucopenia, thrombocytopenia or anaemia,
CC   for improving engraftment of bone marrow transplants, for enhancing bone
CC   marrow recovery after radiotherapy or chemotherapy and in treatment of
CC   immune deficiency, neoplasia, nerve damage, osteoporosis, metastatic
CC   carcinoma, leukaemia and miliary tuberculosis. The SCF polypeptides are
CC   also used to expand haematopoietic progenitor cells for transplantation
CC   and to prepare such cells for transfection with a gene. The SCF
CC   polynucleotides can be used for recombinant expression of the
CC   polypeptides and also as probes for mapping of the SCF gene, for
CC   identifying SCF-related diseases and as a marker for neighbouring genes.
CC   Antibodies raised against the polypeptides are useful in diagnosis and to
CC   remove SCF from blood. This sequence represents SCF related DNA of the
CC   invention.

PT   disorder.
XX
PS   Claim 3; SEQ ID NO 1991; 555pp; English.
XX
CC   The invention describes a new antisense compound, having a sequence
CC   comprising 8-30 bp targeted to a nucleic acid encoding endothelial
CC   specific molecule-1 (ESM-1), that specifically hybridises with the
CC   nucleic acid ESM-1 and inhibits its expression. Also described are: a
CC   composition; inhibiting the expression of ESM-1 in cells or tissues; and
CC   treating an animal having a disease or condition associated with ESM-1.
CC   The compound is useful for preparing a composition for treating diabetes,
CC   cancer, ischaemia or reperfusion injury, or angiogenic, immunological,
CC   cardiovascular or neurological disorder. This sequence represents an
CC   antisense oligonucleotide that can be used to modulate expression of
CC   endothelial specific molecule-1 (ESM-1).

CC   The present sequence represents a chimeric antisense oligonucleotide
CC   targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The
CC   human mPGES-1 gene is located on chromosome 9, more specifically to
CC   9q34.3. The present invention also describes: (1) antisense compounds,
CC   having a sequence comprising 8-30 bp targeted to a nucleic acid encoding
CC   mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and
CC   inhibits its expression; (2) a method of inhibiting the expression of
CC   mPGES-1 in cells or tissues; and (3) a method of treating an animal
CC   having a disease or condition associated with mPGES-1. MPGES-1 chimeric
CC   antisense oligonucleotides and antisense compounds have cytostatic,
CC   antidiabetic, immunomodulator, cardiant, neuroprotective,
CC   antiinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic,
CC   ophthalmological, immunomodulatory and cardiovascular activities, and can
CC   be used as mPGES-1 inhibitors and in gene therapy. The antisense compound
CC   can be used for preparing a composition for treating a disease or
CC   condition associated with mPGES-1 e.g., inflammation, Alzheimer's
CC   disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or
CC   ophthalmic, immunological, cardiovascular or neurological disorder.

PT   Preparing a human stem cell factor (SCF) polypeptide, useful for treating
PT   hematopoietic disorders, e.g., aplastic anemia, comprises growing host
PT   cells transformed or transfected with DNA encoding a human SCF.
XX
PS   Example 3; SEQ ID NO 32; 210pp; English.
XX
CC   The invention relates to preparing a (vertebrate) human stem cell factor
CC   (SCF) polypeptide comprising growing host cells transformed or
CC   transfected with DNA encoding a human SCF that stimulates growth of
CC   haematopoietic progenitor cells under nutrient conditions, the DNA being
CC   operatively linked to an expression control sequence, and isolating the
CC   polypeptide produced. Also included is a recombinant host cell
CC   transformed or transfected with an expression construct comprising a
CC   vertebrate SCF polypeptide-encoding DNA operatively linked to a
CC   heterologous expression regulatory sequence, permitting the expression of
CC   the vertebrate SCF polypeptide in the host cell. Disclosed as new are rat
CC   and human nucleic acids encoding SCF, SCF proteins from a number of other
CC   mammals and recombinantly expressed SCF protein fragments. The DNA
CC   sequences are useful for effecting the large scale synthesis of SCF by a
CC   variety of recombinant techniques or for generating new and useful viral
CC   and circular plasmid DNA vectors, new and useful transformed and
CC   transfected prokaryotic and eukaryotic host cells, and new and useful
CC   methods for cultured growth of such host cells capable of expression of
CC   SCF and its related products. The DNA sequences are also useful as
CC   labelled probes in isolating human genomic DNA encoding SCF, in methods
CC   of protein synthesis, in genetic therapy in humans and other mammals, and
CC   in developing transgenic mammalian species which may serve as eukaryotic
CC   hosts for production of SCF and SCF products in quantity. The SCF is
CC   useful for treating haematopoietic disorders, e.g., aplastic anaemia,
CC   paroxysmal nocturnal haemoglobinuria, myelofibrosis, myelosclerosis,
CC   osteopetrosis, metastatic carcinoma, acute leukaemia, multiple myeloma,
CC   Hodgkin's disease, lymphoma, Gaucher's disease, Niemann-Pick disease,
CC   Letterer-Siwe disease, refractory erythroblastic anaemia, Di Guglielmo
CC   syndrome, congestive splenomegaly, Kala awar, sarcoidosis, primary
CC   splenic pancytopaenia, miliary tuberculosis, disseminated fungus disease,
CC   Fulminating septicaemia, malaria, vitamin B 12 and folic acid deficiency,
CC   pyridoxine deficiency, Diamond Blackfan anaemia, and hypopigmentation
CC   disorders such as piebaldism and vitiligo. The SCF are also useful for
CC   treating neurological damage, infertility states, intestinal damage
CC   resulting from irradiation or chemotherapy, and AIDS. SCF is also useful
CC   for enhancing haematopoietic recovery after acute blood loss and as a
CC   boost to the immune system for fighting neoplasia (cancer). The present
CC   sequence is a universal SCF PCR primer used in the isolation of SCF DNA.

PT New antisense oligonucleotides encoding mitoNEET, useful for modulating
PT mitoNEET expression or for treating diseases associated with mitoNEET,
PT e.g. diabetes, immunological disorders or cardiovascular disorders.
XX
PS Claim 4; SEQ ID NO 273; 226pp; English.
XX
CC The invention comprises antisense oligonucleotides that are targeted to
CC the nucleic acids encoding a family of human proteins from mitochondrial
CC membranes, which bind insulin sensitising, antidiabetic
CC thiazolodinediones (referred to as: mitoNEET). The antisense
CC oligonucleotides of the invention are useful for modulating mitoNEET
CC expression and for treating diseases or conditions associated with
CC mitoNEET, such as: diabetes, immunological disorders, cardiovascular
CC disorders including hypertension, neurological disorders, and
CC ischaemia/reperfusion injuries. The present DNA sequence represents a
CC mitoNEET-specific antisense oligonucleotide of the invention. NOTE: The
CC present sequence is a 2'-methoxyethyl (2'-MOE) gapmer with a
CC phosphorothioate backbone.

PT   Determining the concentration of a target nucleic acid, useful e.g. for
PT   detecting genetic mutations, comprises using a fluorescently labeled
PT   probe in which emission is reduced by binding to the target nucleic acid.
XX
PS   Example 6; Page 23; 55pp; English.
XX
CC   The invention relates to the determination of the concentration of a
CC   nucleic acid target, using a fluorescently labeled probe which produces
CC   reduced fluorescence emission when hybridised to the target nucleic acid.
CC   The method comprises measuring the reduction in emission caused by
CC   hybridisation. The new method is particularly used to quantify target
CC   nucleic acids by a real-time polymerase chain reaction, e.g. for
CC   quantifying microbial cells in co-cultures or symbiotic systems, for
CC   detecting gene mutations or polymorphisms, and for analysing melting
CC   curves of target nucleic acids to determine a Tm value. Methods of the
CC   invention allow target nucleic acids to be quantified quickly, easily and
CC   accurately. Particularly there is no need to remove unbound probe, and no
CC   materials are introduced that inhibit amplification by Taq polymerase (so
CC   conventional PCR conditions can be used). The specificity of PCR is kept
CC   high (amplification of primer dimers is delayed), and the limit of
CC   quantitation is reduced. Complex probes are not needed, and amplification
CC   can be monitored in real time. The working graph for data analysis
CC   (automatically generated by a computer) has a higher correlation
CC   coefficient than conventional graphs so more accurate quantitation is
CC   possible. The current sequence represents a synthetic
CC   deoxyribooligonucleotide that was used for investigating the effects of
CC   the number of G(s) in each target nucleic acid, and the number of G(S) in
CC   its corresponding invention nucleic acid probe

PT Pharmaceutical composition for treating ailments associated with impaired
PT respiration, has oligo(s) antisense to specific gene(s) or its
PT corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
PT ubiquinone.
XX
PS Disclosure; SEQ ID NO 3860; 872pp; English.
XX
CC The invention relates to a novel pharmaceutical composition, which has a
CC first active agent comprising an oligonucleotide antisense to the
CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
CC junctions of genes encoding a polypeptide associated with lung and/or
CC nasal airway dysfunction and a second active agent comprising an
CC antiinflammatory steroid and ubiquinone. A composition of the invention
CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
CC immunosuppressive, and cytostatic activity. The composition may have a
CC use in antisense gene therapy. The composition is useful for treating or
CC preventing a respiratory, lung or malignant disease or condition, also
CC for enhancing the prophylactic or therapeutic respiratory effect of an
CC antiinflammatory steroid in a subject, for reducing or depleting levels
CC of, or reducing sensitivity to adenosine, reducing levels of adenosine
CC receptor, producing bronchodilation, increasing levels of ubiquinone or
CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
CC lung inflammation, lung allergies, or a respiratory disease or condition.
CC Note: The sequence data for this patent is not represented in the printed
CC specification, but was obtained in electronic format directly from WIPO

PT Pharmaceutical composition for treating asthma, has antisense
PT oligonucleotide containing less percentage of adenosine, targeted to
PT nucleic acids associated with lung airway or lung dysfunction, and
PT bronchodilating agent.
XX
PS Claim 15; SEQ ID NO 3860; 763pp; English.
XX
CC This invention describes a novel composition (a) a first active agent,
CC comprising oligonucleotides, effective for alleviating
CC bronchoconstriction, respiratory tract inflammation, allergies and
CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC surfactant depletion or hyposecretion, when administered to a mammal. The
CC oligonucleotides are derived from a gene encoding or regulating
CC expression of a target polypeptide associated with lung airway or lung
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC The invention also describes a kit, that comprises: (a) a delivery
CC device, in separate containers, (b) the oligonucleotides, (c)
CC instructions for adding a carrier and for use of the kit. The composition
CC of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC beta-adrenergic agonist. The composition is useful for preventing or
CC treating a respiratory, lung or malignant disease. The administered
CC composition comprises oligo and is administered to reduce the production
CC or availability, or to increase the degradation of the target mRNA or to
CC reduce the amount of target polypeptide present in the lungs. The
CC pulmonary obstruction, and/or bronchoconstriction and/or lung
CC inflammation, allergies and/or surfactant hypoproduction are associated
CC with a disease or condition such as pulmonary vasoconstriction,
CC inflammation, allergies, asthma, impeded respiration, respiratory
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
CC transplantation rejection, pulmonary infections, bronchitis or cancer.
CC The reduced adenosine content of the anti-sense oligos corresponding to
CC thymidines present in the target RNA serves to prevent the breakdown of
CC the oligonucleotides into products that free adenosine into the system
CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
CC prevent any unwanted effects due to it

PT   New antisense compound targeted to a nucleic acid molecule encoding
PT   mammalian glucocorticoid receptor, useful for treating diabetes, obesity,
PT   cardiovascular disorder, hyperlipidemia or Cushing's syndrome.
XX
PS   Claim 4; SEQ ID NO 4234; 985pp; English.
XX
CC   The invention comprises an antisense oligonucleotides that are targeted
CC   to nucleic acids encoding a mammalian glucocorticoid receptor. The
CC   antisense oligonucleotides of the invention are useful for preventing or
CC   delaying infection, inflammation or tumour formation. The antisense
CC   oligonucleotides are also useful for treating diabetes, obesity,
CC   cardiovascular disorders, hyperlipidaemia or Cushing's syndrome. The
CC   present DNA sequence represents an antisense oligonucleotide that targets
CC   the human glucocorticoid receptor gene. NOTE: The present sequence
CC   contains 2'-methoxyethyl (2'-MOE) wings and a phosphorothioate backbone.

PT with Nav1.3, e.g. pain, seizure disorder such as childhood seizure
PT disorder, or ataxia.
XX
PS Claim 4; SEQ ID NO 1981; 417pp; English.
XX
CC The present invention relates to an antisense compound targeted to a
CC nucleic acid molecule encoding Nav1.3, where the antisense compound
CC specifically hybridizes with and inhibits the expression of Nav1.3. The
CC compound and composition are useful for treating a disease or condition
CC associated with Nav1.3, e.g. pain including but not limited to
CC neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain,
CC diabetic neuropathy, trigeminal neuropathy, arthritic pain, acute pain,
CC pain from burns, migraine headache, cluster headache, mild-to-moderate
CC headache; seizure disorder such as childhood seizure disorder, including
CC but not limited to neonatal or infantile epilepsy; or ataxia. The present
CC sequence represents a chimeric phosphorothioate oligonucleotide with
CC 2'MOE wings and a deoxy gap. Used during the antisense inhibition of
CC human Nav1.3 expression, the oligonucleotides are designed to target
CC different regions of the human Nav1.3 RNA.

PS Claim 4; SEQ ID NO 433; 132pp; English.
XX
CC The present sequence represents a chimeric antisense oligonucleotide
CC targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The
CC human mPGES-1 gene is located on chromosome 9, more specifically to
CC 9q34.3. The present invention also describes: (1) antisense compounds,
CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding
CC mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and
CC inhibits its expression; (2) a method of inhibiting the expression of
CC mPGES-1 in cells or tissues; and (3) a method of treating an animal
CC having a disease or condition associated with mPGES-1. MPGES-1 chimeric
CC antisense oligonucleotides and antisense compounds have cytostatic,
CC antidiabetic, immunomodulator, cardiant, neuroprotective,
CC antiinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic,
CC ophthalmological, immunomodulatory and cardiovascular activities, and can
CC be used as mPGES-1 inhibitors and in gene therapy. The antisense compound
CC can be used for preparing a composition for treating a disease or
CC condition associated with mPGES-1 e.g., inflammation, Alzheimer's
CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or
CC ophthalmic, immunological, cardiovascular or neurological disorder.

PT Sorting single-stranded nucleic acid, useful for analyzing expression
PT patterns and screening active agents, uses capture agent with variable
PT and constant regions.
XX
PS Example; Page 5; 8pp; German.
XX
CC This invention describes a novel method for sorting single-stranded
CC nucleic acids by isolation and hybridisation of nucleic acid pools, then
CC reading out, where the nucleic acids are selectively bound using capture
CC agents that are (a) immobilised on the surface of a solid matrix and (b)
CC comprise variable and non-variable regions. The capture oligonucleotides
CC have a 5'-invariable anchor region, the complement of which is present at
CC least once in each nucleic acid and a 3'-variable, discriminatory region
CC that comprises all possible combinations of up to 10 nucleotides to allow
CC binding of particular sorts of single stranded nucleic acids. The capture
CC agents are particularly locked nucleic acids (LNA) and the anchor region
CC comprises a sequence of 10-50, particularly 15-25, T residues. The
CC capture oligonucleotides are biotinylated and immobilised on a surface by
CC interaction with streptavidin. The matrix is of plastic, ceramic, glass,
CC metal, resin, gel, crystalline material and/or membrane, having semi-
CC conducting properties and especially in the form of a chip. Its surface
CC is particularly a layer of (bio)molecular filaments and binding of single
CC stranded nucleic acids to the surface is (quasi)covalent, supramolecular,
CC physical, stimulated by an electrical field or through a molecular sieve.
CC The method is used (i) for analysis of patterns, especially in mucosal,
CC hair root, blood, nerve or germ cells and (ii) for determining the
CC activity of pharmaceuticals and/or nutritional compounds, e.g. food
CC additives or supplements, especially minerals, trace elements, organic
CC acids (amino, carboxylic or fatty acid) or their derivatives, salts and
CC mixtures. The method provides rapid, inexpensive and reproducible
CC representation of differences in pools of nucleic acids from cells. It
CC allows imaging of the complete pattern of all nucleic acid in a cell, and
CC can detect very small differences in the nucleic acid pool. Since the
CC method is based on comparison of nucleic acid pools, not individual
CC genes, matrix miniaturisation is possible. ADK01281-ADK01344 represent
CC capture probes used in the method of the invention.

PT   Analysis of cDNA and gene expression - by amplification of mRNA followed
PT   by digestion with restriction enzymes.
XX
PS   Disclosure; Page 8; 11pp; Japanese.
XX
CC   A method for the analysis of cDNA comprises (a) preparing an aggregate of
CC   double-stranded cDNAs by using an aggregate of mRNAs and a plural type of
CC   labelled reverse transcription primers (GENESEQ files AAQ75547-Q75798)
CC   and using the aggregate of mRNAs as the template for each reverse
CC   transcription primer; (b) digesting each of the prepared aggregates of
CC   the double-stranded cDNAs with restriction enzyme and; (c)
CC   electrophoresing the digested aggregate of cDNAs in seperate lanes. The
CC   method can be used to analyse gene expression rapidly and easily

PT   Sorting single-stranded nucleic acid, useful for analyzing expression
PT   patterns and screening active agents, uses capture agent with variable
PT   and constant regions.
XX
PS   Example; Page 5; 8pp; German.
XX
CC   This invention describes a novel method for sorting single-stranded
CC   nucleic acids by isolation and hybridisation of nucleic acid pools, then
CC   reading out, where the nucleic acids are selectively bound using capture
CC   agents that are (a) immobilised on the surface of a solid matrix and (b)
CC   comprise variable and non-variable regions. The capture oligonucleotides
CC   have a 5'-invariable anchor region, the complement of which is present at
CC   least once in each nucleic acid and a 3'-variable, discriminatory region
CC   that comprises all possible combinations of up to 10 nucleotides to allow
CC   binding of particular sorts of single stranded nucleic acids. The capture
CC   agents are particularly locked nucleic acids (LNA) and the anchor region
CC   comprises a sequence of 10-50, particularly 15-25, T residues. The
CC   capture oligonucleotides are biotinylated and immobilised on a surface by
CC   interaction with streptavidin. The matrix is of plastic, ceramic, glass,
CC   metal, resin, gel, crystalline material and/or membrane, having semi-
CC   conducting properties and especially in the form of a chip. Its surface
CC   is particularly a layer of (bio)molecular filaments and binding of single
CC   stranded nucleic acids to the surface is (quasi)covalent, supramolecular,
CC   physical, stimulated by an electrical field or through a molecular sieve.
CC   The method is used (i) for analysis of patterns, especially in mucosal,
CC   hair root, blood, nerve or germ cells and (ii) for determining the
CC   activity of pharmaceuticals and/or nutritional compounds, e.g. food
CC   additives or supplements, especially minerals, trace elements, organic
CC   acids (amino, carboxylic or fatty acid) or their derivatives, salts and
CC   mixtures. The method provides rapid, inexpensive and reproducible
CC   representation of differences in pools of nucleic acids from cells. It
CC   allows imaging of the complete pattern of all nucleic acid in a cell, and
CC   can detect very small differences in the nucleic acid pool. Since the
CC   method is based on comparison of nucleic acid pools, not individual
CC   genes, matrix miniaturisation is possible. ADK01281-ADK01344 represent
CC   capture probes used in the method of the invention.

PT Recombinant vaccinia virus containing fusion HIB gag gene - for
PT production in host cells of gag protein for use as vaccine.
XX
PS Example 1; Page 66; 84pp; Japanese.
XX
CC AAV35388-V35414 are primers used in a method which results in a
CC recombinant vaccinia virus comprising of a gag gene from a retrovirus
CC such as HIV-1 or HIV-2, fused to a DNA fragment containing an epitope
CC region (30-300 bases in length) of a retroviral gene other than the gag
CC gene. The gag gene may be altered so as to produce a gag protein modified
CC from the natural sequence by the addition, deletion or substitution of at
CC least 1 amino acid residue. The fusion gene is inserted into a region of
CC a vaccinia virus not essential to its propagation, to give a recombinant
CC vaccinia virus vector which is used to transform a host cell (such as
CC HeLa, Vero, VEF, rabbit kidney RK13 or human myeloma TK-143 cells). Upon
CC culturing the host cell produces particulate structures containing the
CC fusion gag protein. The recombinant vaccinia virus or the fusion gag
CC protein particles may be used in the production of vaccines for
CC protecting against infection with retroviruses such as HIV

PT   Sorting single-stranded nucleic acid, useful for analyzing expression
PT   patterns and screening active agents, uses capture agent with variable
PT   and constant regions.
XX
PS   Example; Page 5; 8pp; German.
XX
CC   This invention describes a novel method for sorting single-stranded
CC   nucleic acids by isolation and hybridisation of nucleic acid pools, then
CC   reading out, where the nucleic acids are selectively bound using capture
CC   agents that are (a) immobilised on the surface of a solid matrix and (b)
CC   comprise variable and non-variable regions. The capture oligonucleotides
CC   have a 5'-invariable anchor region, the complement of which is present at
CC   least once in each nucleic acid and a 3'-variable, discriminatory region
CC   that comprises all possible combinations of up to 10 nucleotides to allow
CC   binding of particular sorts of single stranded nucleic acids. The capture
CC   agents are particularly locked nucleic acids (LNA) and the anchor region
CC   comprises a sequence of 10-50, particularly 15-25, T residues. The
CC   capture oligonucleotides are biotinylated and immobilised on a surface by
CC   interaction with streptavidin. The matrix is of plastic, ceramic, glass,
CC   metal, resin, gel, crystalline material and/or membrane, having semi-
CC   conducting properties and especially in the form of a chip. Its surface
CC   is particularly a layer of (bio)molecular filaments and binding of single
CC   stranded nucleic acids to the surface is (quasi)covalent, supramolecular,
CC   physical, stimulated by an electrical field or through a molecular sieve.
CC   The method is used (i) for analysis of patterns, especially in mucosal,
CC   hair root, blood, nerve or germ cells and (ii) for determining the
CC   activity of pharmaceuticals and/or nutritional compounds, e.g. food
CC   additives or supplements, especially minerals, trace elements, organic
CC   acids (amino, carboxylic or fatty acid) or their derivatives, salts and
CC   mixtures. The method provides rapid, inexpensive and reproducible
CC   representation of differences in pools of nucleic acids from cells. It
CC   allows imaging of the complete pattern of all nucleic acid in a cell, and
CC   can detect very small differences in the nucleic acid pool. Since the
CC   method is based on comparison of nucleic acid pools, not individual
CC   genes, matrix miniaturisation is possible. ADK01281-ADK01344 represent
CC   capture probes used in the method of the invention.

PS   Example; Page 13; 34pp; English.
XX
CC   AAR62941 and AAR62942 are examples of synthetic immunoreactive peptides.
CC   They are used in a method for detecting an antigen in a subject. The
CC   method involves binding the antigen to a solid support and then reacting
CC   it with an immunoreactive ligand (L) bound to an oligo; removing any
CC   unreacted L, and then detecting the presence of the oligo. A similar
CC   method can be used to detect Abs, in which case the ligand is an oligo-
CC   labelled Ag. The use of an amplifiable oligo as the label allows Ag or Ab
CC   to be detected at very low levels. An exemplary olgi is AAQ75024 which
CC   can be covalently attached by the 5'- terminus to the N- or C-terminal of
CC   a synthetic peptide. For LCR using oligo AAZ75024, oligos 1-4 (see
CC   AAQ75027-Q75030) can be used. (Updated on 25-MAR-2003 to correct PN
CC   field.)

PT   Nucleic acid molecule modulating VEGF receptor(s) gene expression or mRNA
PT   stability - useful for treating e.g. tumour angiogenesis, psoriasis,
PT   rheumatoid arthritis, etc., in a human patient.
XX
PS   Claim 4; Page 79; 218pp; English.
XX
CC   The present invention describes nucleic acid molecules which modulate the
CC   synthesis, expression and/or stability of a mRNA encoding 1 or more
CC   receptors of vascular endothelial growth factor (VEGF). A patient
CC   (preferably human) having a condition associated with the level of the
CC   fms-like tyrosine kinase 1 (flt-1), kinase insert domain containing
CC   receptor (KDR) and/or foetal liver kinase 1 (flk-1) (e.g. tumour
CC   angiogenesis, ocular diseases, psoriasis and rheumatoid arthritis) can be
CC   treated by administering the nucleic acid molecule or the expression
CC   vector to the patient. AAX67275 to AAX75752 represent specific examples
CC   of nucleic acid molecules from the present invention

PT   New short interfering nucleic acid, useful e.g. for treatment and
PT   diagnosis of obesity or diabetes, downregulates expression of the
PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 427; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

PT Kit for diagnozing and treating T-cell associated diseases e.g.
PT autoimmune, degenerative nervous system and infectious disease, comprises
PT nucleic acid primers specifically priming and allowing amplification of a
PT Vbeta gene.
XX
PS Disclosure; SEQ ID NO 544; 164pp; English.
XX
CC The invention relates to a kit for diagnosing and treating T-cell
CC associated diseases which comprises a panel of nucleic acid primers
CC specifically priming and allowing amplification of each Vbeta gene,
CC VbetaRNA or cDNA. The kit is useful for diagnosing organ transplant
CC rejection and diagnosing and treating T-cell associated diseases
CC including autoimmune diseases, degenerative nervous system diseases,
CC graft versus host disease, hypersensitivity diseases, infectious diseases
CC and neoplastic diseases. Autoimmune diseases include Addison's disease,
CC atrophic gastritis. Degenerative nervous system diseases include multiple

```
CC   sclerosis and Alzheimer's disease. Hypersensitivity diseases include Type
CC   I hypersensitivities such as contact with allergens that lead to
CC   allergies, Type II hypersensitivities such as those present in
CC   Goodpasture's syndrome and Type IV hypersensitivities such as those
CC   manifested in leprosy. Infectious diseases include viral infections
CC   caused by viruses such as HIV, fungal infections such as those caused by
CC   the yeast genus Candida, parasitic infections such as those caused by
CC   schistosomes, filaria and bacterial infections such as those caused by
CC   Mycobacterium. Neoplastic diseases include lymphoproliferative diseases
CC   such as leukaemias, lymphomas and cancers such as cancer of the brain,
CC   breast. The present sequence represents a Vbeta gene repeat sequence.

PT   Sensitively detecting proximity changes in a system that utilizes an
PT   interacting fluorophore and quencher, for high sensitivity applications,
PT   involves utilizing a metal surface as quencher.
XX
PS   Example 3; Page 30; 62pp; English.
XX
CC   The present sequence is that of a perfectly matched target sequence for a
CC   molecular beacon comprising an oligonucleotide probe (see ABL57069)
CC   covalently attached at the 3' end to fluorescent dye and at the 5' end to
CC   a nanoparticle. In the native state, the probe forms a hairpin
CC   conformation with hybridised termini. The proximity of the fluorophore
CC   and quencher (gold nanoparticle) in the molecular beacon results in
CC   little or no detectable fluorescence. Upon hybridisation of the central
CC   complementary stretch of the probe to a target sequence, such as the
CC   present sequence, the hairpin undergoes a conformational change resulting
CC   in an increase in fluorescence, the extent of which is proportional to
CC   the amount of target sequence present. Single mismatches can be detected.
CC   The invention relates generally to the use of metal surface quenchers
CC   such as particles or films for high sensitivity applications in, for
CC   example, detection and diagnostic systems

PT   Screening of candidate binding partners for binding to test molecule
PT   comprises illuminating sample with light beams and measuring physical
PT   properties of nonlinear optical light beam emanating from sample.
XX
PS   Disclosure; SEQ ID NO 2; 58pp; English.
XX
CC   The invention describes screening a candidate binding partner by
CC   illuminating the sample with light beams at fundamental frequencies to
CC   binding partners, and measuring physical properties of a nonlinear
CC   optical light beam emanating from sample. On binding to the test molecule
CC   the properties change relative to that in absence of exposure of the test
CC   molecule. The invention is used in the screening of candidate binding
CC   partners for binding to test molecule. This sequence represents a
CC   molecular beacon analogue, an exemplary test molecule of the invention.

CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

PT   New short interfering nucleic acid, useful e.g. for treatment and
PT   diagnosis of obesity or diabetes, downregulates expression of the
PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 228; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

PT   New short interfering nucleic acid, useful e.g. for treatment and
PT   diagnosis of obesity or diabetes, downregulates expression of the
PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 255; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
```

CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

XX
PS Example 3; SEQ ID NO 101; 139pp; English.
XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

PT   New short interfering nucleic acid, useful e.g. for treatment and
PT   diagnosis of obesity or diabetes, downregulates expression of the
PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 176; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

PT   New short interfering nucleic acid, useful e.g. for treatment and
PT   diagnosis of obesity or diabetes, downregulates expression of the
PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 261; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

XX
PS Example 3; SEQ ID NO 540; 139pp; English.
XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

PT   New short interfering nucleic acid, useful e.g. for treatment and
PT   diagnosis of obesity or diabetes, downregulates expression of the
PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 114; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

XX
PS Example 3; SEQ ID NO 414; 139pp; English.
XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 564; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
```

CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

PT   New short interfering nucleic acid, useful e.g. for treatment and
PT   diagnosis of obesity or diabetes, downregulates expression of the
PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 248; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

PT   New short interfering nucleic acid, useful e.g. for treatment and
PT   diagnosis of obesity or diabetes, downregulates expression of the
PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 89; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

PS   Example 3; SEQ ID NO 244; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
```

```
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

PS Example 3; SEQ ID NO 388; 139pp; English.
XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

PT   New short interfering nucleic acid, useful e.g. for treatment and
PT   diagnosis of obesity or diabetes, downregulates expression of the
PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 496; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

XX
PS Example 3; SEQ ID NO 577; 139pp; English.
XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

XX
PS Example 3; SEQ ID NO 57; 139pp; English.
XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

PT   New short interfering nucleic acid, useful e.g. for treatment and
PT   diagnosis of obesity or diabetes, downregulates expression of the
PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 81; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

XX
PS Example 3; SEQ ID NO 164; 139pp; English.
XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

PT stearoyl-CoA desaturase gene.
XX
PS Example 3; SEQ ID NO 398; 139pp; English.
XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 97; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

PT   New short interfering nucleic acid, useful e.g. for treatment and
PT   diagnosis of obesity or diabetes, downregulates expression of the
PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 194; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is

PT   New short interfering nucleic acid, useful e.g. for treatment and
PT   diagnosis of obesity or diabetes, downregulates expression of the
PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 154; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

XX
PS Example 3; SEQ ID NO 262; 139pp; English.
XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

PS Example 3; SEQ ID NO 528; 139pp; English.
XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

PT diagnosis of obesity or diabetes, downregulates expression of the
PT stearoyl-CoA desaturase gene.
XX
PS Example 3; SEQ ID NO 55; 139pp; English.
XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

PT   New short interfering nucleic acid, useful e.g. for treatment and
PT   diagnosis of obesity or diabetes, downregulates expression of the
PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 216; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

PT New short interfering nucleic acid, useful e.g. for treatment and
PT diagnosis of obesity or diabetes, downregulates expression of the
PT stearoyl-CoA desaturase gene.
XX
PS Example 3; SEQ ID NO 481; 139pp; English.
XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

PT New short interfering nucleic acid, useful e.g. for treatment and
PT diagnosis of obesity or diabetes, downregulates expression of the
PT stearoyl-CoA desaturase gene.
XX
PS Example 3; SEQ ID NO 548; 139pp; English.
XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

PT   New short interfering nucleic acid, useful e.g. for treatment and
PT   diagnosis of obesity or diabetes, downregulates expression of the
PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 92; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

PT   New short interfering nucleic acid, useful e.g. for treatment and
PT   diagnosis of obesity or diabetes, downregulates expression of the
PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 242; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 193; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 264; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

PT   New short interfering nucleic acid, useful e.g. for treatment and
PT   diagnosis of obesity or diabetes, downregulates expression of the
PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 396; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
```

```
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

PS Example 3; SEQ ID NO 462; 139pp; English.
XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.

PT   New short interfering nucleic acid, useful e.g. for treatment and
PT   diagnosis of obesity or diabetes, downregulates expression of the
PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 72; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

PT   stearoyl-CoA desaturase gene.
XX
PS   Example 3; SEQ ID NO 275; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

PS   Example 3; SEQ ID NO 433; 139pp; English.
XX
CC   The present invention describes a short interfering nucleic acid (siNA)
CC   that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC   by RNA interference. Also described: (1) modulating expression of SCD
CC   genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC   kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC   complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC   siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC   virucide activities. The siNAs can be used to modulate expression of SCD
CC   genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC   diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC   They can also be used for drug screening; diagnosis; target
CC   identification and validation; genetic engineering; pharmacogenomics;
CC   studying gene function and gene mapping (e.g. of single-nucleotide
CC   polymorphisms). The present sequence represents an SCD siNA, which is
CC   used in the exemplification of the present invention.

XX
PS Example 3; SEQ ID NO 501; 139pp; English.
XX
CC The present invention describes a short interfering nucleic acid (siNA)
CC that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CC genes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC identification and validation; genetic engineering; pharmacogenomics;
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
CC used in the exemplification of the present invention.
